

## **Appendix 1 – Description and use of analytical methods**

### **Quantitative analysis**

For the quantitative part, we pre-processed the data in three steps. First, we used MorphoDiTa lemmatization and part-of-speech tagging, which converts words into their original form and identifies basic word features (Hajič, 2004; Straková et al., 2014). We then removed from the corpus the most common English stop-words and all punctuation and numeric information (Liu, 2011). Finally, we removed all words apart from nouns, verbs, and adjectives, as these bear most of the meaning. This is a useful approach to limit the complexity of quantitative text analysis (Quinn et al., 2010).

The analysis then focused predominantly on frequencies, which provide patterns of word occurrence and co-occurrence in the corpus. The frequency of words is a first indication of topics appearing in the corpus. Moreover, co-occurrence of words within the set unit of meaning (in our case, a sentence) indicates which themes appear together (Krippendorff, 2013). In the first step, we created a list of most frequent words, taking the subset of the top 1,000 terms. We paired these terms with document publication year information to account for the temporal development. In the same manner we also computed the frequencies of the most commonly occurring collocations, yielding a list of the 1,000 most frequent bigrams (two-word phrases) and their occurrence over time. In the second step, we scanned through the relevant literature (see Section 2) and the data corpus itself and identified energy-relevant word pairs and analyzed their frequency of occurrence over time. To better estimate the usage of energy-related terms within the corpus, we normalized the occurrence frequencies based on the length of the documents published each year.

### **Qualitative content analysis**

The qualitative content analysis uses the inductive coding approach (Corbin & Strauss, 2015; Krippendorff, 2013). Building on the results of the quantitative exploration, the whole corpus was searched using the keyword “energy” and the context of each occurrence was read closely (Smith et al., 1999). Repeatedly occurring themes, i.e. patterns of meaning (Pan & Kosicki, 1993), were identified and turned into mutually-exclusive codes. The codes were kept at the minimal level of abstraction in order to capture the full thematic range of the corpus (Saldaña, 2016). After this stage, codes were organized into more general categories in a process called axial coding (Rivas, 2012), thereby forming a code scheme (see Table 1, expanded version with examples of coded texts can be found in Appendix 4).

The corpus was then entered into the Discourse Network Analyzer (DNA) coding software (Leifeld, 2012) and coded. During the coding procedure, those parts of the corpus including the keyword “energy” were again closely read and text segments corresponding to the identified codes were marked accordingly (Krippendorff, 2013; Wesley, 2014). The codes were not treated as mutually exclusive, i.e. one statement could have been coded multiple times if

it conveyed multiple recognized patterns of meaning. Along with that, additional information on the document such as date of production were recorded as metadata. After finishing the coding process, these metadata were used to capture the temporal variation in code occurrences and to provide quick insight into the coded segments. To further differentiate the results of the quantitative and qualitative exploration, only the text segments that conveyed substantial meaning were coded. Thus, the instances in which phrases associated with energy cooperation were mentioned only as a label or keyword were not included in the analysis. Such instances typically include bullet point lists such as “The Prime Ministers agreed on the main areas of common interest (policy towards the countries of Eastern Europe with emphasis on Belarus, the eastern dimension of the ENP, energy security) and on the strengthening of cooperation in this format.” (The Visegrad Group, 2008a) The resulting contrast between the sheer frequency of a term’s occurrence and the frequency of instances in which it conveys some meaning then provide additional input for interpretations.

In line with Wood and Kroger (2000), Arber *et al.* (2008), and Ocelík and Osička (2014), two researchers participated on the coding procedure and one additional researcher was involved in resolving disagreements between the coders. All three researchers were involved in the process of the data collection and interpretation, thus, were in the role of expert coders.

### **Frame analysis**

Frame analysis (Goffman, 1974; Hajer, 1995) builds on the dataset developed during the qualitative content analysis (Section 4.2). It utilizes the insights gained from close reading of the corpus and repeated reading of the coded segments, and zooms out to capture the coherent narratives (frames) through which the Platform gives sense to the most pressing issues of its communication. The frame analysis was conducted pursuant to Entman (1993). Specifically, it addresses three of Entman’s four frame functions as represented by the following questions: What is identified as the main problem in the issue? Which causes are recognized? What solutions are suggested?

## **Appendix 2 – Corpus description**

This appendix provides an overview of documents included in the corpus. We provide statistics disaggregated at the year level. The **Error! Reference source not found.** contains two types of information – number of documents and number of words. We provide both total number of documents per year, as well as number of documents per year and document type.

