CR🔓CS
Centre for Research on
Cryptography and Security

Practical assignment

- Communication between client and server
  - Send packet from client with username / password|key
  - Receive packet on server side into users list
  - Send list of already listed users back to client
  - Send packet from client with logout message

- Implement for parties positioned on different machines

- Make extensive logging (when, what, data)

- Create unit tests
  - Server available, not available
  - Password|key right wrong
  - Two users added -> two should be send back
  - …
