

Weka

Praktické použití

Antonín Pavelka

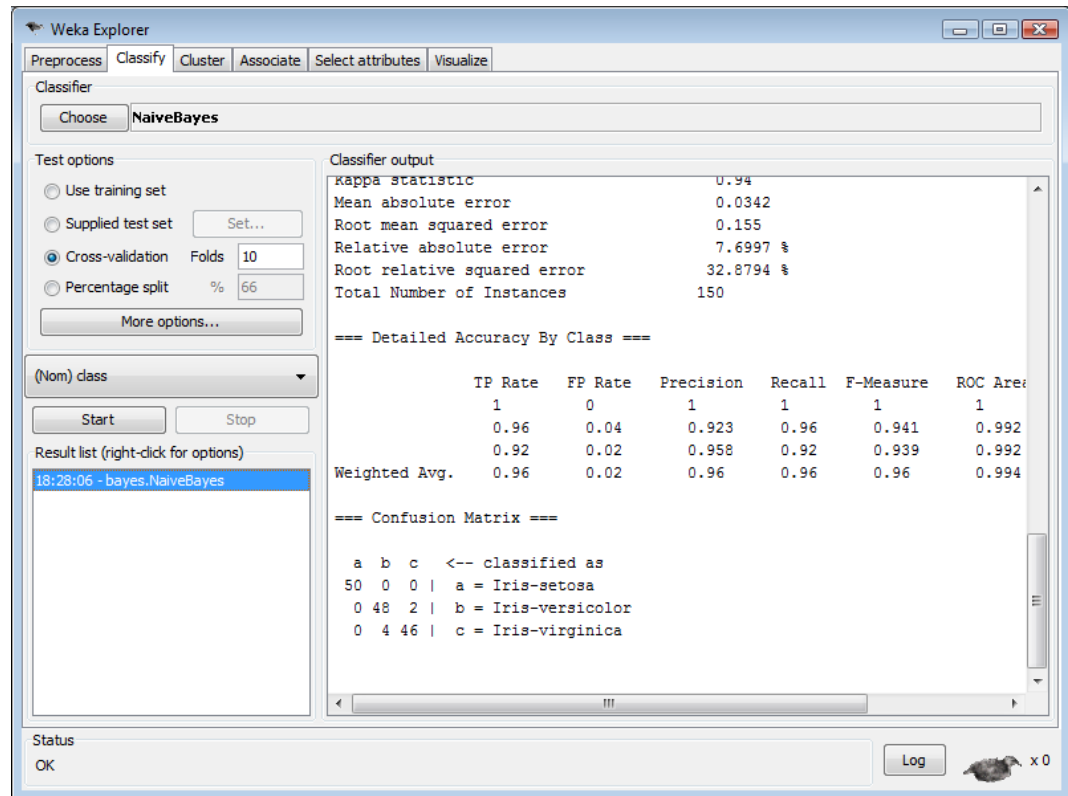

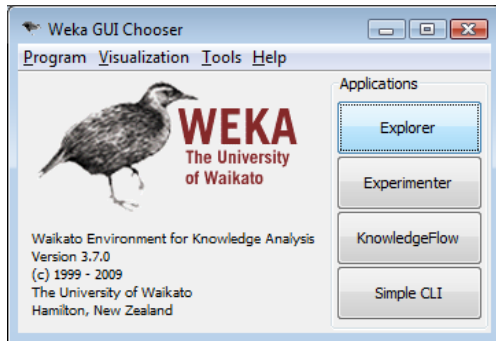

Weka - úvod

- kolekce algoritmů strojového učení pro dolování z dat
- University of Waikato, Nový Zéland
- 1993 TCL/TK, C, Makefiles
- 1997 rozhodnutí přejít na čistou Javu
- integrována
 - RapidMiner
 - Petaho (systém business intelligence)
- GNU General Public License

Ovládání

- spuštění
java -Xmx1024m -jar weka.jar
- grafické rozhraní
 - Explorer – jednotlivé činnosti na kliknutí
 - Experimenter – systematické srovnání
 - Knowledge flow – činnosti jako tok
- příkazový řádek
- Java API

Ukázka – grafické rozhraní ...

