

INVESTMENTS IN EDUCATION DEVELOPMENT

# Introduction

PPP – what is it?

SS\* - and what is this?

SS\* + PPPM

# Once upon a time...

Once upon a time there was a company with four employees, named Everyone, Someone, Anybody and Nobody. One day it became necessary to complete an important task.

Everyone was sure that Someone will do it. Anybody could do it, but Nobody did not do it. Someone got angry because it was work for Everyone.

Everyone thought that Anybody could do it but Nobody realized that Everyone will not do it.

In the end, Everyone blamed Someone that Nobody did not do what Anybody could do.

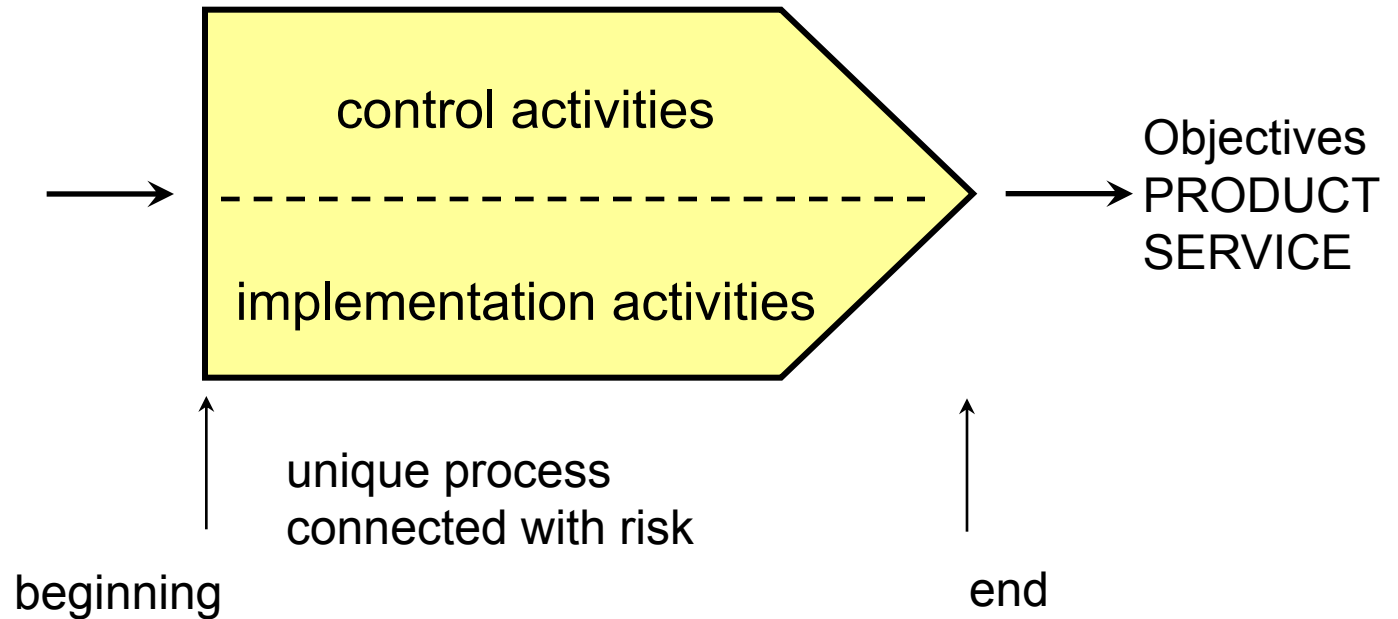

Question to consider:

**FORMULATE YOUR OWN DEFINITION OF  
WHAT A PROJECT IS.**

**Discussion, evaluation**

# What is a project?

Assignment  
Products  
Services  
Information  
Knowledge  
Environment  
Qualification  
...

# Definitions (1)

According to PMI:

**“A project is a temporary endeavor undertaken to create a unique product, service, or result.”**

# Definitions (2)

## According to ISO 10 006:

Project is a unique process comprised of a series of coordinated and controlled activities with given start and completion dates that is carried out in order to accomplish a pre-defined goal that meets specified requirements including time, cost and resource constraints.

# Definitions (3)

- According to IPMA:
- **“Project is a time and cost constrained operation to realize a set of defined deliverables (the scope to fulfill the project’s objectives) up to quality standards and requirements.”**

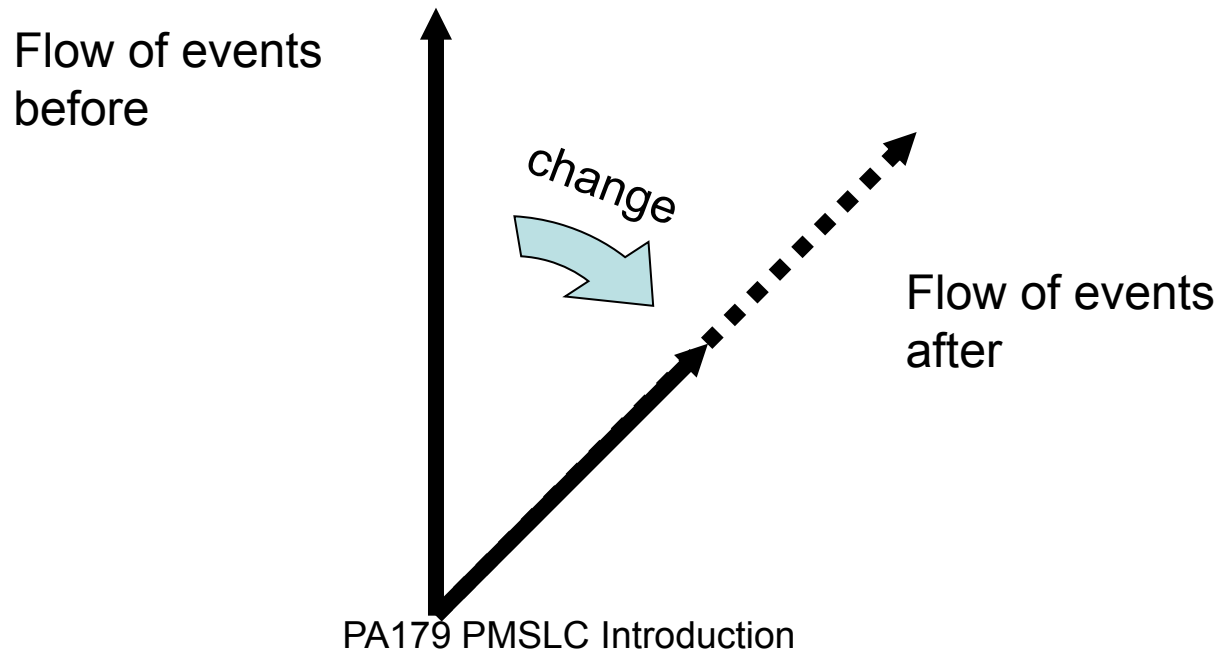

# Comments:

- ***Project is a sequence of activities with a start and an end, and allocated resources, directed to the creation of certain products or services.***
- ***Service vs. Product (??)***
- ***Creation of products/services is always connected with risks.***

# Project = realization of a change

- From the Time perspective: the World around us is a **Flow** of events.
- Project is a vehicle for changing the Flow of events.

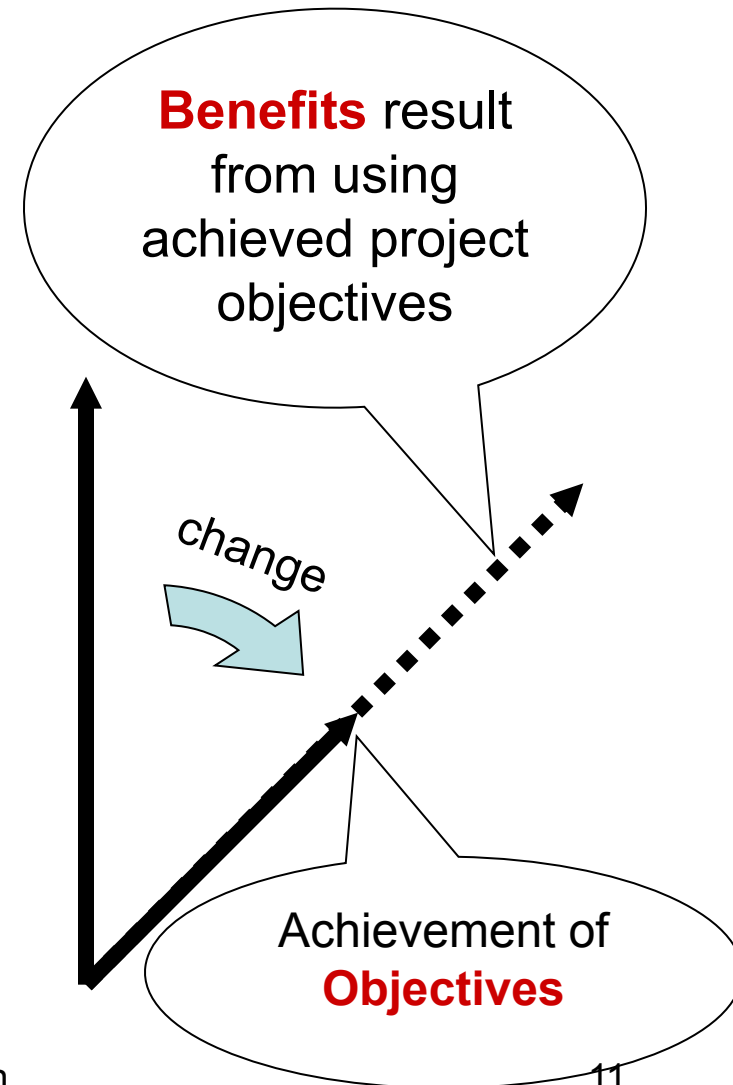

# Discussion

- What is an *objective* of a project?
- What is a *benefit* of a project?
- What is the difference between an objective and a benefit of a project?
  
