PERFORMANCE TEST

EmbedIT
6th November 2014
Petr Střítecký, Michal Godar

Definition

- < Performance test determines how a system performs in terms of responsiveness and stability under a particular workload
- < It can also serve to investigate, measure, validate or verify other quality attributes of the system, such as scalability, reliability and resource usage

http://en.wikipedia.org/wiki/Software_performance_testing

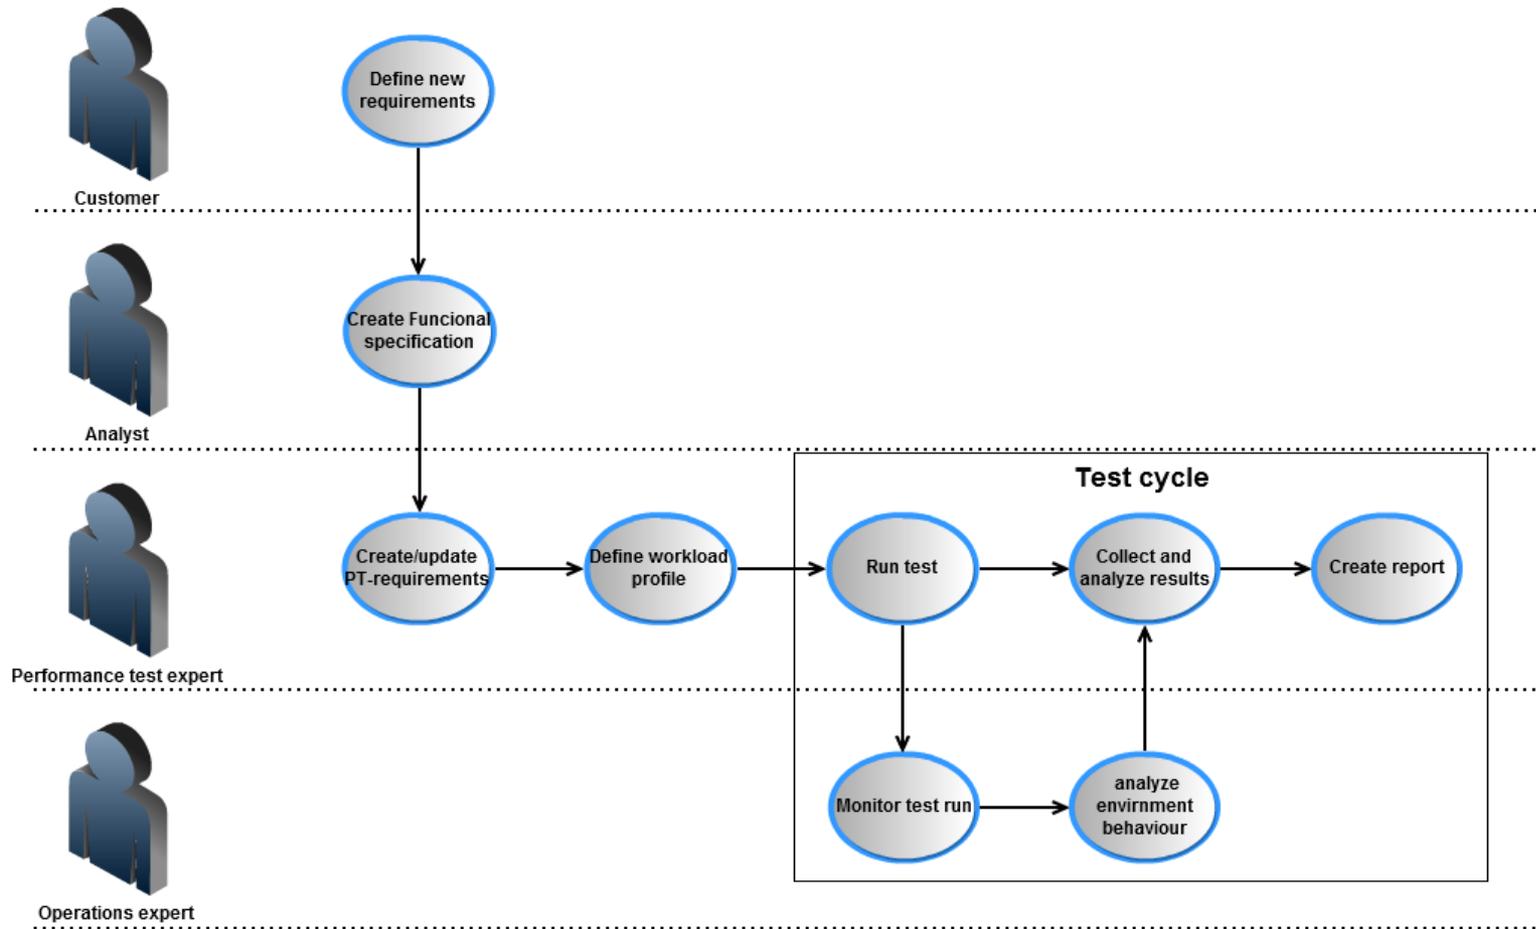

