Waterfall Chart Example - Walkthrough

Assumptions

	Amt.	Cum.
Opening Balance	\$1,000.00	\$1,000.00
Mvmt 1	\$53.17	\$1,053.17
Mvmt 2	\$72.12	\$1,125.29
Mvmt 3	\$85.16	\$1,210.45
Mvmt 4	(\$775.42)	\$435.03
Mvmt 5	(\$853.16)	(\$418.13)
Mvmt 6	\$28.33	(\$389.80)
Mvmt 7	\$977.42	\$587.62
Mvmt 8	\$46.14	\$633.76
Mvmt 9	\$81.12	\$714.88
Mvmt 10	\$12.44	\$727.32
Closing Balance	\$727.32	

Chart Calculations Table

	Op. Bal.	Cl. Bal.	Pos Inv	Pos Dec Vis	Pos Inc Vis	Neg Inv	Neg Dec Vis	Neg Inc Vis
Opening Balance	\$1,000.00							
Mvmt 1			\$1,000.00	-	\$53.17	-	-	-
Mvmt 2			\$1,053.17	-	\$72.12	-	-	-
Mvmt 3			\$1,125.29	-	\$85.16	-	-	-
Mvmt 4			\$435.03	\$775.42	-	-	-	-
Mvmt 5				\$435.03	-	-	(\$418.13)	-
Mvmt 6						(\$389.80)	-	(\$28.33)
Mvmt 7					\$587.62	-	-	(\$389.80)
Mvmt 8			\$587.62	-	\$46.14	-	-	-
Mvmt 9			\$633.76	-	\$81.12	-	-	-
Mvmt 10			\$714.88	-	\$12.44	-	-	-
Closing Balance		\$727.32						

Similar to column M. The distinction in whether the movement is positive or negative is so that positives may be coloured one way and negatives another.

If the particular movement is positive, this takes the previous movement's cumulative balance; if not, it takes the current movement's cumulative balance. In either case, the balance used must be positive.

This is used as an invisible column to 'prop up' the movement that will be displayed.

If the movement is negative, display as a positive number the value closer to zero of the movement and the last movement's cumulative balance.

Together with column I, this will ensure a block appearing to go downwards will not go below the x-axis (i.e. a value of zero).

Similar to column J, if the movement is positive, display as a positive number the smaller of the movement and the current movement's cumulative balance.

Together with column I, this will ensure a block appearing to go upwards will calculate correctly if the previous cumulative balance was negative.

Exactly the opposite of column I, if the particular movement is positive, this takes the current movement's cumulative balance; if not, it takes the previous movement's cumulative balance. In either case, the balance used must be positive.

This is used as an invisible column to 'prop down' the movement that will be displayed.

If the movement is negative, this calculates the amount of the movement that should be displayed below the x-axis (the positive amounts were calculated in columns J and K).