... příkazový řádek ...

```
java -classpath weka.jar  
    weka.classifiers.bayes.NaiveBayes  
    -t data/iris.arff
```

... Java API

```
Instances instances = new Instances(  
    new BufferedReader(  
        new FileReader("iris.arff")));  
instances.setClassIndex(instances.numAttributes() - 1);  
  
NaiveBayes c = new NaiveBayes();  
  
Evaluation eval = new Evaluation(instances);  
  
eval.crossValidateModel(c, instances, 10, new Random(1));  
  
System.out.println(eval.toSummaryString());  
System.out.println(eval.toMatrixString());
```

1. Attribute-Relation File Format (ARFF)

ARFF soubor

```
@relation spambase
% spam, non-spam
@attribute word_freq_make real
@attribute 'char_freq_#' real
@attribute {spam, ham}
@data
0,0.64,0.64,spam
0.21,0.28,0.5,spam
0.06,0,0.71,ham
```

Čas

```
@ATTRIBUTE timestamp DATE "yyyy-MM-dd HH:mm:ss"
@DATA "2001-04-03 12:12:12" "2001-05-03 12:59:55"
```

Řídký formát

```
0, X, 0, Y, "class A" → {1 X, 3 Y, 4 "class A"}
0, 0, W, 0, "class B" → {2 W, 4 "class B"}
```

Řetězce

```
@attribute LCC string
@attribute LCSH string

@data
AG5, 'Encyclopedias and dictionaries.;Twentieth century.,
```

Chybějící hodnoty

```
4.4,?,1.5,?,Tolkien
```

2. Předzpracování dat

The screenshot shows the Weka Explorer interface. The 'Preprocess' tab is active. The 'Current relation' section shows 'Relation: deleterious', 'Instances: 4898', 'Attributes: 9', and 'Sum of weights: 4898'. The 'Attributes' list includes PDB, INDEX, FROM, TO, AUTOMUTE (selected), MAPP, SIFT, SNAP, and EFFECT. The 'Selected attribute' section for AUTOMUTE shows 'Name: AUTOMUTE', 'Type: Numeric', 'Missing: 0 (0%)', 'Distinct: 67', and 'Unique: 4 (0%)'. A table of statistics for AUTOMUTE is shown below:

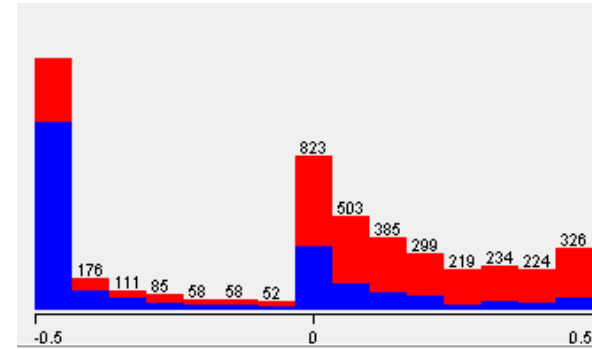

Statistic	Value
Minimum	-0.36
Maximum	0.33
Mean	-0.053
StdDev	0.108

The histogram at the bottom right shows the distribution of the AUTOMUTE attribute. The x-axis ranges from -0.36 to 0.33. The distribution is bimodal, with a peak around -0.1 and another peak around 0.1. The histogram is overlaid with a blue curve and a red curve. The class is set to 'EFFECT (Nom)' and the 'Visualize All' button is visible.

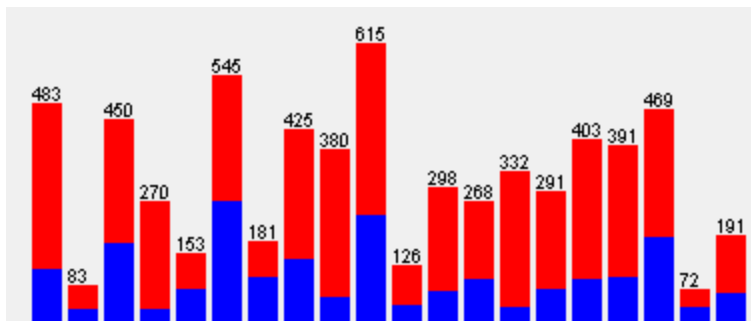

Histogramy

užitečný číselný atribut

podezřelý číselný atribut

20-hodnotový atribut

binární cílový atribut

Filtry

Unsupervised

- Remove -V -R 1-5,8 (V = inverze, zachovej pouze tyto atributy)
- Discretize
 - některé algoritmy nepracují s čísly
 - urychlení
 - někdy i zvýšení přesnosti
- StringToWordVector

Supervised

- Discretize
- AddClassification
- AttributeSelection

Multifilter – aplikuje několik filtrů po sobě

StringToWordVector

- Dumbek's Random Stuff
- Random Stuff
- Stefan Tilkov's Random Stuff