- Can one thing be simultaneously an *objective* and a *benefit* of one and the same project?

# Benefits and objectives of a project

- Benefit is a profit that results from using achieved project objectives.
- Project objective is a description of a state after the implementation of a particular change (e.g., description of services, products, piece of work, etc.)

# Discussion

- Examples of Projects
  - Example?
  - Objective?
  - Benefit?
- Is your life a project?
- And do you manage your life as a project?

# Project and Project Management

- Project usually comprise of **stages**
  - A stage is a time period in which something complete is produced
  - Stages follow sequentially
- Project Management can be viewed in terms of phases
  - Each Project Management Phase is characterized by its own special approach

# Project Phases and project Stages

- Initiation
- Strategy
- Planning
- Implementation
- Handing over
- Evaluation
- Conclusion

Control /Management

Carried out

Implementation /Execution

Not carried out!

Carried out

Not carried out!

# Big Project with a big variance

- Is it possible to manage it using PM?
- Complexity issues !
- Solution? (Brainstorming)
- The solution is **RECURSION !!!**
- Multi-project = project composed of sub-projects
- Multi-project = **Program**

# What to do if we have lot of projects?

- Are they independent?
- If they have common goal >> Program
- If not?
- What causes their mutual dependence?
- How to manage this situation?
- **Portfolio** = a means for management of a collection of **Projects** and/or **Programs**.

# PPPM

Project  
Program  
Portfolio  
Management

# Question to consider:

**FORMULATE YOUR OWN DEFINITION OF  
WHAT A SERVICE IS.**

**Discussion, evaluation**

Compare with: Wikipedia, IBM papers on  
SSME, Communications of ACM, ...

# Definition

Service is an intangible phenomenon which could be one-shot or repeating activity bringing directly a benefit for its Client.

Service is provided by a Provider for a benefit of the Client by transforming or operating on a Target.

Service cannot be owned, nor stored.

To provide a Service a kind of co-operation between the Client and the Provider is needed.

# Service System Definition

Step-by-step to an amended  
definition based on  
Jim Spohrer (IBM, Almaden)  
approach

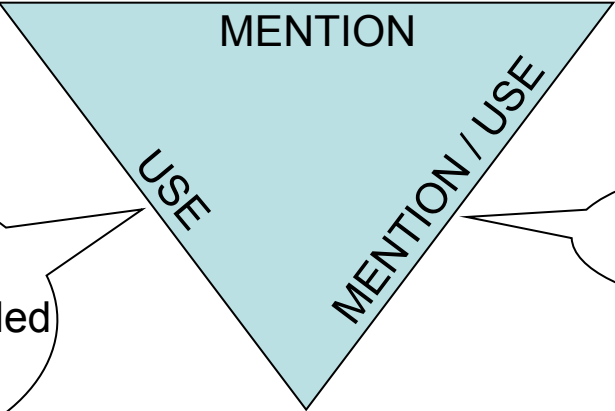

Individual or Organization  
(private or public,  
human or semi-human  
living or artificial)

**CLIENT**

P to C; C with P;  
value co-production  
value proposition  
information shared

Individual or Organization or Technology  
(owned or operated by  
Provider)