WIKIPEDIA
The Free Encyclopedia

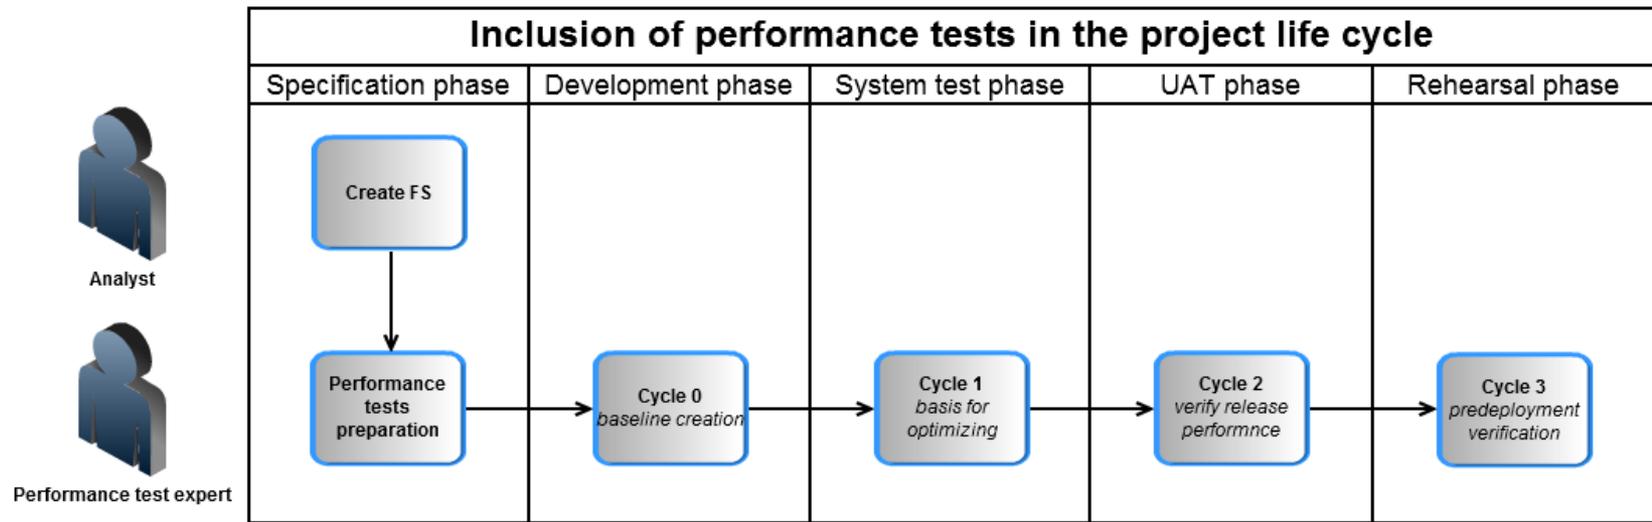

Motivation

- < Prove that the system in a new version is stable under the real workload
- < Prevent future performance issues
- < Perform tests which can't be executed manually
- < Help to increase system overall stability
- < Set the limits and find the bottlenecks of the application
- < Ensure that application will be ready for business attractive terms

