

# PV204 Security technologies LABS

JavaCard programming, Secure Multiparty Computation

Petr Švenda  [svenda@fi.muni.cz](mailto:svenda@fi.muni.cz)  [@rngsec](https://twitter.com/rngsec)

Centre for Research on Cryptography and Security, Masaryk University

**CRCS**

Centre for Research on  
Cryptography and Security

## The masterplan for this lab

- Threshold ECDSA signature (MeeSign tool)
  - Large group, smaller groups
- Brainstorm interesting usages of MPC
- Manage and update JavaCard applications on smartcard

# Secure Multiparty Computation

## Preparation (every student)

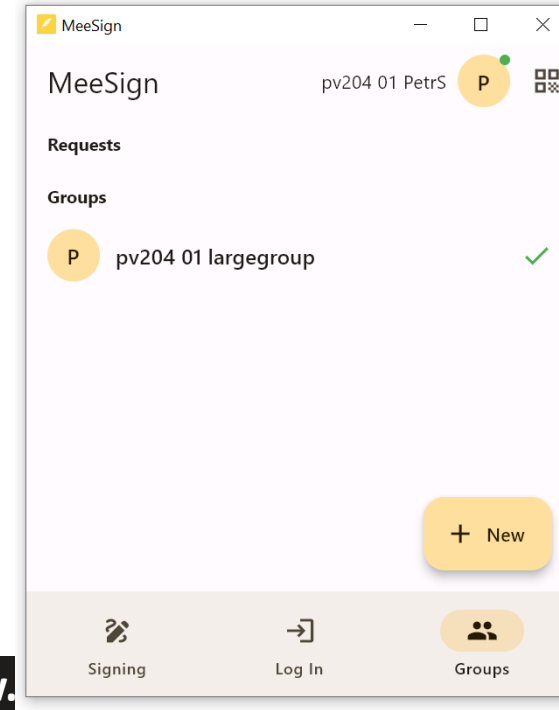

