Customer support

Customer support

- Printed Profile Form
- Print Users Profile Form
- Until it is printed successfully
- Archive File
- Archiving completed
- 15 min
- Extended archiving time
- Inform manager
- Manager informed

This should be rather modelled as error handling.

Manager

Result: 10.5 out of 12

Custom user registration

Service customers can make registration to the system. Every registration request logs email address. All mandatory registration fields have to be filled correctly and the customer can revise fields. Email address have to be checked for duplicity. If email is already used, the registration is cancelled. If email is unique, the system saves a new user in digital or physical form. When a new user is created, customer support have to print and archive users profile form. If archiving file exceeds 15 mins, then the manager is informed. When a user is saved, the system sends a confirmation email to customer.
