About The Class ●○○○○○○○	Motivation	GPU Architecture	C for CUDA	Sample Code
Language				

 ${\sf I}$  speak English as long as there is some foreign student in the room

• expect Slovak :-)

But I understand that

- my English is not perfect
- your English may not be perfect
- so feel free to interrupt me and ask me, if you do not understand
- If you do not feel comfortable to ask me in English
  - ask me in Czech/Slovak

About The Class ○●○○○○○○	Motivation	GPU Architecture	C for CUDA	Sample Code
About the cla	ass			

The class is focused on algorithm design and programming of *general purpose* computing applications on *many-core vector processors* 

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code
0000000				
	- <b>-</b>			
About the	CLASS			

The class is focused on algorithm design and programming of *general purpose* computing applications on *many-core vector processors* 

We will focus to CUDA GPUs first:

- C for CUDA is good for teaching (easy API, a lot of examples available, mature compilers and tools)
- restricted to NVIDIA GPUs and x86 CPUs (with PGI)

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code

About the	class			

The class is focused on algorithm design and programming of *general purpose* computing applications on *many-core vector processors* 

We will focus to CUDA GPUs first:

- C for CUDA is good for teaching (easy API, a lot of examples available, mature compilers and tools)
- restricted to NVIDIA GPUs and x86 CPUs (with PGI)

After learning CUDA, we focus to OpenCL

- programming model very similar to CUDA, easy to learn when you already know CUDA
- can be used with various HW devices
- $\bullet\,$  we will focus on code optimizations for x86, Intel MIC (Xeon Phi) and AMD GPUs

The class is practically oriented – besides efficient parallelization, we will focus on writing efficient code.

About The Class ○○●○○○○○	Motivation	GPU Architecture	C for CUDA	Sample Code
What is offer	red			

You will learn:

- architecture of NVIDIA and AMD GPUs, Xeon Phi
- architecture-aware design of data-parallel algorithms
- programming in C for CUDA and OpenCL
- performance tuning and profiling
- basic tools and libraries for CUDA GPUs
- use cases

About The Class ○○○●○○○○	Motivation	GPU Architecture	C for CUDA	Sample Code
What is ex	pected from	vou		

During the semester, you will work on a practically oriented project

- important part of your total score in the class
- the same task for everybody, we will compare speed of your implementation
- 50 + 20 points of total score
  - working code: 25 points
  - efficient implementation: 25 points
  - speed of your code relative to your class mates: at most 20 points (only to improve your final grading)

Exam (oral or written, depending on the number of students)

• 50 points

About The Class ○○○○●○○○	Motivation	GPU Architecture	C for CUDA	Sample Code
Grading				

For those finishing by exam:

- A: 92–100
- B: 86–91
- C: 78–85
- D: 72–77
- E: 66–71
- F: 0–65 pts

For those finishing by colloquium:

• 50 pts

## Motivation – GPU memory bandwidth

About The Class	Motivation ○○●○○○○○	GPU Architecture	C for CUDA	Sample Code			
Motivation – programming complexity							

OK, GPUs are more powerful, but GPU programming is substantially more difficult, right?

- $\bullet$  well, it is more difficult comparing to writing serial C/C++ code...
- but can we compare it to serial code?

About The Class	Motivation ○○●○○○○○	GPU Architecture	C for CUDA	Sample Code				
Motivation -	Motivation – programming complexity							

OK, GPUs are more powerful, but GPU programming is substantially more difficult, right?

- $\bullet$  well, it is more difficult comparing to writing serial C/C++ code...
- but can we compare it to serial code?

#### Moore's Law

Number of transistors on a single chip doubles every 18 months

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code
Motivation -	programn	ning complexit	y .	

OK, GPUs are more powerful, but GPU programming is substantially more difficult, right?

- $\bullet$  well, it is more difficult comparing to writing serial C/C++ code...
- but can we compare it to serial code?

