

This assignment assumes only basic web development skills.

Red Hat OpenShift provides basic free account which is enough for integrating large enterprise application with database resources (<https://www.openshift.com/>).

End goal of OpenShift assignment is to have working OpenShift account running an instance of web site.

Under this assignment students are expected to deliver web application in selected programming language (any of the ones OpenShift provides).

Evaluation:

8 points: Setup of git infrastructure required by OpenShift and setup of Application instances

8 points: Web application running in OpenShift

4 points: Creativity of the final solution