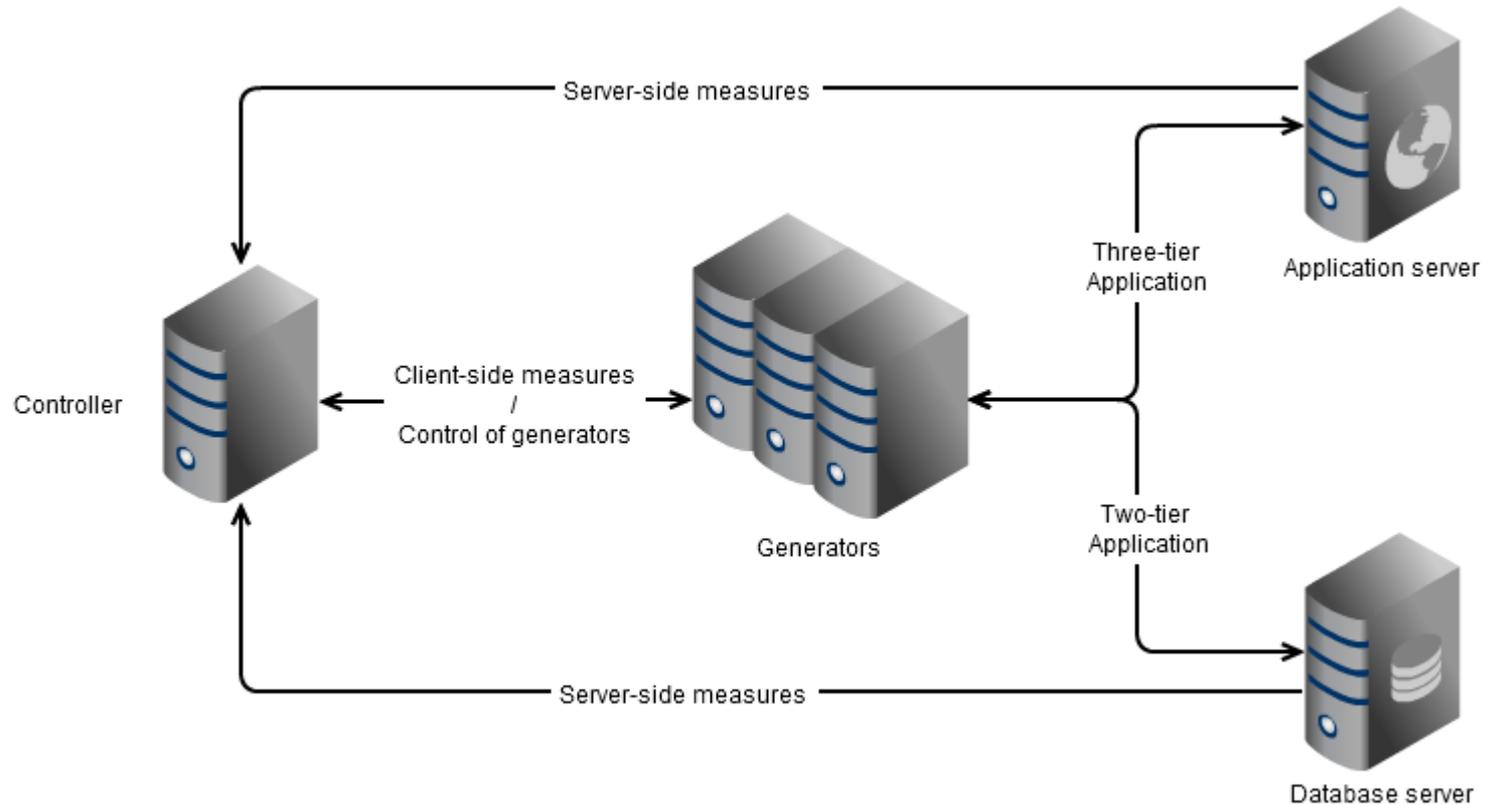

Processes architecture and technologies

Processes architecture and technologies

Processes **architecture** and technologies

Processes **architecture** and technologies

< Performance test prerequisites

- < non-functional requirements
- < functional specification

< Test data preparation

- < static data
- < random generated data
- < load required data from database

< Issue reporting

- < test run evaluation
- < issues are created in tracking system

Processes architecture and technologies

< Silk Performer

- < Overall management of the performance test

 - Application recording*

 - Code adjustments*

 - Workload and agents configuration*

 - Test run and monitoring*

 - Results analysis*

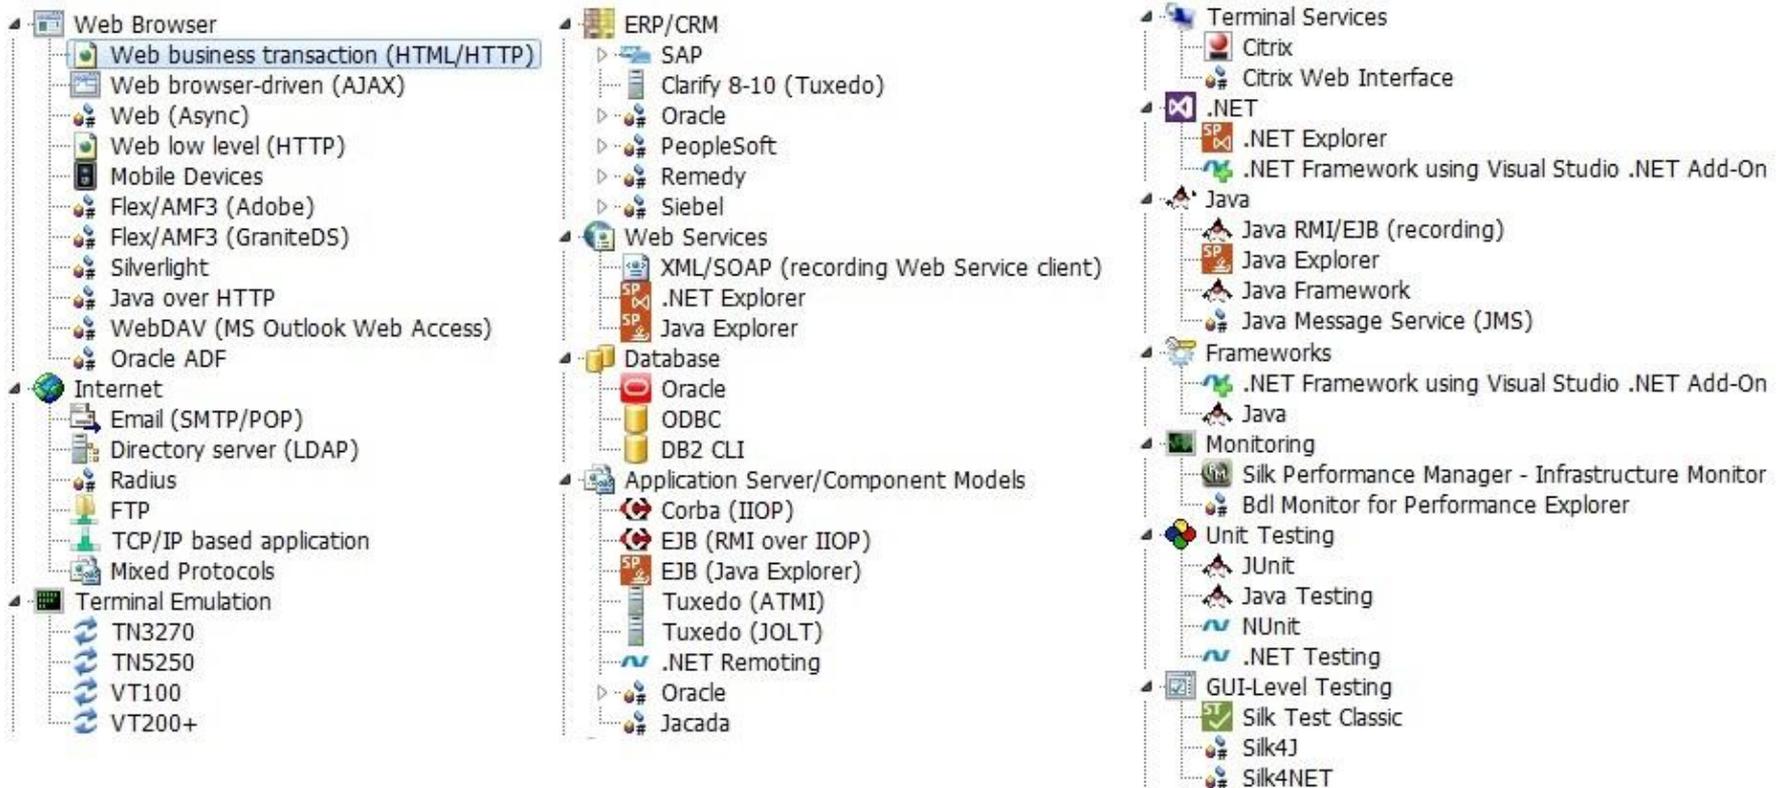

- < Structural programming language

- < Wide protocol support

- < Front-end diagnostics from the end user perspective - TrueLog

Processes architecture and technologies

< Other supported protocols

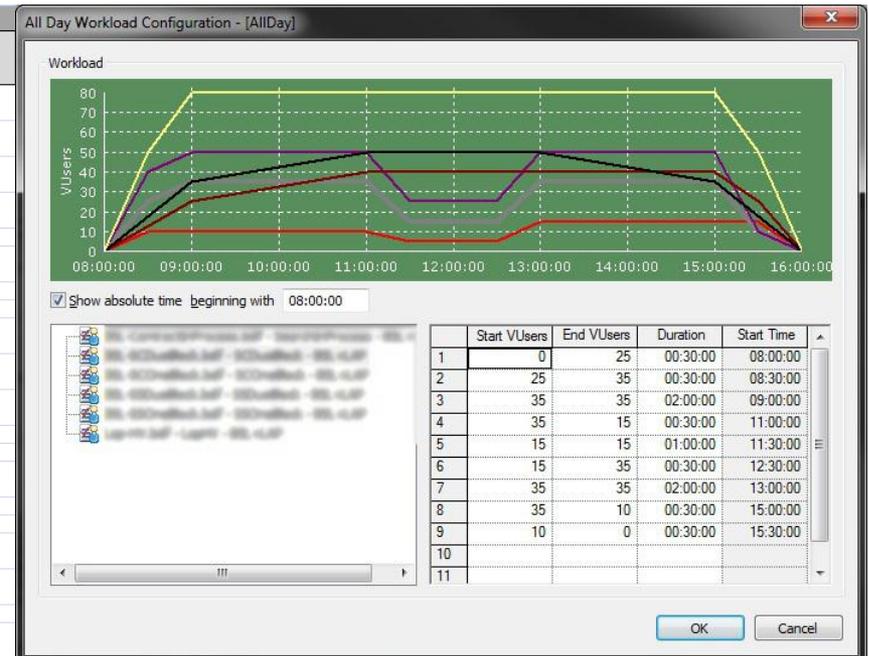

Baseline test Requirements

