

# Drone renting

Customer can order a drone for a flexible time. When the system receives the order, It automatically verifies the payment. If is there any problem the system close the order and notify the customer about the issue by e-mail. Otherwise, the system generates an 8 digit long access code and send it to a delivery boy with the other order details. A delivery boy checks the condition of a particular drone and if it is needed also fixes all related problems. Then he packs the drone into the transport box and delivers the box to the customer selected box in the city. He locks it with the code and goes back to the office after that the system updates order status and send SMS to the customer that the drone is ready.
