Seminar Group: English Group

Process Description: Course Registration Process

The Course Resources System (CRS) is the online course organization which provides a list of interesting courses to the users. CRS helps to organize courses/lecture or seminar to the specific locations (city, university, study-room, private hall, ...)

In this process, we focus only on the process of course registration. student can request for registration courses which is verified by the system (check user-location, prerequisites, and other conditions) if the verification is ok, then user will get confirmation notification, then user can process payment which been done by the third-party (black-box) for the specific course and date and CRS will update registration into dbms, then the process is ended.

If the verification is not ok, system will generate confirmation message to the user and end the process.

Other tasks for users, it allows login-user to view interesting courses, download material, and update materials.

Please see the business flow process in the next page:
