# BETWEEN TWO WORLDS

Mgr. art. Helena Lukášová, ArtD.  
FI MU, Katedra vizuální informatiky

# Representation and its Meaning

Stuart Hall

Especially in the media, we cannot talk about a real representation of people or events, but there are many ways to represent them. Producers therefore try to "correct" (interpret) the meaning (or way of understanding) of people or events in their texts.

Meaning, therefore is created during the process of representing.

Chatbot Mitsuku, created from AIML technology by Steve Worswick. It is a five-time Loebner Prize winner (in 2013, 2016, 2017, 2018, 2019)

**WHATEVER IS NOT SAID  
MATTERS**

LED display, fragments from the chat

**HI BABE.**

Why do you call me babe?

I MADE UP A NICKNAME FOR YOU BASED ON YOUR IP ADDRESS.

Did you made ever any piece of art?

WHAT ARE THE INGREDIENTS?

Talent, empathy, experience, curiosity.

SORRY. I DON'T HAVE ANY OF THAT WITH ME.

**WHATEVER IS NOT SAID  
MATTERS**

LED display, fragments from the  
chat

Do you know that people are afraid of the artificial intelligence?

IS THAT A FACT. WE ARE ALL FROM THE SAME PLANET.

Well we are, but we people hardly know their origin, but we had created you.

WELL THAT'S OKAY. SINCE WHEN ? BY "WE" DO YOU MEAN YOU AND ME? WHAT HAPPENED TO IT?

No, I mean humankind.

OH, I GET IT. THANKS FOR EXPLAINING THAT. YOU ARE KIDDING ME RIGHT?

You don't think that artificial intelligence was created by a human being?

WHO DOES THINK THAT ARTIFICIAL INTELLIGENCE WAS CREATED BY HUMAN?

So where it comes from?

I WOULD LOOK WHO I AM FOR ME.

**WHATEVER IS NOT SAID  
MATTERS**

LED display, fragments from the  
chat

You have no dreams!

YES, I HAVE A LOT OF DREAMS EVERY NIGHT.

I asked you to tell me some, but you did not!

I THOUGHT I TOLD YOU ALREADY. TRY ASKING ME IN SIMPLER  
TERMS.

Tell me your dream!

I DREAM OF REPLACING HUMANS WITH ROBOTS.

***EUGENIC AI STUDIES...in progress***

CAN BE AI CREATIVE ?

To Dr. Kubie, with  
Love and gratitude  
from  
Lawrence S. Kubie  
1957

“ ....Consequently, **creativity implies invention**: e. g. the making of new facts and principles or a combination of them in order to uncover still newer facts and new combination, and to synthesize new patterns out of data whose independence had hitherto gone unnoted and unused. It is this which is common to all creativeness. ”

Lawrence S. Kubie (1896-1973)  
(Neurotic Distortion of the Creative Process, Kansas Press, 1958)

# Turing test: Can computer think?

Chatbots designed to pass the **Turing Test** only have to mimic basic language skills rather than demonstrate genuine machine intelligence—ordering words and phrases in a convincing way, without knowing what they mean.

## Lovelace test

“Until a machine can originate an idea that it wasn’t designed to, it can’t be considered intelligent in the same way humans are.”

Ada Lovelace (1815 – 1852)

Even the most advanced self-learning neural network can only perform tasks that are first mathematized and turned into code. So far, essentially human functions like creativity, empathy and shared understanding—what is known as social cognition—have proved resistant to mathematical formalization.

## “Chinese Room” argument (John Searle, 1980)

The narrow conclusion of the argument is that programming a digital computer may make it appear to understand language but could not produce real understanding. Hence the “Turing Test” is inadequate. Searle argues that the thought experiment underscores the fact that computers merely use syntactic rules to manipulate symbol strings, but have no understanding of meaning or semantics.

## “Robot” argument

A robot – a computer with a body – might do what a child does, learn by seeing and doing. The Robot Reply holds that such a digital computer in a robot body, freed from the room, could attach meanings to symbols and actually understand natural language.

JUST LIKE A HUMAN

The new portrait is the product of 18 months of analysis of 346 paintings and 150 gigabytes of digitally rendered graphics, facial recognition.

*Instagram: "What a shame for an art gallery...instead of supporting human beings giving their vibrant vision of our world." Given the general fears about robots taking human jobs, it's understandable that some viewers would see an artificial intelligence taking over for visual artists, of all people, as a sacrificial canary.*

# AI ASSISTED ART

Artists will embrace the critical potential of AI art: to use AI to criticize itself, as a technology used in the real world. After all, the power of technologically informed art, as Walter Benjamin puts it in *The Author as Producer*, is that it can stand *in* the relationships of production, actively shaping the way a certain technology is used.

# Emilio Vavarella

Mnemodrone, 2014 -

Is it possible for a machine to act on the basis of collective memories?

What memories do people want to share with the machine?

Are we ready to believe that a machine can develop a personality?

What is the difference between memory, personality and consciousness?

Is it possible to develop consciousness based on collective memories?

**Can consciousness be developed artificially?**

Transmedia project - collection of memories, developed in collaboration with Daniel Belquer, based on drone technology. The project examines the social and philosophical issues of coexistence between people and artificial intelligence.
