

Mathematics-related words and expressions

The parts of the **How To Read Maths** handout highlighted in yellow are what we expect everybody to know, i.e. they are **compulsory**. (It is true that the document is partly written in Japanese, but it doesn't make it any less useful). This handout is based on How to read figures, mathematical expressions and equations, and word glossary. pdf available at <http://ese.cc.sophia.ac.jp/> and modified.

If you want further information and practice, you can also look at the **Maths Texts** handout (pp. 170-172 from Ardley, Neil. *Dictionary of Science*. 1st American ed., Dorling Kindersley, 1994.)

If you want to check pronunciation of certain terms and expression, you will find the **Mathematical and scientific symbols** site useful.
