List of Abbreviation

[Abbreviation/Term] - [Definition]

1 Introduction

This template is not mandatory, it only presents one of the possible typographic formatting that meets the requirements for the final work.

A base letter is required for the base text, such as Cambria. The font size of the base text is set to 11 or 12 points. Rowing is allowed to a maximum of 1.5.

Use italics to highlight important words in the text, only in bold fonts in particularly justified cases. The desired text alignment method is "in block", word splitting is usually not turned on, but is not a defect. For introducing words as in the previous sentence, we use the quotation marks, i.e. at the beginning "and at the end".

Chapters List of Literature, List of Tables (or Images and Schemes), List of Abbreviations and List of Appendices not to be numbered, other headings yes, by Arabic numerals separated by dots at lower heading levels as shown on previous page.

Note that the headings are assigned styles named Heading 1, Heading 2, and Heading 3 (depending on the heading level). We strongly recommend that you create headlines using the styles, as this will make it easier for you to further process your work electronically. More than three levels of headings are not used.

Headlines (i.e., Heading 1 style) should begin with a new page.

For the base text there are styles called Paragraph 1 and Next paragraphs. The style "Paragraph 1" is without an indentation and is used for the first paragraph under a heading, image or quote. The style "Next paragraphs" has an indentation and is used for the other paragraphs except the first one.

Keep a uniform look at the tables and charts.

At the end of the work, add the list of tables, charts, schemas, and images.