**PROVIDER**

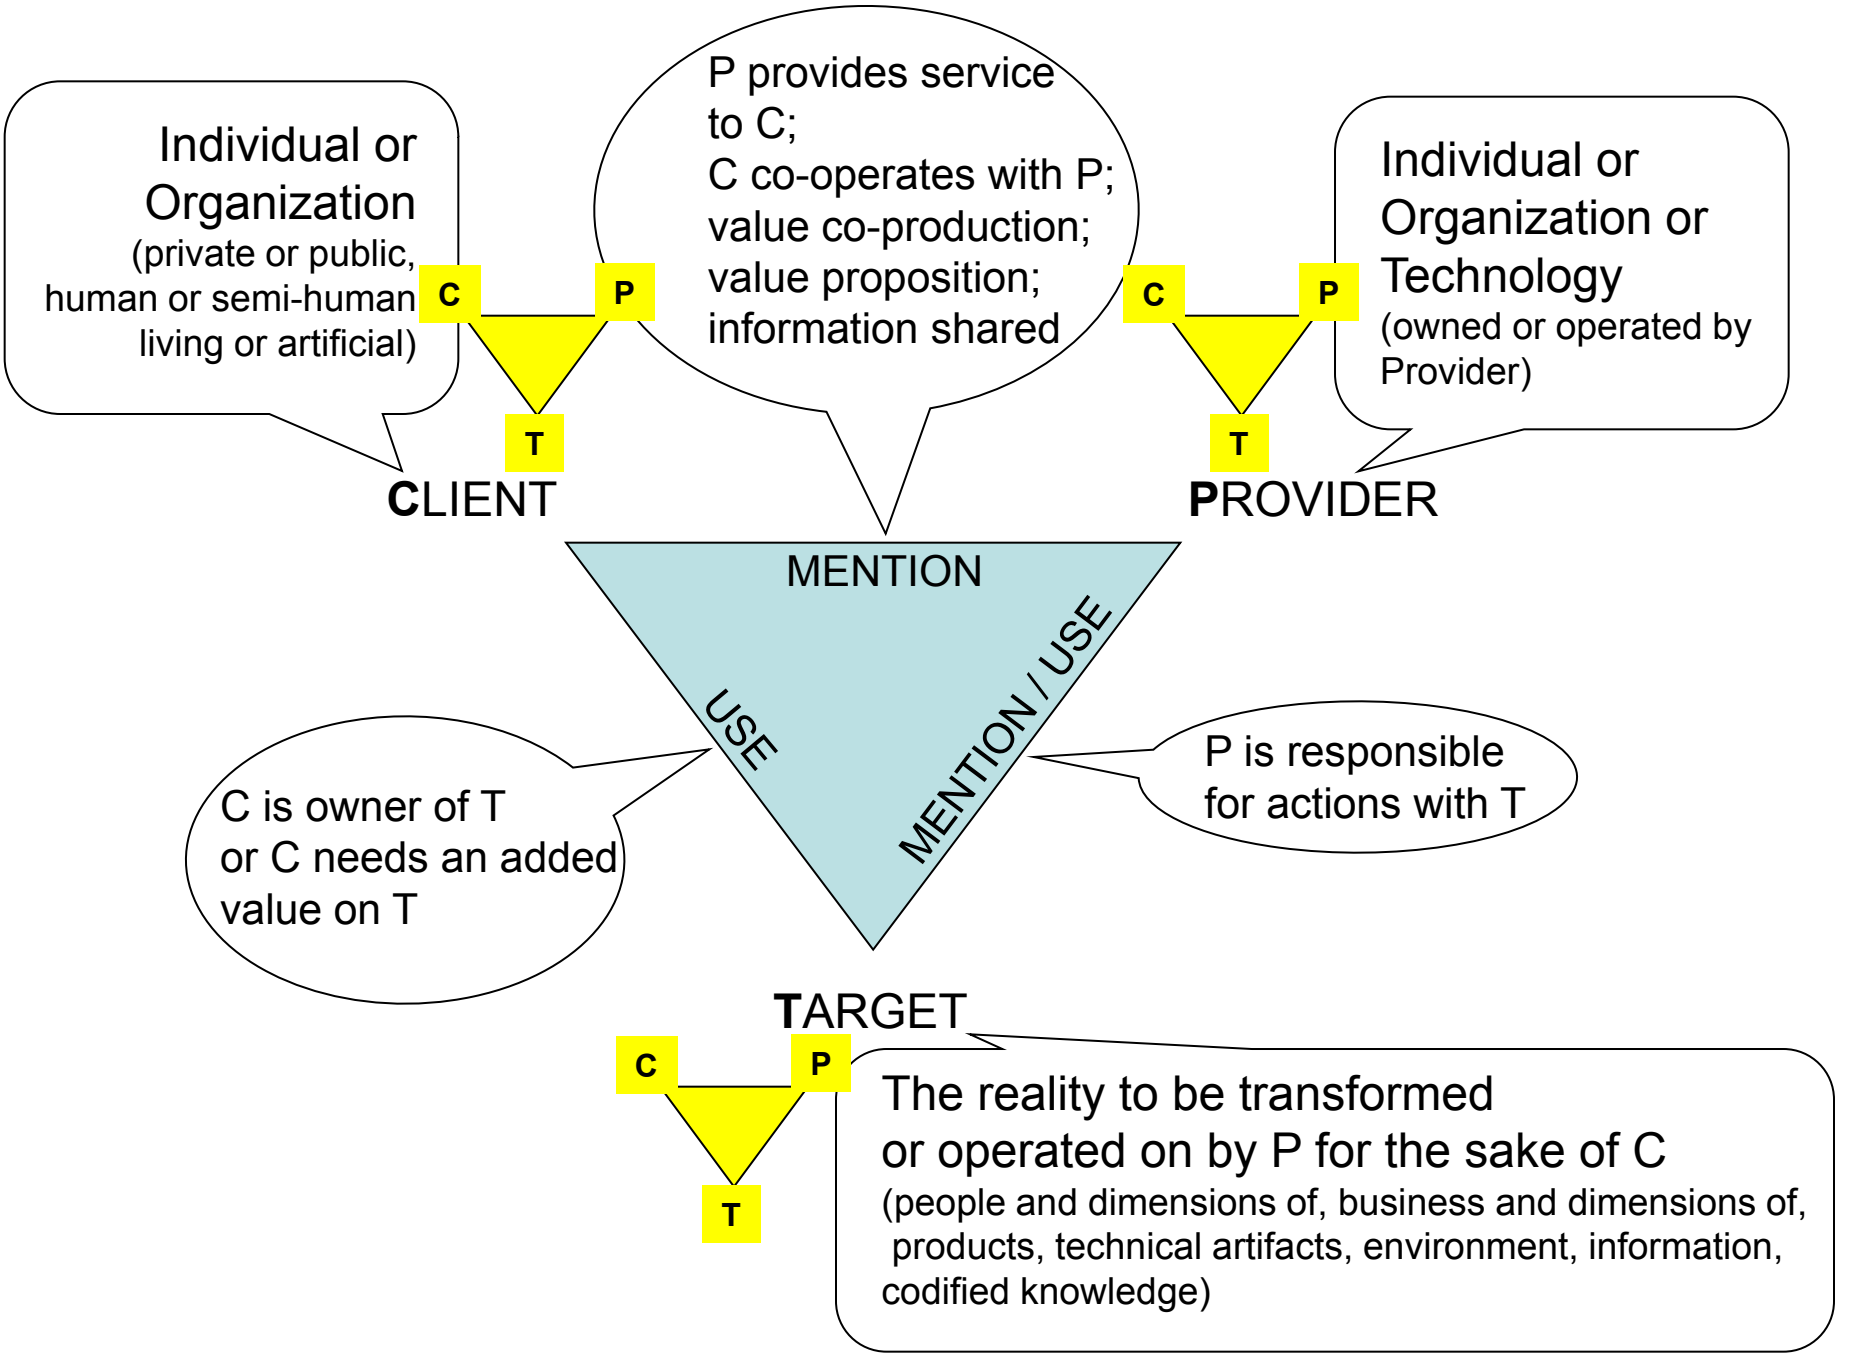

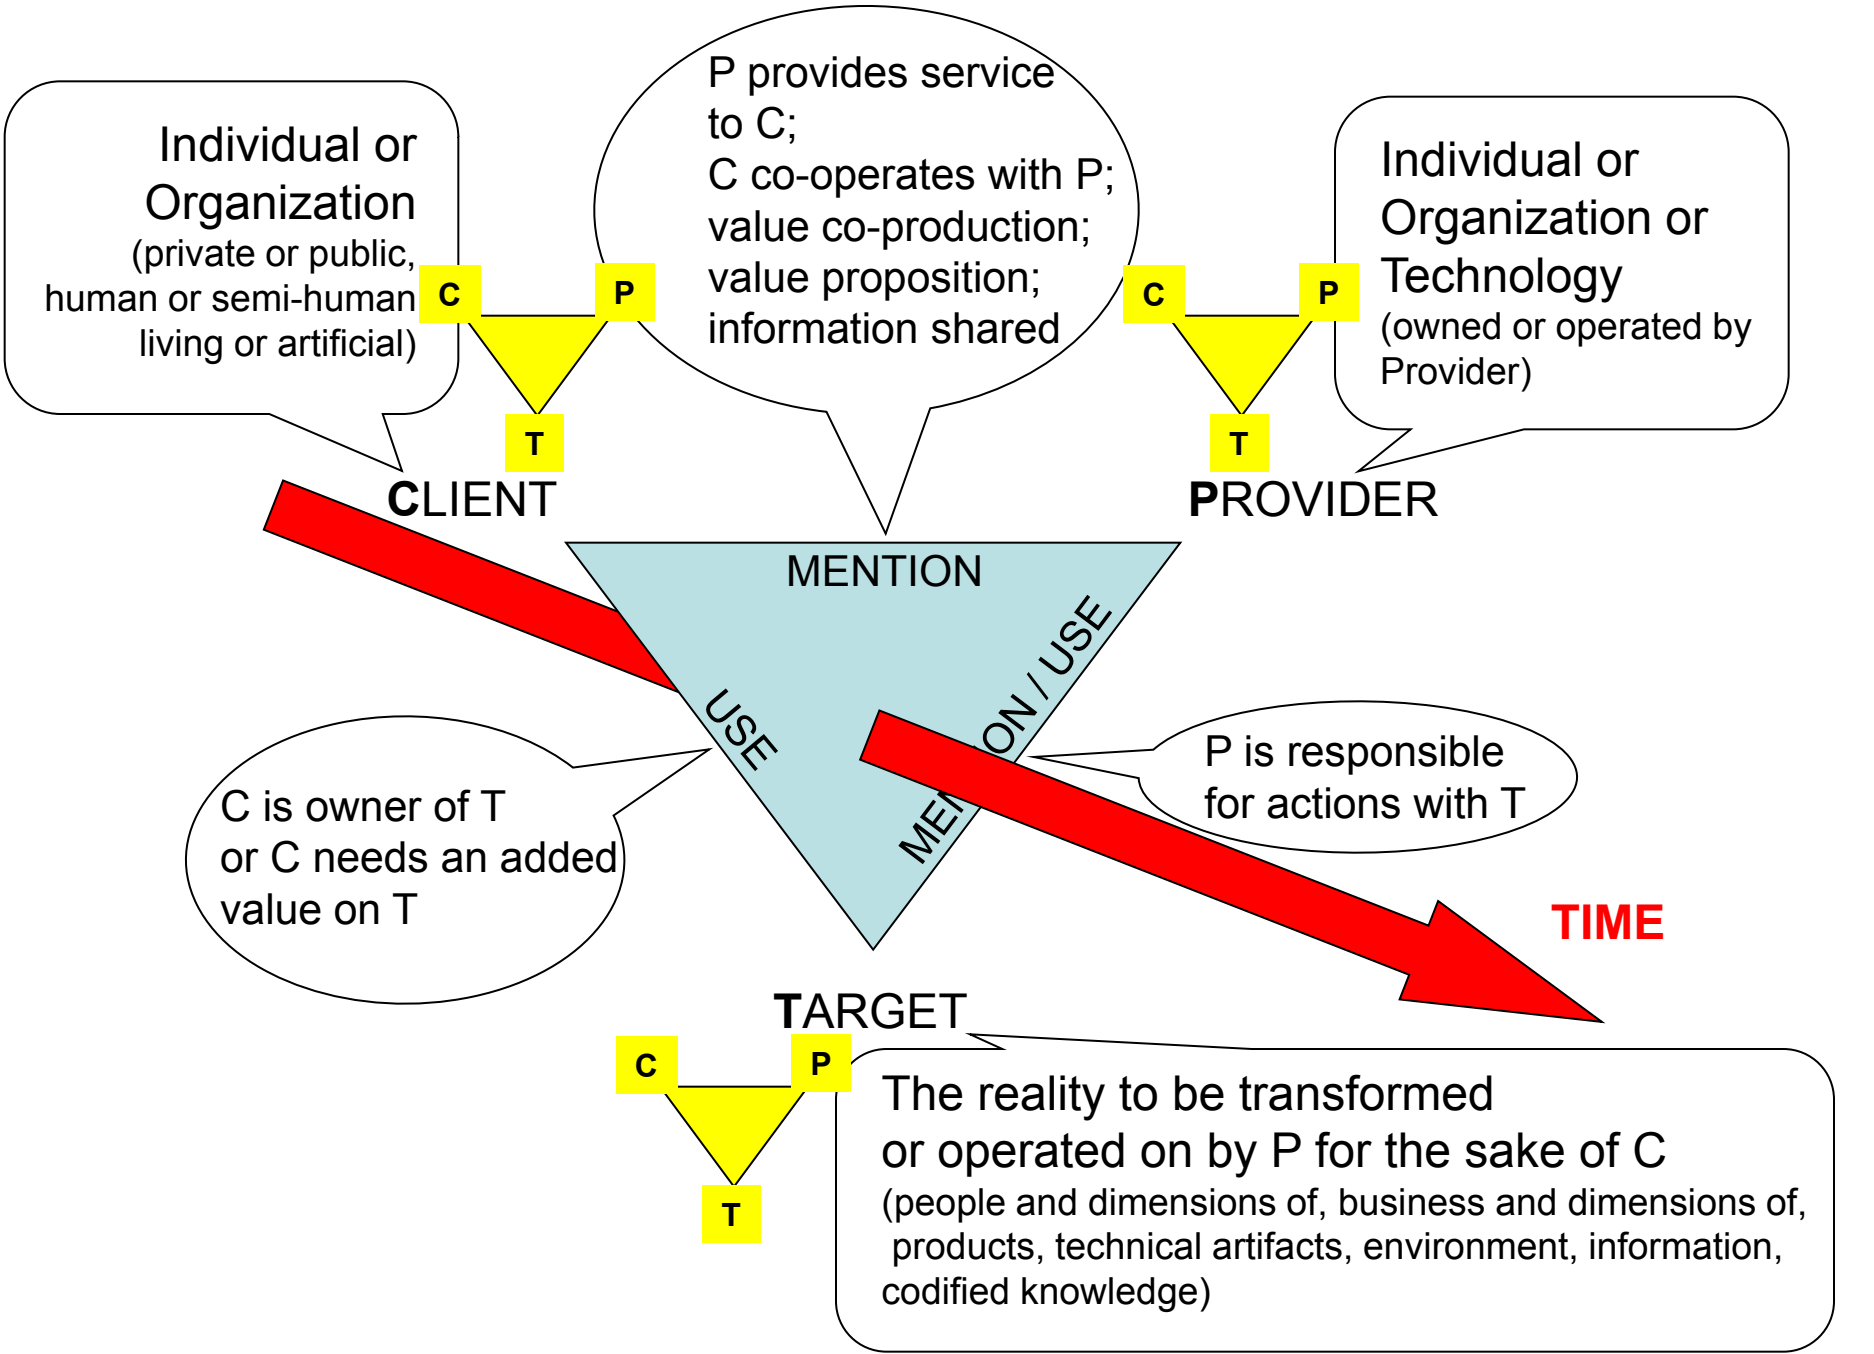

C is owner of T  
or C needs an added  
value on T

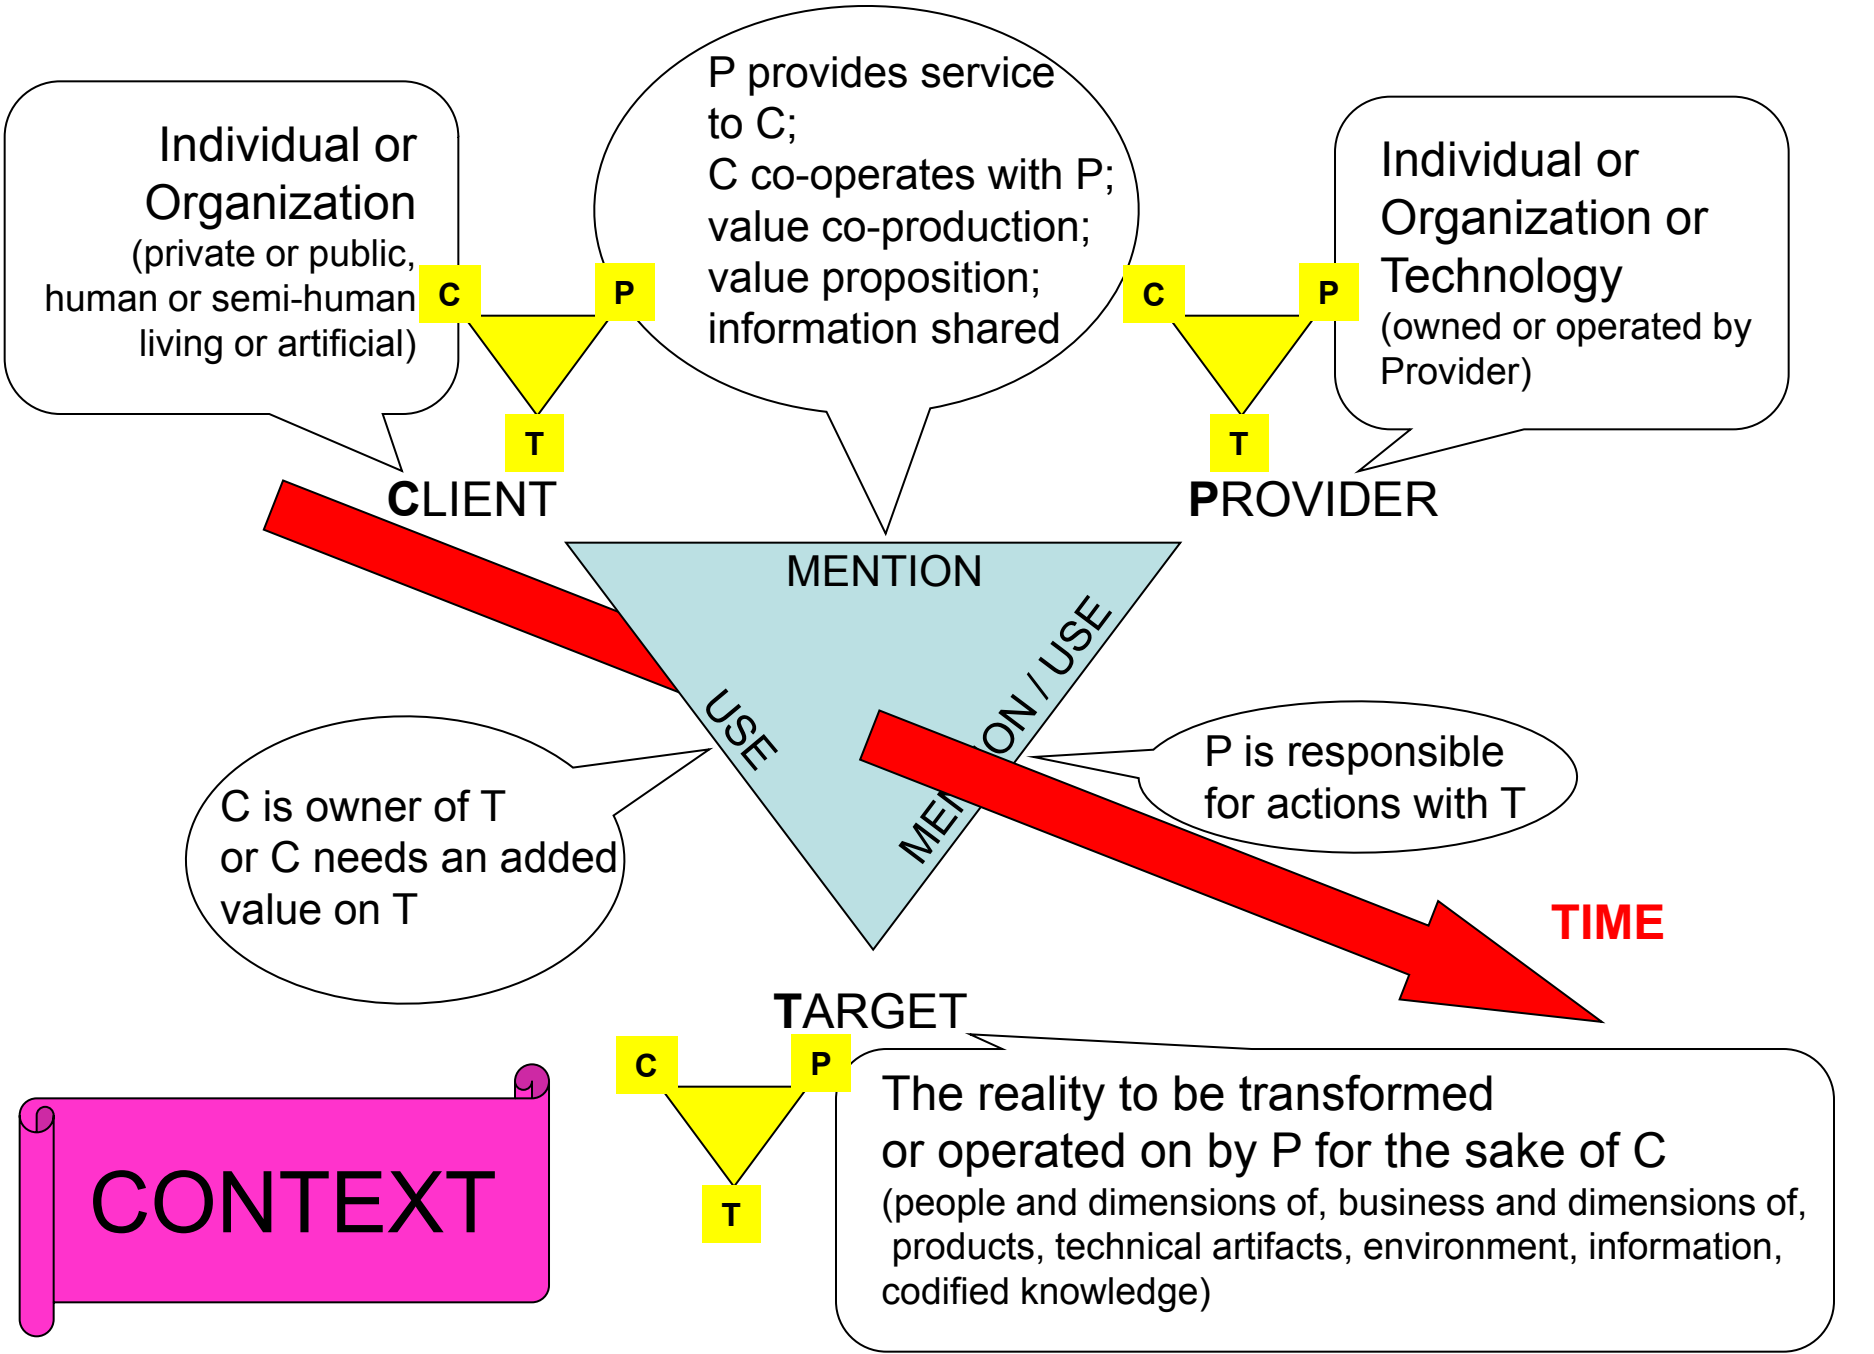

P is responsible  
for actions with T

**TARGET**

The reality to be transformed  
or operated on by P for the sake of C  
(people and dimensions of, business and dimensions of,  
products, technical artifacts, environment, information,  
codified knowledge)