< Expected scenarios

< Workload

< Non-functional requirements

Business transactions					
Business transaction	Number of transactions [in one hour]	Time - 90 percentil [s]	Note	Source of information	Updated by
System1 : Script1	2800	3	Time needed to perform action	Function specification	John Doe
System1 : Script2	1600	3	Time needed to generating report	Function specification	Jane Doe
System1 : Script3	100	2	Time needed for aquire set of information	Analyst	John Doe
System1 : Script4	100	5	Time needed to display screen with fully loaded data	Developer	Jane Doe
System1 : Script5	100	8	Time needed to perform action	Analyst	John Doe
System1 : Script6	100	8	Time needed to evaluate a statement	specification	Jane Doe
System1 : Script7	700	8	Time needed to generating report	Developer	John Doe
System1 : Script8	200	8	Time needed to perform action	Analyst	Jane Doe
System2 : Script1	160	8	Time needed for aquire set of information	Function specification	John Doe
System2 : Script2	560	8	Time needed to display screen with fully loaded data	Developer	Jane Doe
System2 : Script3	420	3	Time needed to evaluate a statement	specification	John Doe
System2 : Script4	250	3	Time needed to perform action	Analyst	Jane Doe
System2 : Script5	590	3	Time needed to generating report	Developer	John Doe
System2 : Script6	1500	3	Time needed for aquire set of information	Function specification	Jane Doe
System3 : Script1	250	5	Time needed to generating report	Analyst	John Doe
System3 : Script2	350	5	Time needed to perform action	Analyst	John Doe
System3 : Script3	400	3	Time needed to generating report	Function specification	John Doe
System3 : Script4	120	7	Time needed to display screen with fully loaded data	Developer	John Doe
System3 : Script5	740	1	Time needed to generating report	Analyst	John Doe
System3 : Script6	100	2	Time needed for aquire set of information	Function specification	John Doe

Baseline test Run

The screenshot displays the Silk Performer Workbench interface during a baseline test run. The main window is titled "Silk Performer Workbench - Visual 2.0.0 - Windows". The interface is divided into several panes:

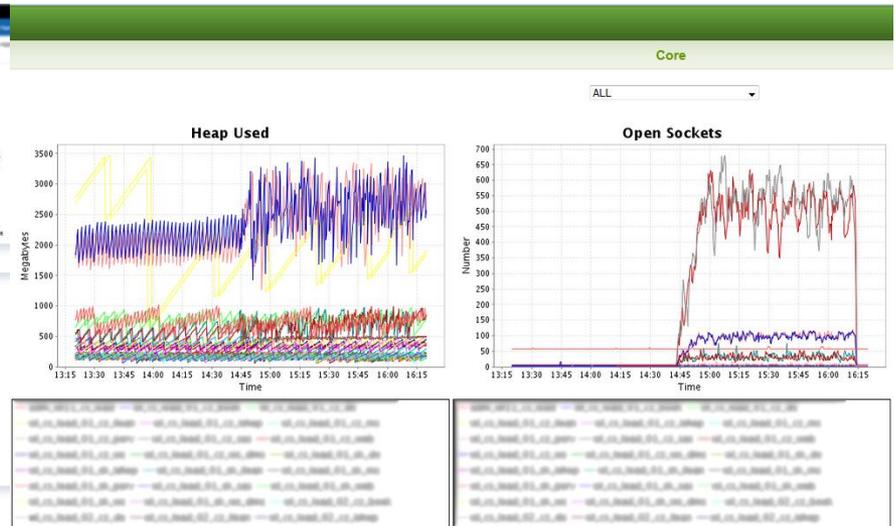

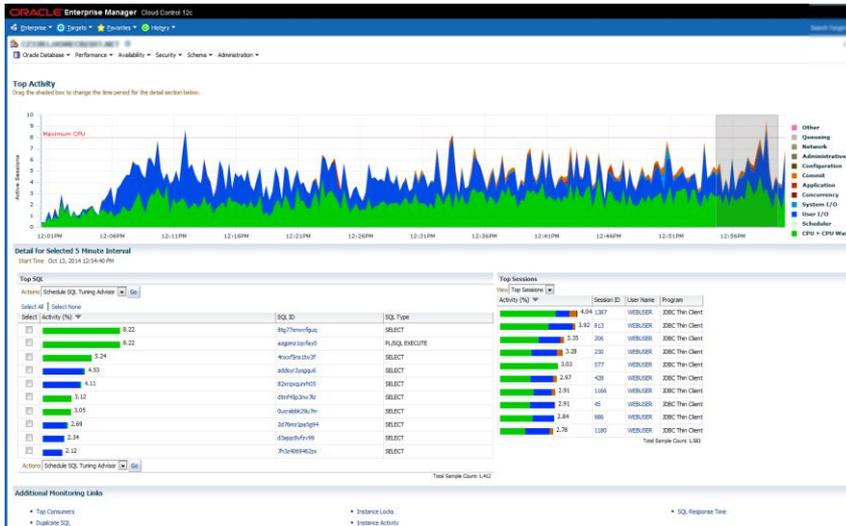

- Project Pane:** Shows a tree view of the test project, including Profiles (2) and Scripts (31).
- Summary Table:** A table with columns: Summary, Status, Users created, exec, failed, Cpu, Mem..., Responsiv..., Transacti..., Tra. BusyTi..., Progress, Errors, Time, Conne..., Conne..., Conne..., Reques..., Reques..., Respon... The table shows various test scenarios with their respective metrics.
- User Table:** A table with columns: User, Agent, Status, Current Transa..., Lst Resp., Avg. Resp., Transacti..., Tra. Bu..., Progress, Errors, Time, Conne..., Conne..., Conne..., Reques..., R... This table provides detailed performance data for individual users.
