TO WHOM IT MAY CONCERN:

I am writing this reference for **Dr Magdalena Wiacek**, born in Klodzko (Poland). She has asked me to provide this general letter that she may show to any prospective (employer, school, etc.) who asks her for references. I have known Dr Wiacek from her stay at Rostock University in 2002 to 2004 in my capacity as a PhD student. She took several courses in Biomechanics (basics, biosignal-analysis, biomechanical methodologies- EMG, kinematics, force measurements . . .) from me as well as was involved in lectures in physical education in elderly with students. Her academic performance and involvement in teaching was always of the highest standard required. Her scientific vita was successfully with ten reviewed papers already published and three papers in preparation.

In conclusion, I would highly recommend Dr Wiacek. If her performance in my laboratory is any indication of how she'd perform in her scientific career I am convinced that she will be able to fulfill any scientific and academic task on international level she will be ask to undertake.

With kind regards

Universitätsprofessor. Dr. habil. Volker Zschorlich
(Chair of Movement Science – Biomechanics)