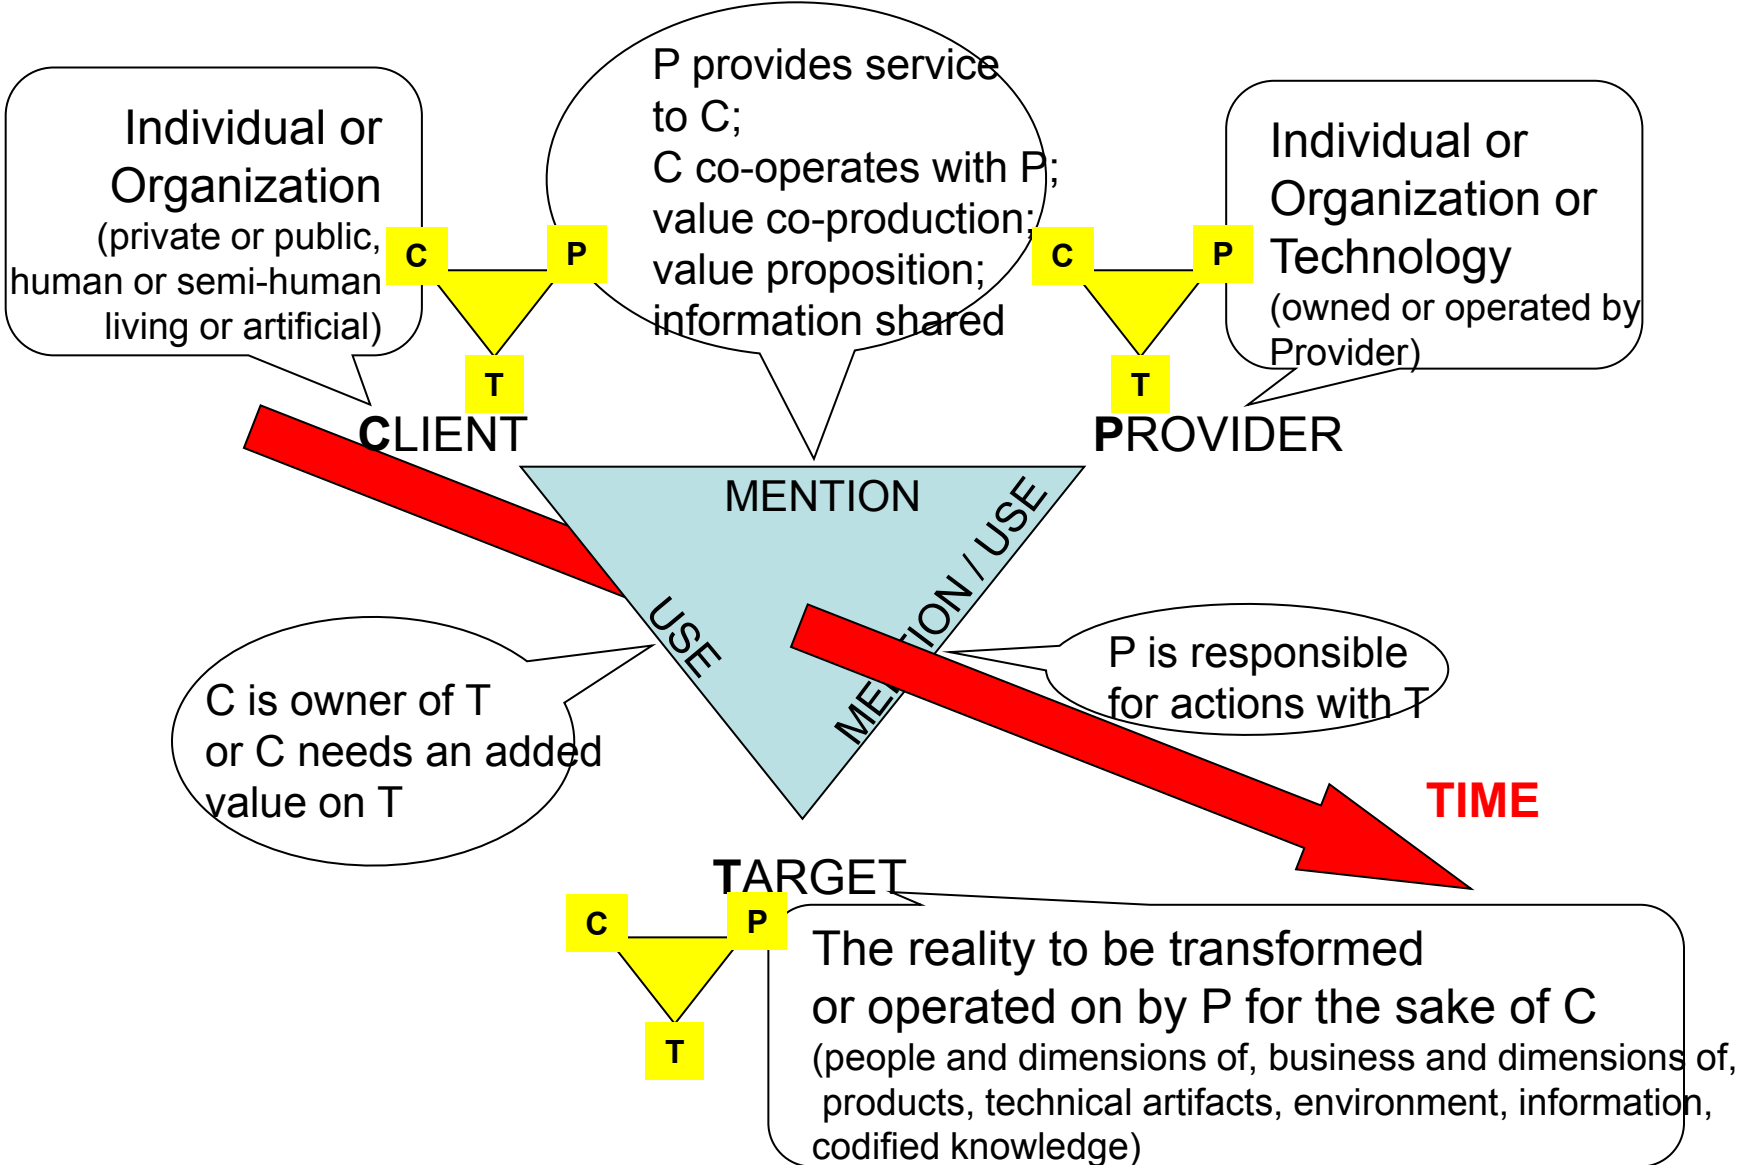

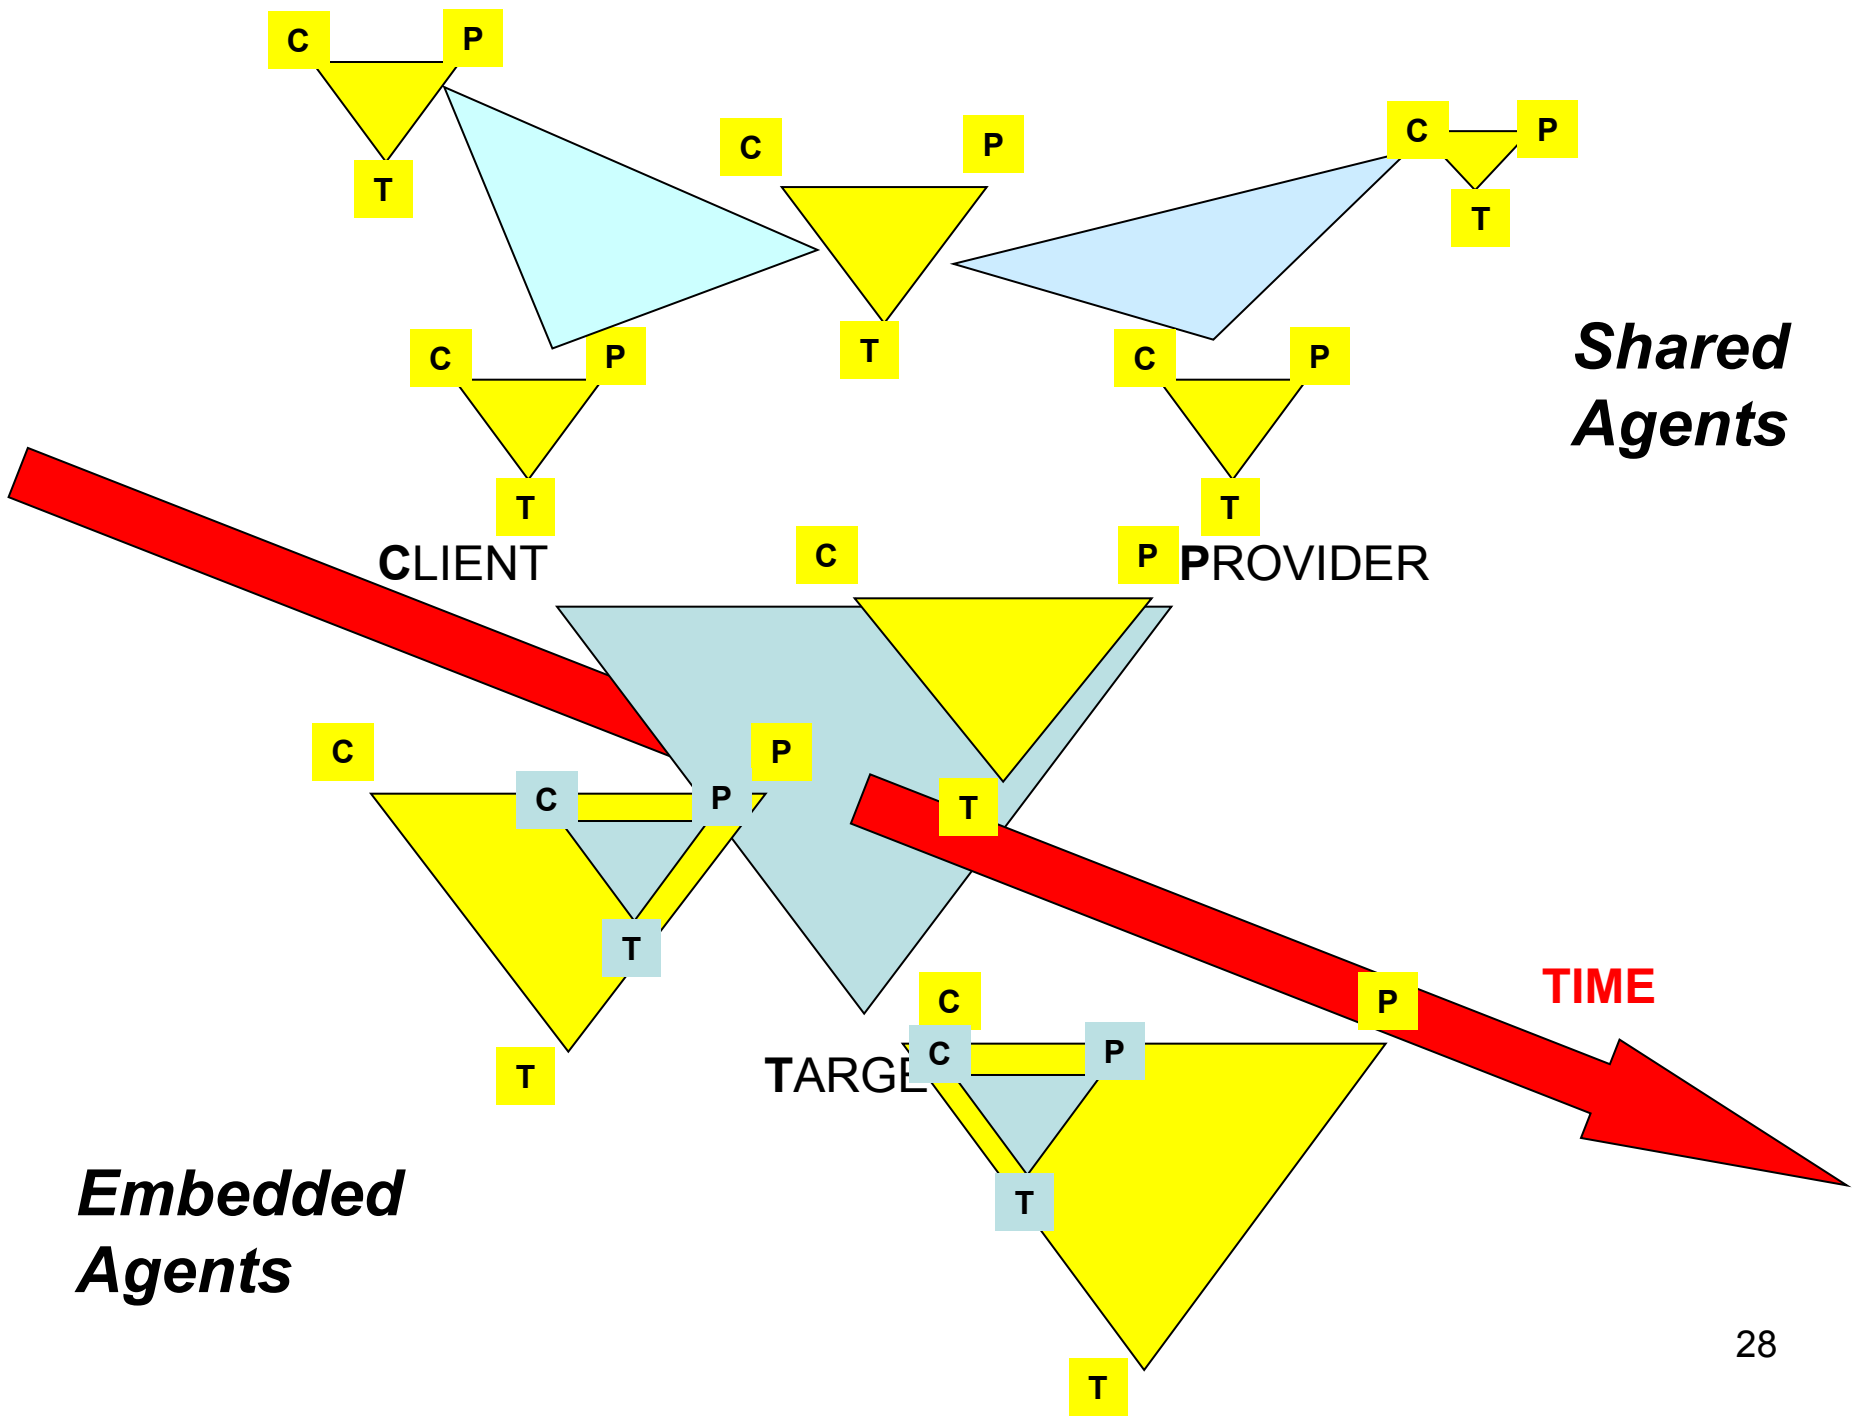

# Service System Definition

- Service system is a composite of agents (including both, people and artificial ones), technology, environment, and/or organization units of agents and/or technology, functioning in space-time and cyberspace for a given period of time.
- There is always lot of **contexts** from which the service system could be evaluated, explicated and comprehended.
- There exists at least one context from which the roles of Client, of Provider, and of Target could be recognized on agents or environment.

# In one context we could see:

... but in many contexts ...