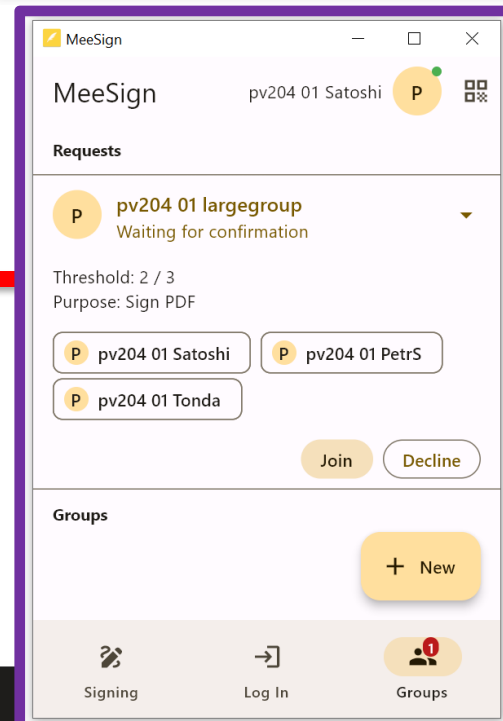

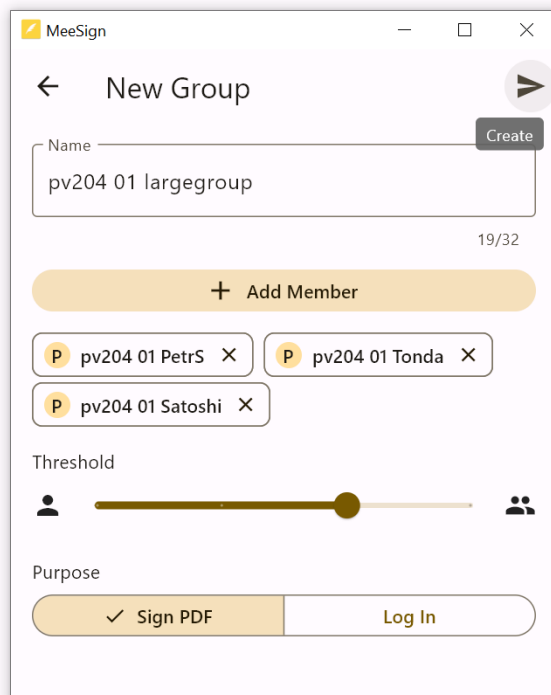

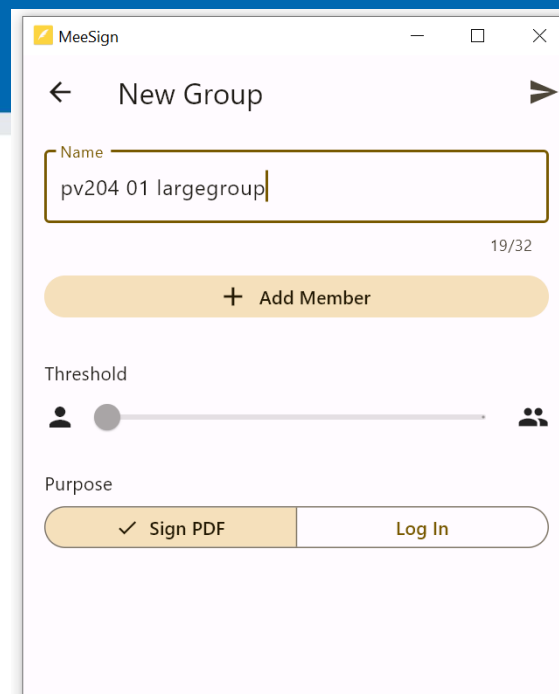

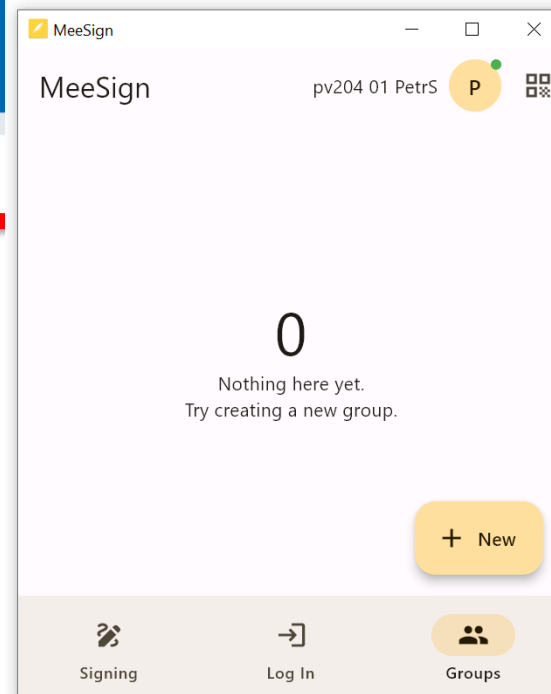

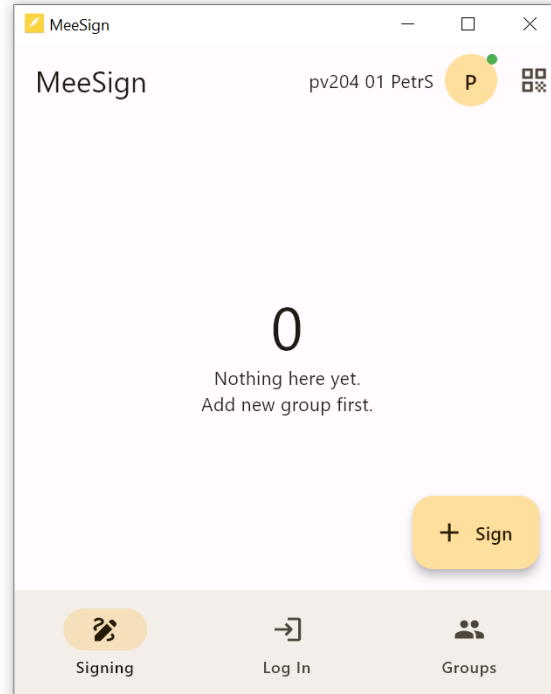

- Download and extract MeeSign client for your platform at <https://meesign.crocs.fi.muni.cz/>
- Connect to university network => wlan-fi or eduroam
- Start MeeSign application
- Check that server is set to `meesign.crocs.fi.muni.cz`
- **!** Set your name as '`pv204 0x your_nick_here`' (replace x by number of your seminar group)
- Click Register

