Fashion NFT generation
 Modern fashion brand organizes non-fungible-token (NFT) generation. Selected registered users can choose NFTs and send a generation request containing what to generate and user's session info that is validated by bot detection. System will verify user's NFT claim and user's session info for bot behavior detection. If actions are deemed bot-like, user is banned and incident report is passed to bot protection team that will analyze it, create action points, send report and concerns to bot protection provider. Otherwise generation will be successful and generated package sent to the user with a bonus of 1 promo NFT for every 7th NFT requested and 1 native token for every 3 NFTs requested. In case of crypto network down the user is notified about 1hour delay and the delivery will be retried in 1 hour.
