CACHE COVERT CHANNEL : LAB1

1 1 0 1...
EOEO

Task 0 : Whats the Bit Logic, $A > B$ or $B > A$?? is 1

Task 1 : Determine the Comn Rate(Bits/Sec) and BER (Error/1000 Bits)

Task 2: Double the Comn Rate and find BER

Check system cache from following:-

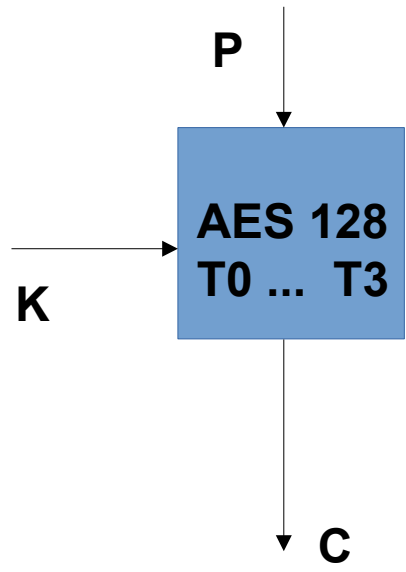

- lscpu
- /sys/devices...

To run the code

```
taskset -c 4 ./receiver <4 distinct set numbers>
```

DRAM

Suppose
($K_0 = 00$ and $k_4 = 50$)

- $P_0 = 0$, all other inputs are random
- Make N time measurements
- Segregate into Y buckets based on value of P_4
- Find average time of each bucket
- Find deviation of each average from overall average (DOM)

$$\langle K_0 \oplus K_4 \rangle = \langle P_0 \oplus P_4 \rangle$$

Task 1 : Run the code for 10 consecutive time and calculate the reduction in entropy. Why does the entropy increase or decrease?

Task 2 : Run the attack on different types of Ubuntu VMs and check the entropy.