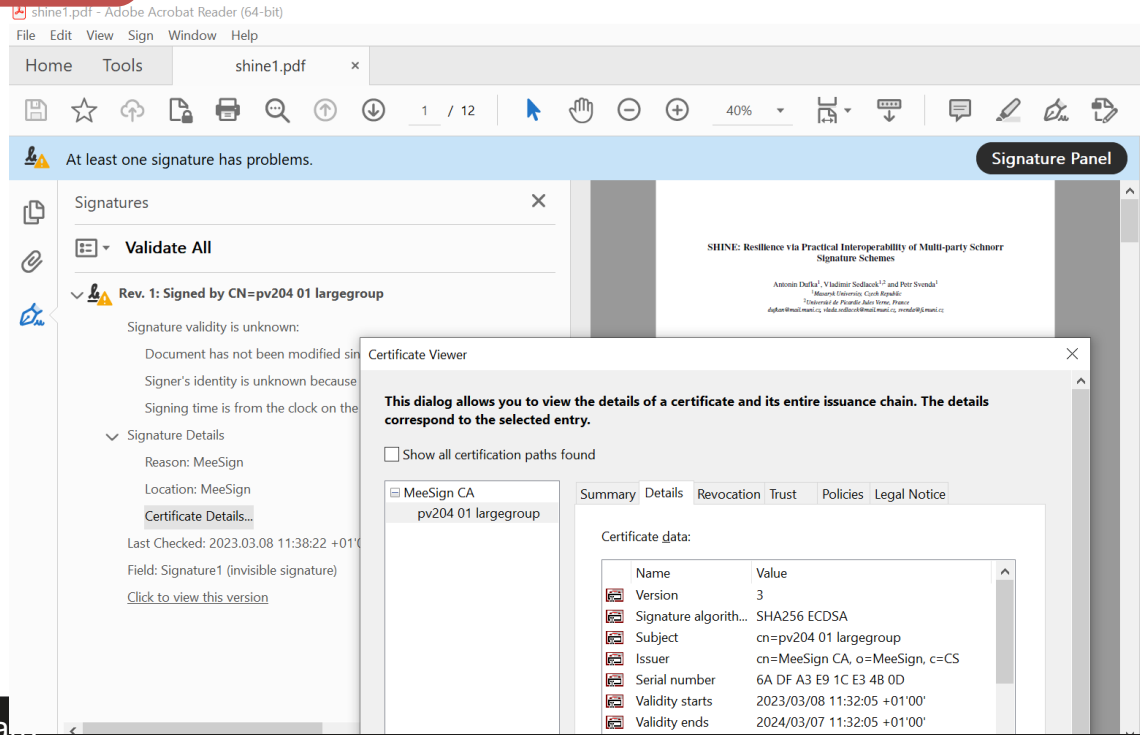

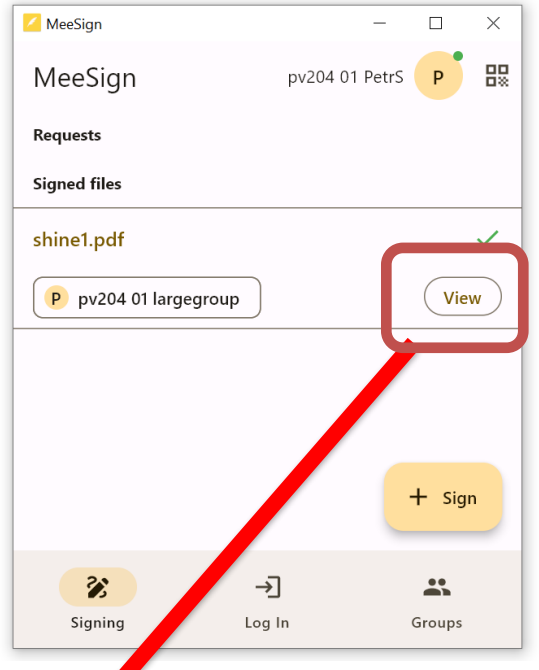

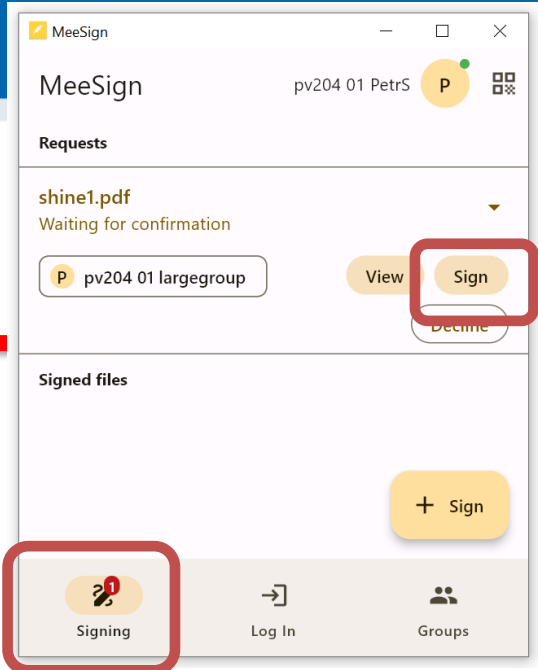

A screenshot of the MeeSign application's registration interface. The window title is "MeeSign". It features a yellow feather logo at the top. Below the logo, the text "MeeSign" is displayed. There are two input fields: "Name" with the value "pv204 01 PetrS" and "Server" with the value "meesign.crocs.fi.muni.cz". A "Register" button is located at the bottom right. The character count "14/32" is visible next to the Name field.

## Task: Signing as a larger group

- New group 'PV204\_0x\_large' created by tutor
