JuiceCasting

JuiceCaster: Towards automatic juice filming attacks on smartphones

Weizhi Meng [*], Wang Hao Lee, S.R. Murali, S.P.T. Krishnan

Infocomm Security Department, Institute for Infocomm Research, Singapore

Fig. 2. The high-level architecture of our (automatic) juice filming attacks.

Charging Risks

- Charging smartphones in public spaces is a regular occurrence - airports, cafes, libraries…

- Public charging stations pose a security threat

- Apart from installing malware, undetectable spying is possible

Mobile High-Definition Link

- Released June 2010

- "Industry standard for connecting smartphones to TVs, projectors etc.

- Similar appearance to regular cables

| PB173 charger demonstration

JuiceCasting

- Class of attacks abusing the MHL standard to spy on charging smartphones

- Undetectable

- Secure charging technologies - USB condoms, cables with no data lines…

Demonstration time