#### Moore's Law

Number of transistors on a single chip doubles every 18 months

Corresponding growth of performance comes from

- **in the past:** frequency increase, instruction parallelism, out-of-order instruction processing, caches, etc.
- today: vector instructions, increase in number of cores

• • = • • =

Motivation				
About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code

Moore's Law consequences:

- in the past:changes were important for compiler developers; application developers didn't need to worry
- **today**: in order to utilize state-of-the-art processors, it is necessary to write parallel and vectorized code
  - it is necessary to find parallelism in the problem being solved, which is a task for a programmer, not for a compiler (at least for now)
  - writing efficient code for modern CPUs is similarly difficult as writing for GPUs

About The Class	Motivation ○○○○●○○○	GPU Architecture	C for CUDA	Sample Code
Electrostatic	Potential N	/lap		

Important problem from computational chemistry

- we have a molecule defined by position and charges of its atoms
- the goal is to compute charges at a 3D spatial grid around the molecule
- In a given point of the grid, we have

$$V_i = \sum_j \frac{w_j}{4\pi\epsilon_0 r_{ij}}$$

Where  $w_j$  is charge of the *j*-th atom,  $r_{ij}$  is Euclidean distance between atom *j* and the grid point *i* and  $\epsilon_0$  is vacuum permittivity.

About The Class	Motivation ○○○○●○○	GPU Architecture	C for CUDA	Sample Code
Electrostat	ic Potential	Мар		

Initial implementation

- suppose we know nothing about HW, just know C++  $\,$
- algorithm needs to process 3D grid such that it sums potential of all atoms for each grid point
- we will iterate over atoms in outer loop, as it allows to precompute positions of grid points and minimizes number of accesses into input/output array

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code
		N A		

# Electrostatic Potential Map

```
void coulomb (const sAtom* atoms, const int nAtoms,
    const float gs, const int gSize, float *grid) {
 for (int a = 0; a < nAtoms; a++) {
    sAtom myAtom = atoms[a];
    for (int x = 0; x < gSize; x++) {
      float dx^2 = powf((float)x * gs - myAtom.x, 2.0f);
      for (int y = 0; y < gSize; y++) {
        float dy_2 = powf((float)y * gs - myAtom.y);
        for (int z = 0; z < gSize; z++) {
          float dz = (float)z * gs - myAtom.z;
          float e = myAtom.w / sqrtf(dx2 + dy2 + dz*dz);
          grid[z*gSize*gSize + y*gSize + x] += e;
```

About The Class	Motivation	GPU Architecture ●○○○○○○○	C for CUDA	Sample Code
Why are GPL	Js so power	ful?		

Types of Parallelism

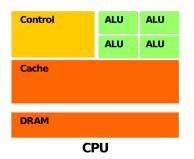

- Task parallelism
  - decomposition of a task into the problems that may be processed in parallel
  - usually more complex tasks performing different actions
  - usually more frequent (and complex) synchronization
  - ideal for small number of high-performance processors
- Data parallelism
  - parallelism on the level of data structures
  - usually the same operations on many items of a data structure
  - finer-grained parallelism allows for simple construction of individual processors

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code
Why are G	PUs so now	erful?		

From programmer's perspective

- some problems are rather data-parallel, some task-parallel (graph traversal vs. matrix multiplication)
- From hardware perspective
  - processors for data-parallel tasks may be simpler
  - it is possible to achieve higher arithmetic performance with the same size of a processor
  - simpler memory access patterns allow for high-throughput memory designs

About The Class	Motivation	GPU Architecture ○○●○○○○○○	C for CUDA	Sample Code
GPU Archite	cture			

DRAM					
GPU					

▲□▶ ▲□▶ ▲目▶ ▲目▶ 目 のへの

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code
GPU Archite	cture			

Main differences compared to CPU

- high parallelism: hundreds thousands threads needed to utilize high-end GPUs
- SIMT model: subsets of threads runs in lock-step mode
- distributed on-chip memory: subsets of threads shares their private memory
- restricted caching capabilities: small cache, often read-only

Algorithms usually need to be redesigned to be efficient on GPU.