  - Threshold set to  $n-2$
  - Students added by nickname (or QRCode)
- Confirm yourself in when prompted
- Tutor starts signing of document, wait for notification
- Open then sign pdf document shared, Sign afterwards
- Wait for the finalization ( $n-2$  people needed)
- Check yourself properties of the resulting MPC signature
  - Adobe Acrobat Reader or <https://ec.europa.eu/digital-building-blocks/DSS/webapp-demo/validation> (upload signed file, Detailed report -> Basic Building Blocks SIGNATURE)

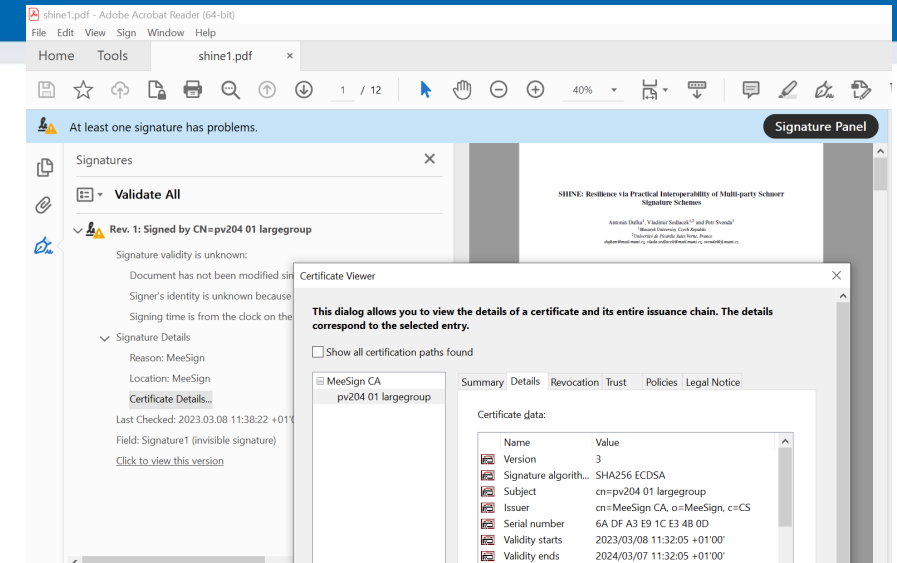

# Verify pdf signature

- Check resulting signature

- Adobe Acrobat Reader

- pdfsig (poppler-utils)

