XML Namespaces

PB138

XML Namespace

- element might be in namespace

  <person xmlns="http://muj.namespace">....

- xmlns puts the element and all its descendant elements into the namespace

XML Namespace

- We may use prefix to have fine control
- Prefix is usable in **the same element** or its descendants

```
<person xmlns="http://muj.namespace"   xmlns:meno="http://muj.jmenny.namespace">
  <meno:name>Filip</meno:name>
</person>
```

Attributes

- Attributes are not put into any namespace by **xmlns**!

Excercise

- Find a method that you can use in JAXP to learn the XML Namespace of a node