We provide three different metrics on number of words – overall word count before pre-processing (used in qualitative analysis), word count after the pre-processing (used in quantitative analysis), and average word count per document (average document length).

The table shows clearly there are fluctuations in number of documents, as well as documents missing. These fluctuations are caused by the data availability and inconsistency of data publishing by the Visegrad Group. There are two missing annual reports (2002 and 2007). In 2011, the annual report of the Slovak presidency consisted of two documents. The presidency programme from 2000 was not available as well.

Moreover, the length of documents varies. This is in general caused by the fact that annual reports and presidency programmes are long documents in their nature, while news documents are generally shorter. However, the length news is varying significantly as well. Since some documents are much longer, the scale from 8,000 words is condensed to capture all outliers.

Tab. 1 Basic corpus statistics

Year	Documents	Annual reports	News	Presidency programs	Words before pre-proc.	Words after pre-proc.	Avg. doc. length
2000	2	1	1	0	6846	3546	1773.00
2001	15	1	13	1	16546	8463	564.20
2002	2	0	1	1	4156	2266	1133.00
2003	10	1	8	1	16140	8475	847.50
2004	14	1	12	1	20921	10666	761.86
2005	8	1	6	1	12434	6672	834.00
2006	9	1	7	1	16739	9096	1010.67
2007	16	0	15	1	16318	8873	554.56
2008	16	1	14	1	22609	11621	726.31
2009	15	1	13	1	29702	15821	1054.73
2010	10	1	8	1	25697	13397	1339.70
2011	19	2	16	1	98340	51277	2698.79
2012	14	1	12	1	25118	13382	955.86
2013	17	1	15	1	56345	30162	1774.24
2014	25	1	23	1	76844	40896	1635.84
2015	28	1	26	1	89002	46090	1646.07
2016	16	1	14	1	39480	18130	1133.13
2017	24	1	22	1	51076	27024	1126.00
2018	22	1	20	1	36360	18622	846.45
Total	282	18	246	18	660673	344479	1221.56

### Appendix 3 – List of presidencies

This appendix lists countries, which presided to the Visegrad Group between 2000 and 2018 (**Error! Reference source not found.**). The presidency of the Visegrad Group is rotating and changes each year in July.

Tab. 2 Visegrad presidency

Start	Finish	Presiding country
1999	2000	Czech Republic
2000	2001	Poland
2001	2002	Hungary
2002	2003	Slovakia
2003	2004	Czech Republic
2004	2005	Poland
2005	2006	Hungary
2006	2007	Slovakia
2007	2008	Czech Republic
2008	2009	Poland
2009	2010	Hungary
2010	2011	Slovakia
2011	2012	Czech Republic
2012	2013	Poland
2013	2014	Hungary
2014	2015	Slovakia
2015	2016	Czech Republic
2016	2017	Poland
2017	2018	Hungary
2018	2019	Slovakia

## Appendix 4 – Full coding scheme

Tab. 3 Coding scheme

Category	Code	Specification
Climate policy	Climate_policy	<p>Description of climate policy measures that are being undertaken or considered. Namely supporting further deployment of renewable energy or energy efficiency.</p> <p>Example:  <i>“The V4 Countries stress that energy efficiency is the key element in reducing the CO2 emission. The efficient use of energy has also a big impact on security of supply, job creation and reduction of fuel import dependence. The potential of energy efficiency needs to be exploited.”</i> (The Visegrad Group, 2013b)</p>
	Climate_challenge	<p>Normative statement expressing the need to acknowledge the climate change as a serious political problem.</p> <p>Example:  <i>“There was general consensus among V4 countries that climate change is a common challenge to the EU and the international community and can only be effectively addressed by joint effort of all countries developed and developing alike, [...]”</i> (The Visegrad Group, 2009b)</p>
	RES_support	<p>Normative statement about the need or appropriateness of financial or political support of further deployment of renewable energy.</p> <p>Example:  <i>“The Ministers also agreed that increasing the share of renewable energy sources and increasing energy efficiency are important policy areas for reducing greenhouse gas emissions and that these policies should be supported.”</i> (The Visegrad Group, 2007)</p>
Energy security	Diversification	<p>Description of energy sources or supply routes diversification that are being undertaken or considered.</p> <p>Example:  <i>“[The Slovak presidency will intensify] cooperation with a view to increasing external energy security of</i></p>