- Online <https://ec.europa.eu/digital-building-blocks/DSS/webapp-demo/validation>

```

$ pdfsig example.pdf
Digital Signature Info of: example.pdf
Signature #1:
- Signer Certificate Common Name: Small Group (Jimmy & Joe)
- Signer full Distinguished Name: CN=Small Group (Jimmy & Joe)
- Signing Time: May 27 2022 09:05:26
- Signing Hash Algorithm: SHA-256
- Signature Type: adbe.pkcs7.detached
- Signed Ranges: [0 - 106317], [125263 - 125849]
- Total document signed
- Signature Validation: Signature is Valid.
- Certificate Validation: Certificate issuer isn't Trusted.

```

**Cryptographic Verification : PASSED**

- Has the reference data object been found? ✓ +
- Is the reference data object intact? ✓ +
- Is the signature intact? ✓

**Signature Acceptance Validation : PASSED**

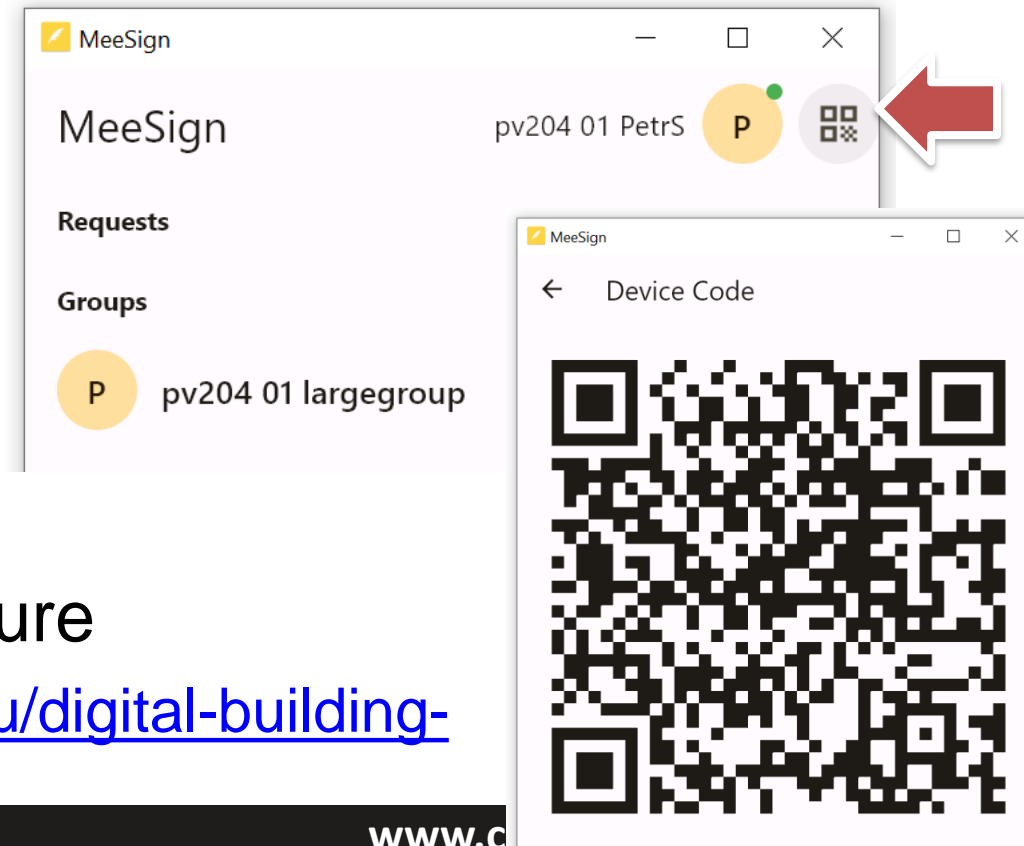

- Is the structure of the signature valid? ✓
- Is the signed attribute: 'signing-certificate' present? !
- Is the signed qualifying property: 'signing-time' present? ✓
- Is the signed qualifying property: 'message-digest' or 'SignedProperties' present? ✓
- Are cryptographic constraints met for the signature creation? ✓ +
- Are cryptographic constraints met for the message digest? ✓ +

