Constipation

Mood Swings

Irritability

Higher body temperature

Low Back Pain

Implantation Bleeding

A Positive Pregnancy Test

Bloating and Weight Gain

Pregnancy Tests

- **When pregnant, the amount of HCG hormone in the body rises rapidly in the early days & weeks**
- **A home pregnancy test can detect this in the urine or blood (the chemical markers)**
- **However, the HCG hormone can only be detected accurately after implantation (there is also a false result if the test is done too early)**

Common test examples