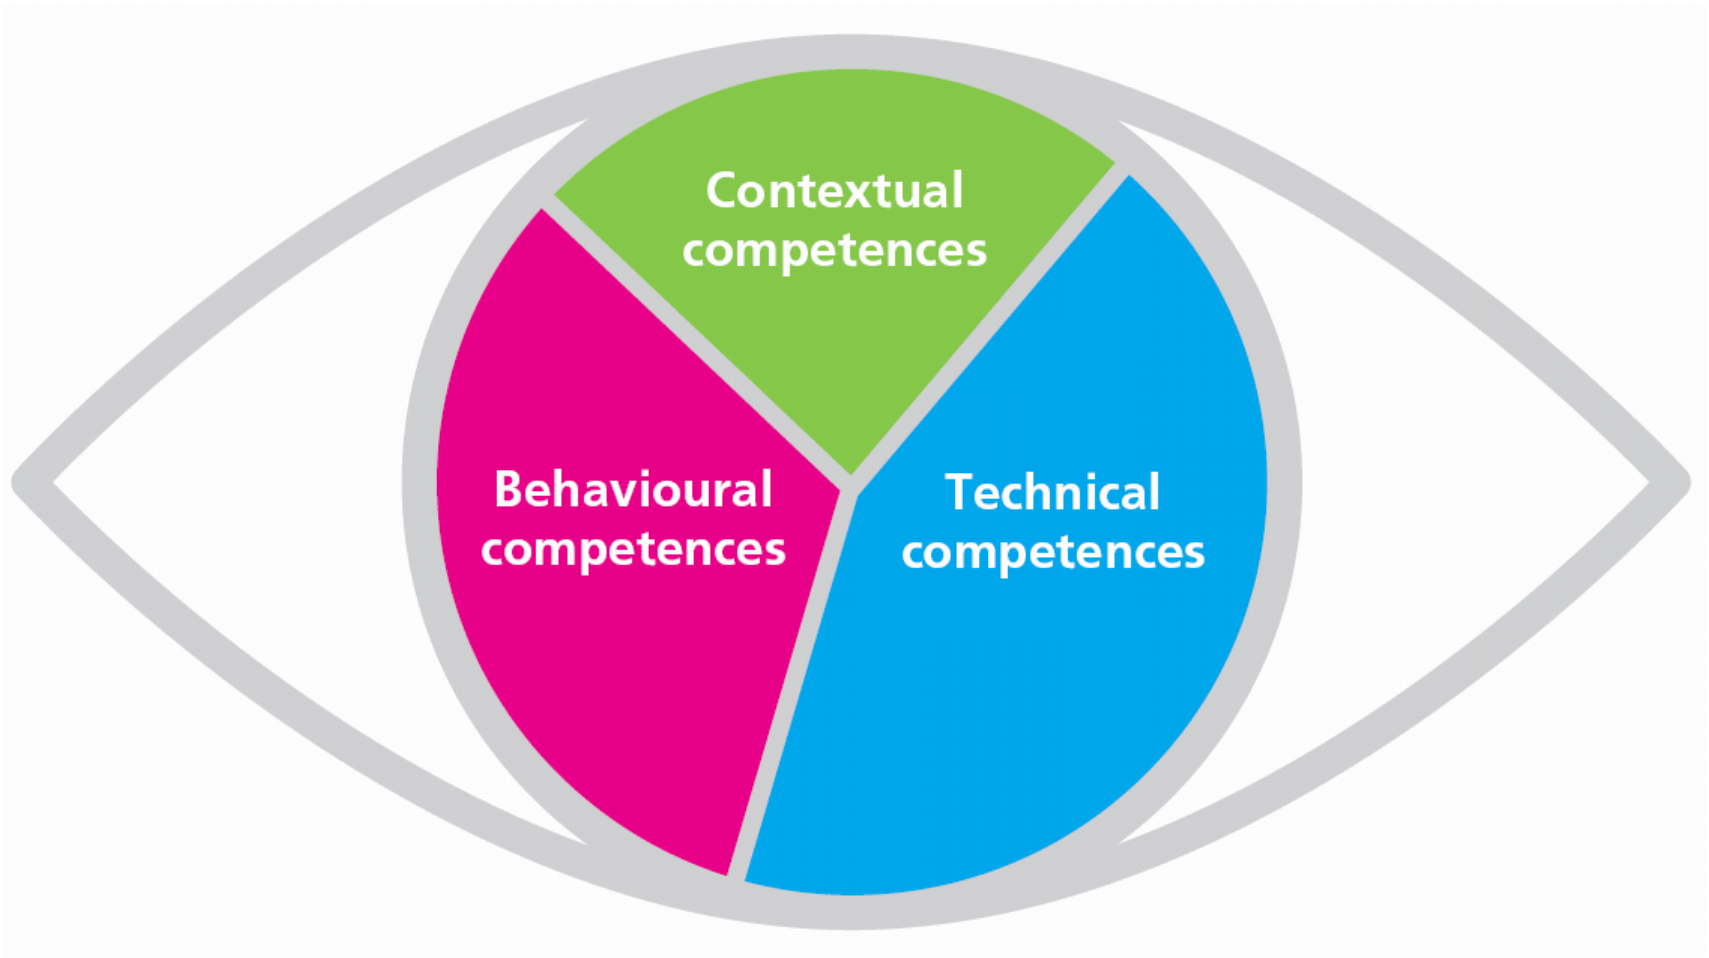

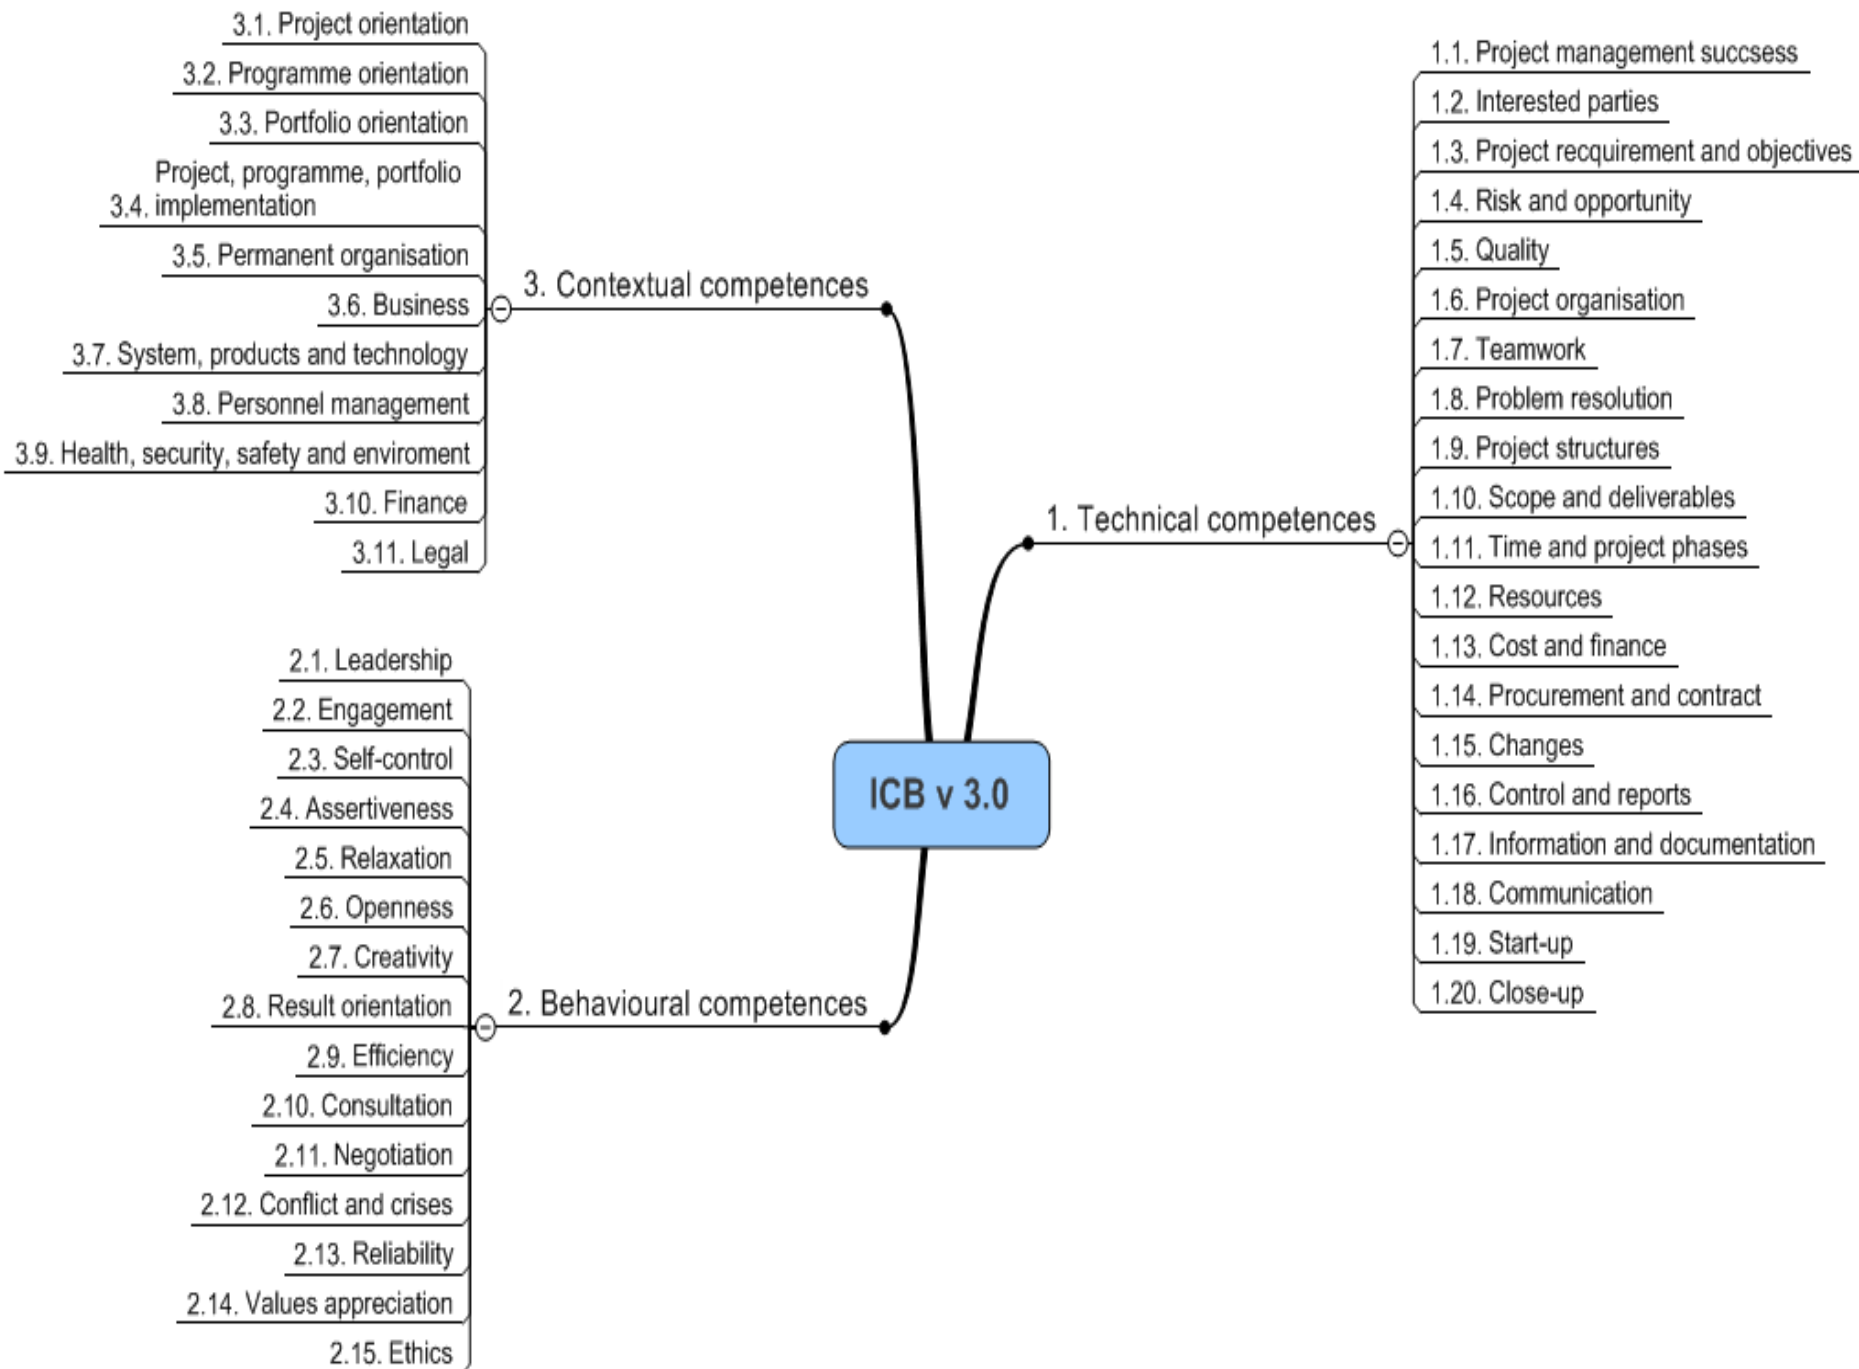

# Service Systems and PPPM

# Project-Program-Portfolio Management

- What is Project, what is Program, what is Portfolio
- Service creation ~ Project
- Service System creation ~ Program
- Service System operation ~ Portfolio or Program