- Output Table:** A table with columns: User, Agent, Line, Time, Type, Text, Info. This table shows the execution log, including function calls and warnings.

The bottom status bar indicates "Ready" and "Ln 59, Col 8".

Baseline test HW Monitoring

< Database

< Application server

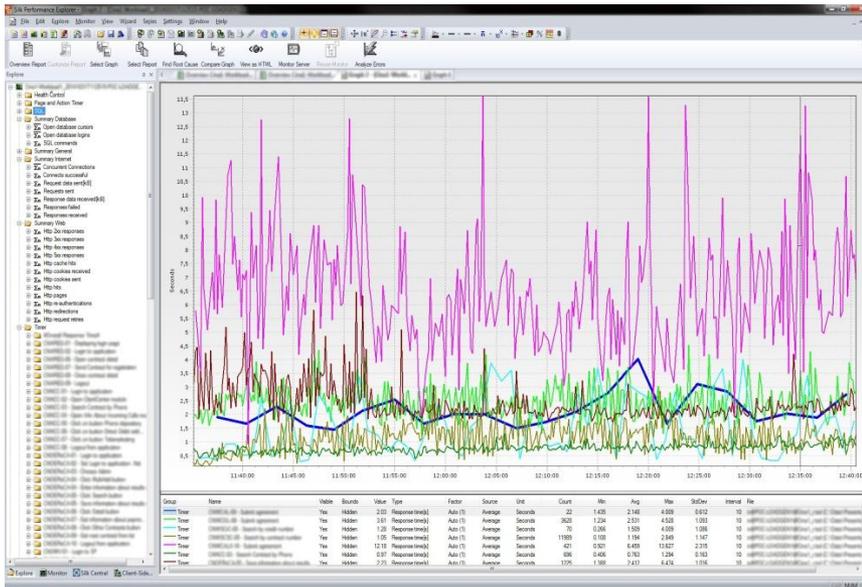

- < Oracle Enterprise Manager

Other test

< **Stress test**

- < Finding application limits and bottlenecks

< **Module test**

- < Detailed, focused on internal module performance

< **What-if test**

- < Simulate unusual state and check if the system is able to handle it

< **Comparative HW test**

- < Same application is tested on different HW platform

Conclusion