About The Class	Motivation	<b>GPU Architecture</b>	C for CUDA	Sample Code
GPU Archit	ecture			

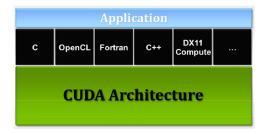

Within the system:

- co-processor with dedicated memory (discrete GPU)
- asynchronous processing of instructions
- attached using PCI-E to the rest of the system (discrete GPU)

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code
CUDA				

CUDA (Compute Unified Device Architecture)

- architecture for parallel computations developed by NVIDIA
- provides a new programming model, allows efficient implementation of general GPU computations
- may be used in multiple programming languages

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code
G80 Proces	sor			

### G80

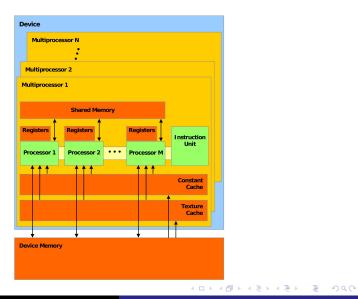

- the first CUDA processor
- 16 multiprocessors
- each multiprocessor
  - 8 scalar processors
  - 2 units for special functions
  - up to 768 threads
    - HW for thread switching and scheduling
  - threads are grouped into warps by 32
    - SIMT
  - native synchronization within the multiprocessor

About The Class	Motivation	GPU Architecture ○○○○○○●○	C for CUDA	Sample Code
G80 Memory	Model			

Memory model

- 8192 registers shared among all threads of a multiprocessor
- 16 kB of shared memory
  - local within the multiprocessor
  - as fast as registry (under certain constraints)
- o constant memory
  - cached, read-only
- texture memory
  - cached with 2D locality, read-only
- global memory
  - non cached, read-write
- data transfers between global memory and system memory through PCI-E

About The Class	Motivation	GPU Architecture	C for CUDA •0000	Sample Code
C for CUDA				

C for CUDA is an extension of C for parallel computations

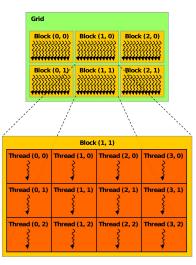

- explicit separation of host (CPU) and device (GPU) code
- thread hierarchy
- memory hierarchy
- synchronization mechanisms
- API

About The Class	Motivation	GPU Architecture	C for CUDA ○●○○○	Sample Code
Thread Hierarchy				

Thread hierarchy

- threads are organized into blocks
- blocks form a grid
- problem is decomposed into sub-problems that can be run independently in parallel (blocks)
- individual sub-problems are divided into small pieces that can be run cooperatively in parallel (threads)
- all threads from a block run on the same multiprocessor
- scales well

Thread and	l Block Ider	tification		

C for CUDA has built-in variables:

- threadIdx.{x, y, z} tells position of a thread in a block
- blockDim.{x, y, z} tells size of the block
- **blockldx**.{**x**, **y**, **z**} tells position of the block in grid (z always equals 1)
- gridDim.{x, y, z} tells grid size (z always equals 1)

GPU Memory	y Manager	nent		

Using managed memory, CUDA maintains memory transfers between CPU and GPU automatically.

• memory coherency is guaranteed

• GPU memory cannot be used when any GPU kernel is running Memory operations can be programmed explicitly

```
cudaMalloc(void** devPtr, size_t count);
cudaFree(void* devPtr);
cudaMemcpy(void* dst, const void* src, size_t count,
    enum cudaMemcpyKind kind);
```

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code ○○○○○○○●○○				
An Example – Sum of Vectors								

Running the kernel:

- kernel is called as a function; between the name and the arguments, there are triple angle brackets with specification of grid and block size
- we need to know block size and their count
- we will use 1D block and grid with fixed block size
- the size of the grid is determined in a way to compute the whole problem of vector sum

For vector size divisible by 32:

```
#define BLOCK 32
addvec<<<//pre>/BLOCK, BLOCK>>>(a, b, c);
```

How to solve a general vector size?

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code ○○○○○○○○●○
An Exampl	e – Sum of	Vectors		

## We will modify the kernel source:

```
__global__ void addvec(float *a, float *b, float *c, int n){
    int i = blockIdx.x*blockDim.x + threadIdx.x;
    if (i < n) c[i] = a[i] + b[i];
}</pre>
```

## And call the kernel with sufficient number of threads:

```
addvec \ll N/BLOCK + 1, BLOCK >>>(a, b, c, N);
```

. . . . . . . .

About The Class	Motivation	GPU Architecture	C for CUDA	Sample Code ○○○○○○○○●				
An Example – Running It								

Now we just need to compile it :-)

nvcc -o vecadd vecadd.cu

Where to work with CUDA?

- on a remote computer: airacuda.fi.muni.cz (more machines will appear), accounts will be made
- your own machine: download and install CUDA toolkit and SDK from developer.nvidia.com
