

# Assignment 2 - Currency Conversion terminal

Authors: Charles Dube

Creation date: Mar 25, 2023

Page: 1 of 1

Summary/Description of Process:  
 This Diagram shows the process in which a user interacts with a terminal so that they can exchange their hard currency (cash) into another form of hard currency (for example changing Czech Crowns to Euros).  
 The process is simple, initiate the system, choose desired currency conversion, insert your cash and choose desired output currency, scan your ID and after validation collect your cash.  
 Task types are missing -1

When the process is modeled in the pool, then message flow has to enter activity or event not just the pool (-1)

There exists sensors in the terminal that detect if the money inserted into the machine meets standard with expect currency selection. Anti Fraud.

Missing name of the outcome (End event) -1

This is rule event, displaying the message to customer is rather activity.

Improve alignmet of sequence flow.

The process is a little bit weird - it is very passive (it assumes a lot of messages will come from outside).

Result: 9
