

INSTRUCTIONS PUBLIC GOODS GAME

The game has 5 rounds. In each round you're given two tokens to split them between your private account and a common account.

The value of a token differs between a token on private and common account.

You'll be given 10 small papers (two for each period).

In each period you decide whether to contribute to a common account (mark the paper with X) or keep a token on private account (keep the paper clean). In each period you can:

- keep both tokens on private account (hand out two clean papers)
- keep one tokens on private account , second on common account (one clean paper and one with X)
- keep both tokens on common account (hand out two papers with X)

During the whole experiment keep track of your decision on decision sheet.

Earnings:

- 2x the # of tokens you keep on private account
- 0,5x total number of tokens on common account

period	A	B	C	D	E
	Value of token on private account	Number of tokens on private account	Earnings of private account (A * B)	Announced earnings of common account	Earnings per period C + D