## Task: Signing in smaller group

- Groups of 3 students
- Create new group with some unique name, add yourself and peers
  - Try to add peers via qrcode
    - Users display qrcode (upper right corner)
    - Group creator Add member -> Scan
  - Set threshold to 2-of-3
- Initiate MPC signing, sign
- View then sign pdf document
- Check yourself the resulting MPC signature
  - Adobe Acrobat Reader or <https://ec.europa.eu/digital-building-blocks/DSS/webapp-demo/validation>

## Questions

- What is difference between group 2-of-3 and 3-of-3? What is security advantage of the first and second one respectively?
- What if two people from the group refuses to sign?
- How many devices needs an attacker to compromise to forge signatures?
- What is the reason why Adobe Acrobat Reader displays warning about resulting signature?
- What is a public key of your group?

# Task: Brainstorm interesting usages for MPC

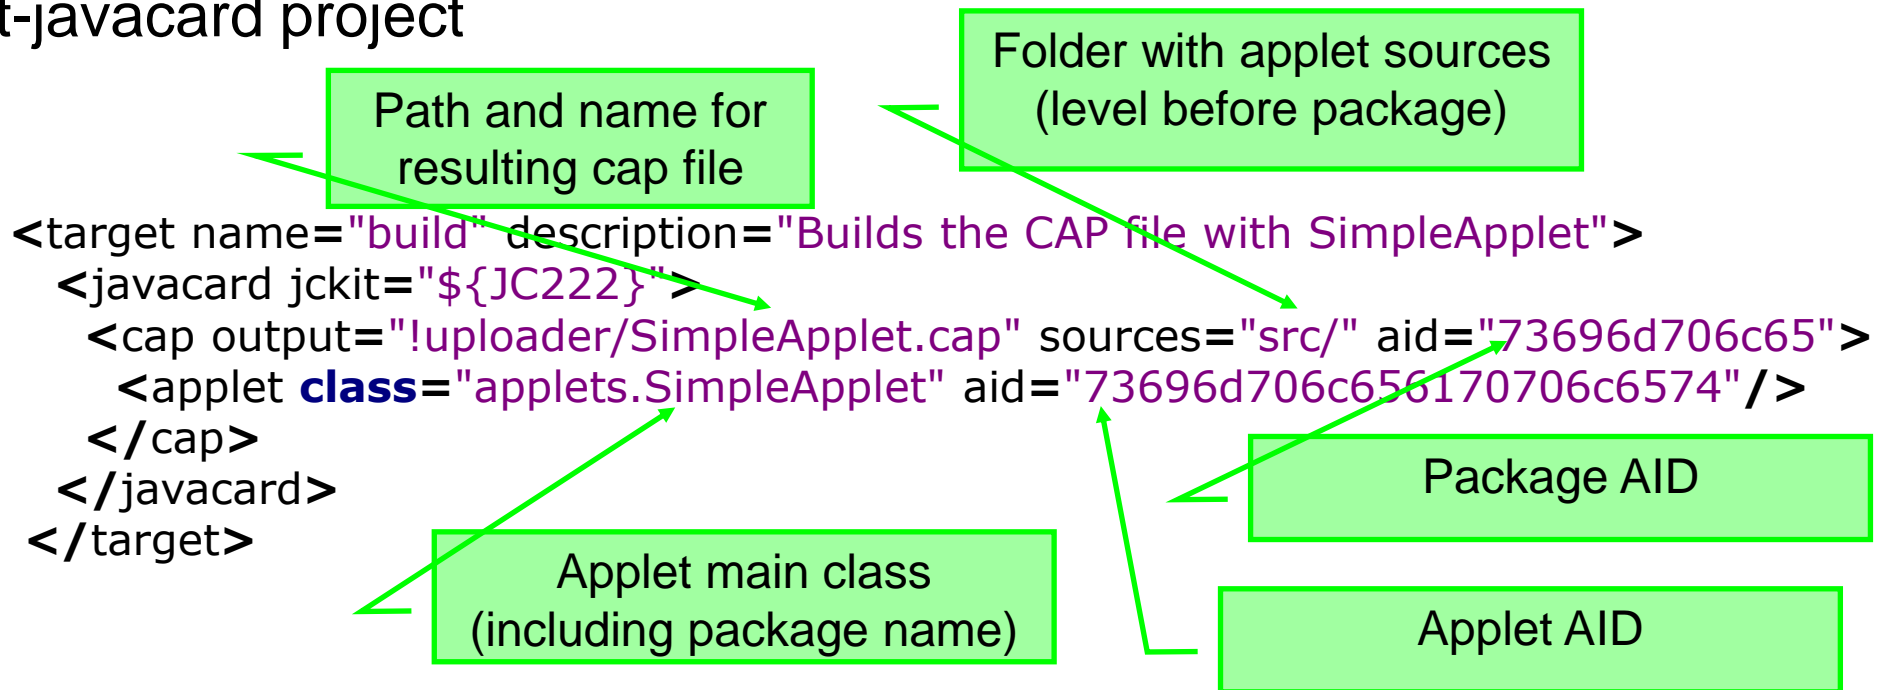

- Form groups of 3 students
- Brainstorm and write into Miro at least three concrete usage scenarios utilizing asymmetric cryptography where MPC can be used (be creative!)
  - [https://miro.com/app/board/uXjVMf66usg=?share\\_link\\_id=424368693160](https://miro.com/app/board/uXjVMf66usg=?share_link_id=424368693160)
  - Goals achieved, threshold configuration
- Pick the most interesting one and elaborate in more details
  - Describe process of group establishment, problems solved, comparison to single key scenario
- Some hints
  - RSA/ECDSA/Schnorr/EdDSA...
  - Document signing, authentication, collaborative decryption, key generation, PKI, single point of failure, unicorns, key distribution, ...
  - k-of-n threshold, combination with secure hardware, temporary signers, cold-storage signers
  - Human participant, automated participant with policy, redundant participants, multiple shares by one participant...

# CONVERSION AND UPLOAD TO REAL CARD

We will compile, convert and install SimpleApplet.cap

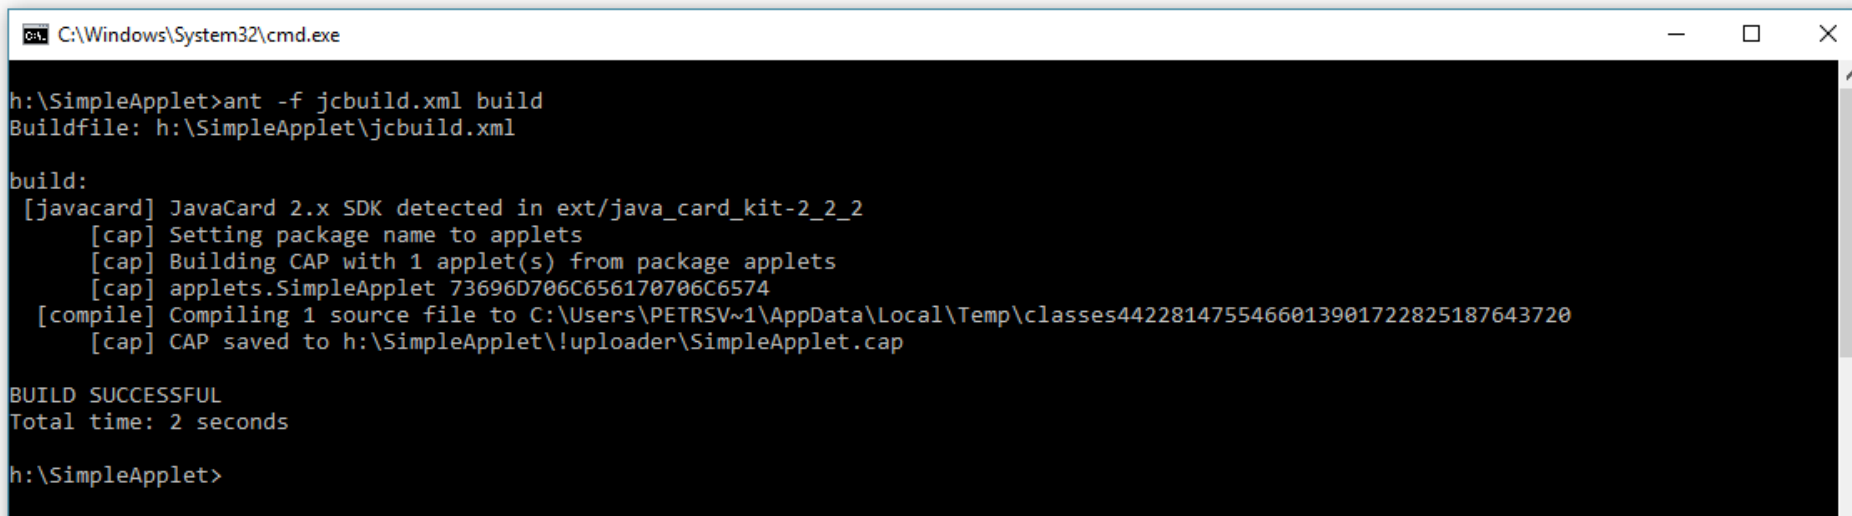

## Task: Create cap file and upload to card

- Navigate to SimpleApplet folder
  - src folder contains applet's source code in SimpleApplet.java
  - `jcbuild.xml` contains configuration for conversion with ant-javacard project

## Task: Create cap file and upload to card

- Compile & Convert
  - Execute on cmd line: `ant -f jcbuild.xml build`

```
C:\Windows\System32\cmd.exe
h:\SimpleApplet>ant -f jcbuild.xml build
Buildfile: h:\SimpleApplet\jcbuild.xml

build:
[javacard] JavaCard 2.x SDK detected in ext/java_card_kit-2_2_2
[cap] Setting package name to applets
[cap] Building CAP with 1 applet(s) from package applets
[cap] applets.SimpleApplet 73696D706C656170706C6574
[compile] Compiling 1 source file to C:\Users\PETRSV~1\AppData\Local\Temp\classes4422814755466013901722825187643720
[cap] CAP saved to h:\SimpleApplet\!uploader\SimpleApplet.cap

BUILD SUCCESSFUL
Total time: 2 seconds

h:\SimpleApplet>
```

- If OK, SimpleApplet.cap is created in !uploader folder

## Task: Create cap file and upload to card

- <http://github.com/martinpaljak/GlobalPlatformPro>

1. List already loaded applets

```
- java -jar gp.jar -list -d
```

2. Uninstall previous version of SimpleApplet

```
- java -jar gp.jar -uninstall SimpleApplet.cap -d
```

3. Install SimpleApplet.cap

```
- java -jar gp.jar -install SimpleApplet.cap -d
```

4. Use applet (commands in SimpleAPDU code)

## Problem: what with other applets on card?

### 1. List already loaded applets

- `java -jar gp.jar -list -d`

### 2. Find package\_AID and run:

- `java -jar gp.jar -deletedeps -delete package_aid`

- The `-deletedeps` will also delete all applets from target package

- E.g., our SimpleApplet can be also removed by

- `gp -deletedeps -delete 73696d706c65`

## Be aware – real card can be blocked

- Too many unsuccessful authentication requests

```
>gp --list -debug

```

## Be aware – real card can be blocked

- Don't write script that executes many authentications at once (cycle, multiple commands)
- If unsuccessful one/two authentication is detected, then as for help, please!!!

## Questions

- How can you list applets and packages available on card?
- How can you prevent people listing applets on your card?
- Why you need to remove applet first before installing updated version?

# ADDING NEW JAVACARD FUNCTIONALITY

We will update, compile, convert and install SimpleApplet.cap

## Tasks: add new “increment” method to applet

- Implement on-card Increment() method
  - All payload bytes from incoming apdu are incremented by one (separately)
  - Resulting array is returned back to host
- Add new constant for instruction INS\_INC
- Add new method void Increment(APDU apdu) and its implementation
  - setIncomingAndReceive(), for loop over array, setOutgoingAndSend()
- Add method call into switch inside process() method
- Debug functionality with simulated card
- Compile, convert and upload updated applet to real card
- Change from simulator to real card
  - runCfg.setTestCardType(RunConfig.**CARD\_TYPE.PHYSICAL**);
- Test functionality using real card

**NO ASSIGNMENT THIS WEEK 😊**
