

Diagram describes process of searching for new trip and creating new reservation in case provider will return some valid results. If customer will accept one of the results and fill payment details, system will reserve flights for him and once payment gate will return success, system will finish the reservation. In case trip is not available during reservation process anymore, system will try to find alternative and provide it to customer. If payment will fail, reservation will be cancelled and customer inform about the payment failure.

Missing requirements:
 Not enough intermediate events -1
 Not enough gateways -1

Result: 6