		<i>the V4 countries--by interlinking regional energy networks, strengthening the EU Common Energy Policy, and diversifying sources, routes and suppliers of energy and raw materials.” (The Visegrad Group, 2011a)</i>
Diversification_support		<p>Normative statement about the need to diversify energy sources and supply routes.</p> <p>Example:  <i>“The Prime Ministers emphasize that the European Commission should pave the way for diversifying energy sources and routes of its supply to the European Union.” (The Visegrad Group, 2008c)</i></p>
Ensec_challenge		<p>Normative statement expressing the need to acknowledge energy (in)security as a serious political problem.</p> <p>Example:  <i>“The Ministers express their hope that during the Czech and Swedish Presidencies the European Council will give a clear and strong political signal to further implement and develop the European policy on security of energy supplies.” (The Visegrad Group, 2008b)</i></p>
Gas_diversification		<p>Description of gas sources or supply routes diversification that are being undertaken or considered. This is a more specific code to “Diversification”.</p> <p>Example:  <i>“The Hungarian Presidency will organize high-level energy diplomacy meetings and business forums to enhance the political focus on the completion of the North-South Gas Corridor, giving new impulses to the expansion of ongoing infrastructural and market development projects and also opening northern and southern gates for the global energy market.” (The Visegrad Group, 2017)</i></p>
Interconnection		<p>Description of gas sources or supply routes diversification that are being undertaken or considered. This is a more specific code to “Diversification”.</p> <p>Example:  <i>“[The Czech presidency will foster] interconnection of electricity markets between the Czech Republic and Slovakia, promote the introduction of market</i></p>

		<i>coupling in other profiles of V4 Member States and strengthen connections between V4 Member States in relation to neighbouring countries (in particular, all ENTSO-E countries)."</i> (The Visegrad Group, 2011b)
Loop_flows		<p>Description of the situation in which the renewable energy-induced unscheduled flows of electricity jeopardize the stability of electricity grids in the region.</p> <p>Example:  <i>"The growing share of renewable resources in electricity generation, especially when the necessary infrastructure development is lacking, results in loop flows not only provoking considerable social welfare loss but also threatening the secure operation of our interconnected electricity systems."</i> (The Visegrad Group, 2013a)</p>
Oil_diversification		<p>Description of oil sources or supply routes diversification that are being undertaken or considered. This is a more specific code to "Diversification".</p> <p>Example:  <i>"The Visegrad Group reiterates the importance of crude oil pipeline projects of common interest with regard to the security of supply of the region and in order to secure diversification possibilities."</i> (The Visegrad Group, 2013a)</p>
Solidarity		<p>Description of policies adopted or considered with regards to solidarity mechanisms.</p> <p>Example:  <i>"[The Hungarian presidency intends to coordinate] V4 actions aimed at implementation of the new security of Gas Supply regulation cross-border cooperation and solidarity mechanisms."</i> (The Visegrad Group, 2017)</p>
Strategic_reserves		<p>Reference to policies and projects associated with strategic reserves and stocks of energy commodities.</p> <p>Example:  <i>"[The Hungarian presidency intends to analyze] the possibilities of creating common underground gas storage facilities for the V4 countries."</i> (The Visegrad Group, 2009a)</p>
Supply_interruptions		Reference to events of interrupted energy supplies – either to the past incidents or threats in the future.

		<p>Example:  <i>“In the aftermath of the gas crisis in January 2009, the main objective is to ensure security of supply through diversification of sources and transmission routes, also having in mind the need for alternative routes for supplying the region with oil in cases of supply disruption via the Druzhba pipeline.”</i> (The Visegrad Group, 2011a)</p>
EU-V4 relations	Balanced_targets	<p>Normative statement calling for climate targets respecting other energy policy goals (namely security of supply and competitiveness) and reflecting the specific situation in the individual Member States, including their past contributions.</p> <p>Example:  <i>“[The V4+ countries] believe, that the new EU climate framework must be balanced, efficient and adequate, which takes into account the competitiveness of the European economy and the different circumstances of the Member States.”</i> (The Visegrad Group, 2013a)</p>
	Common_market	<p>Reference to the building or completion of the EU’s internal energy market.</p> <p>Example:  <i>“The Ministers confirm that the V4 Countries are in favor of the completion of the internal energy market in the EU by 2014. Any market obstacles should be removed soon and effectively.”</i> (The Visegrad Group, 2013b)</p>
	Energy_mix	<p>Normative statement emphasizing the need for respecting the Member States’ right to choose their own energy mix.</p> <p>Example:  <i>“The V4+ countries also maintain their position that any decision on climate and energy policy must respect that it is the sovereign right of every Member State to freely choose its most suitable energy mix as provided in the Treaty.”</i> (The Visegrad Group, 2015a)</p>
	EU_funds	<p>Reference to the EU financial tools being used for V4 energy projects or a normative call for their allocation there.</p> <p>Example:</p>

		<p><i>“Signatories also agreed to strengthen the region's energy security with a strong and uniform demand towards the existing EU TEN-E funding on common projects as well as to continue their concerted efforts within the framework of the new EU Energy Security and Infrastructure Instrument.”</i> (The Visegrad Group, 2009a)</p>
	Implementation_EU_law	<p>Reference to cooperation on implementing the European energy legislation.</p> <p>Example:  <i>“Moreover, V4 ministers agreed that additional measures, especially regarding timely implementation of the gas projects of common interest and cooperation in implementation of European network codes, are needed to develop V4 gas market and further increase energy security in the region.”</i> (The Visegrad Group, 2015a)</p>
	Liberalization	<p>Reference to market liberalization processes taking place in the V4. Typically includes a call for their continuation or recognizes insufficient liberalization as a trade barrier in the region.</p> <p>Example:  <i>“In the electricity sector, Slovakia proposes cooperation in the implementation of legislative proposals under the 3rd legislative package for the internal market in electricity and gas. The implementation will focus on issues concerning the national regulators, unbundling models, retail markets, and access to gas storage facilities in the gas sector.”</i> (The Visegrad Group, 2011a)</p>
	Shaping_EU_policy	<p>Reference to cooperation on pursuing shared interests in the European Union, typically at Council negotiations.</p> <p>Example:  <i>“The CZ V4 PRES will coordinate the positions of the V4 countries towards the European Commission and EU Council Presidency during the negotiations of legislative proposals in the field of nuclear energy. For this purpose, the Czech Republic will initiate coordination meetings before the sessions of the EU pro-nuclear group and before the EU negotiations on the 2030 climate-energy targets.”</i> (The Visegrad Group, 2015b)</p>

	Technological_neutrality	<p>Normative call for a non-discriminatory approach towards low-carbon energy technologies when drafting climate and energy policies. Typically argues against a narrow focus on RES at the expense of nuclear energy.</p> <p>Example:  <i>"[Polish presidency will promote] the technological neutrality principle with regard to EU energy and climate policy including the Energy Union. Common initiatives to improve market and regulatory conditions for the development of nuclear power in the EU in order to recognize significant contribution of nuclear power in achieving competitive low emission economy."</i> (The Visegrad Group, 2016b)</p>
External relations	External_relations	<p>Reference to the V4 cooperation with non-V4 countries or to the EU external energy policy. Both topic areas are aggregated under one code as they often overlap.</p> <p>Example:  <i>"V4 ministers also welcomed the agreement reached among Ukraine, the Russian Federation and the European Commission on the gas supplies for Ukraine during the current winter period. Given the fact that a secure supply for Ukraine and secure transit of gas via Ukraine is an important precondition for security of gas supply in the V4 region, V4 ministers expect all parties to adhere to the agreement."</i> (The Visegrad Group, 2015a)</p>
	One_voice	<p>Normative statement calling for the EU speaking with one voice when dealing with external participants on energy supply chains.</p> <p>Example:  <i>"We should also speak with one voice on external energy relations. We wish to intensify the EU approach towards energy security and enhance cooperation with our neighbours in the framework of the Energy Community."</i> (The Visegrad Group, 2013a)</p>
Regional market	Competition	<p>Reference to market integration projects and their positive role in increasing competition in energy trade in the region.</p> <p>Example:</p>

		<p><i>The internal market integration together with the V4 market potential are the best incentives for the effective use of existing interconnections and for the development of diversification projects and increasing the level of competition and market liquidity.” (The Visegrad Group, 2013a)</i></p>
	<p>Regional_market</p>	<p>Reference to the V4 energy market integration projects. Typically include the regional gas and electricity markets.</p> <p>Example:  <i>“The Czech Presidency achieved progress in debates on the integration of V4 gas markets and finalized the joint V4 risk assessment. This document, developed during the Slovak Presidency, identifies regional bottlenecks to underline the need to complete the building of the necessary infrastructure in the region.” (The Visegrad Group, 2016a)</i></p>

## Appendix 5 – 1,000 most common words and two-word phrases

This appendix includes table with 1,000 most frequent words (Table 4) and 1,000 most frequent two-word phrases (Table 5). Words and phrases, which were identified as energy-relevant, are highlighted in bold.

Tab. 4 1,000 most common words

Word	Rank	Frequency	Frequency per 1000 words	Occurrence in documents
country	1	5192	15.93	93.3%