# IPMA Competence Baseline

# Service Systems management could be completely explained in terms of PPPM

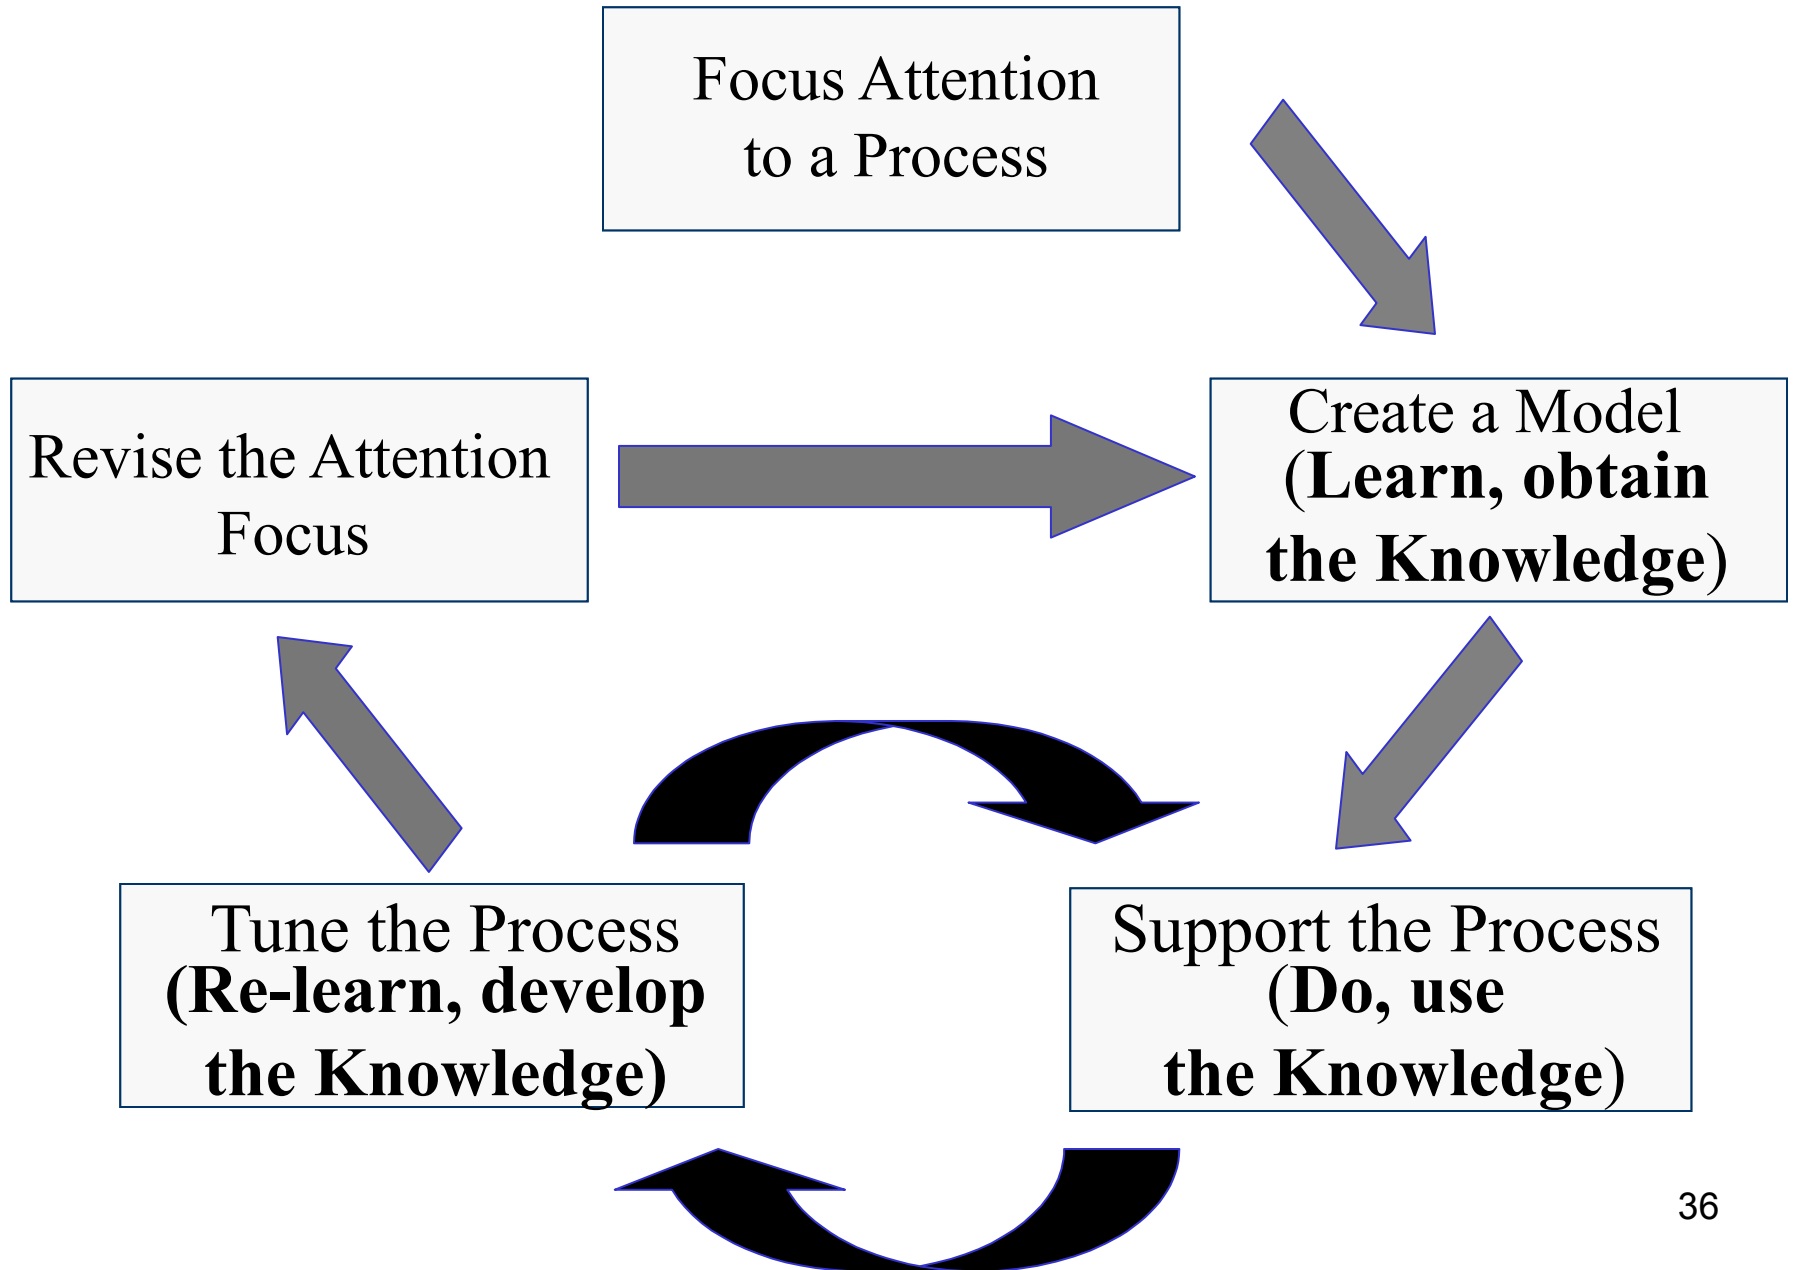

- Agent operating on Target
  - Needs Technical competences
- Agent dealing with Environment
  - Needs Contextual competences
- Agent dealing with humans
  - Needs Behavioral competences

# PPPM could be completely described in terms of Service System

- ... co-operating and/or embedded and/or shared agents comprise a Service System with lot of **contexts**.
- ... or they comprise a set of such Service Systems co-operating together.
- ... any case they conduct step-by-step learning/doing process

# Learning cycle of Service System

The MENTION-USE  
principle application

# MENTION

Focus Attention  
to a Process

Strategy / Direction

# MENTION

Create a Model  
**(Learn, obtain  
the Knowledge)**

# USE

Support the Process  
**(Do, use  
the Knowledge)**

# MENTION

Tune the Process  
**(Re-learn, develop  
the Knowledge)**

Revise the Attention  
Focus

# MENTION

# Remember!

- The two words:

## MENTION – USE

- You will see it many times during my courses
- Step-by-step you will find the wisdom behind it ...
