Service Dominant Logic and asymmetric information

PA194

© Leonard Wallezký

In previous lessons

Asymmetric information

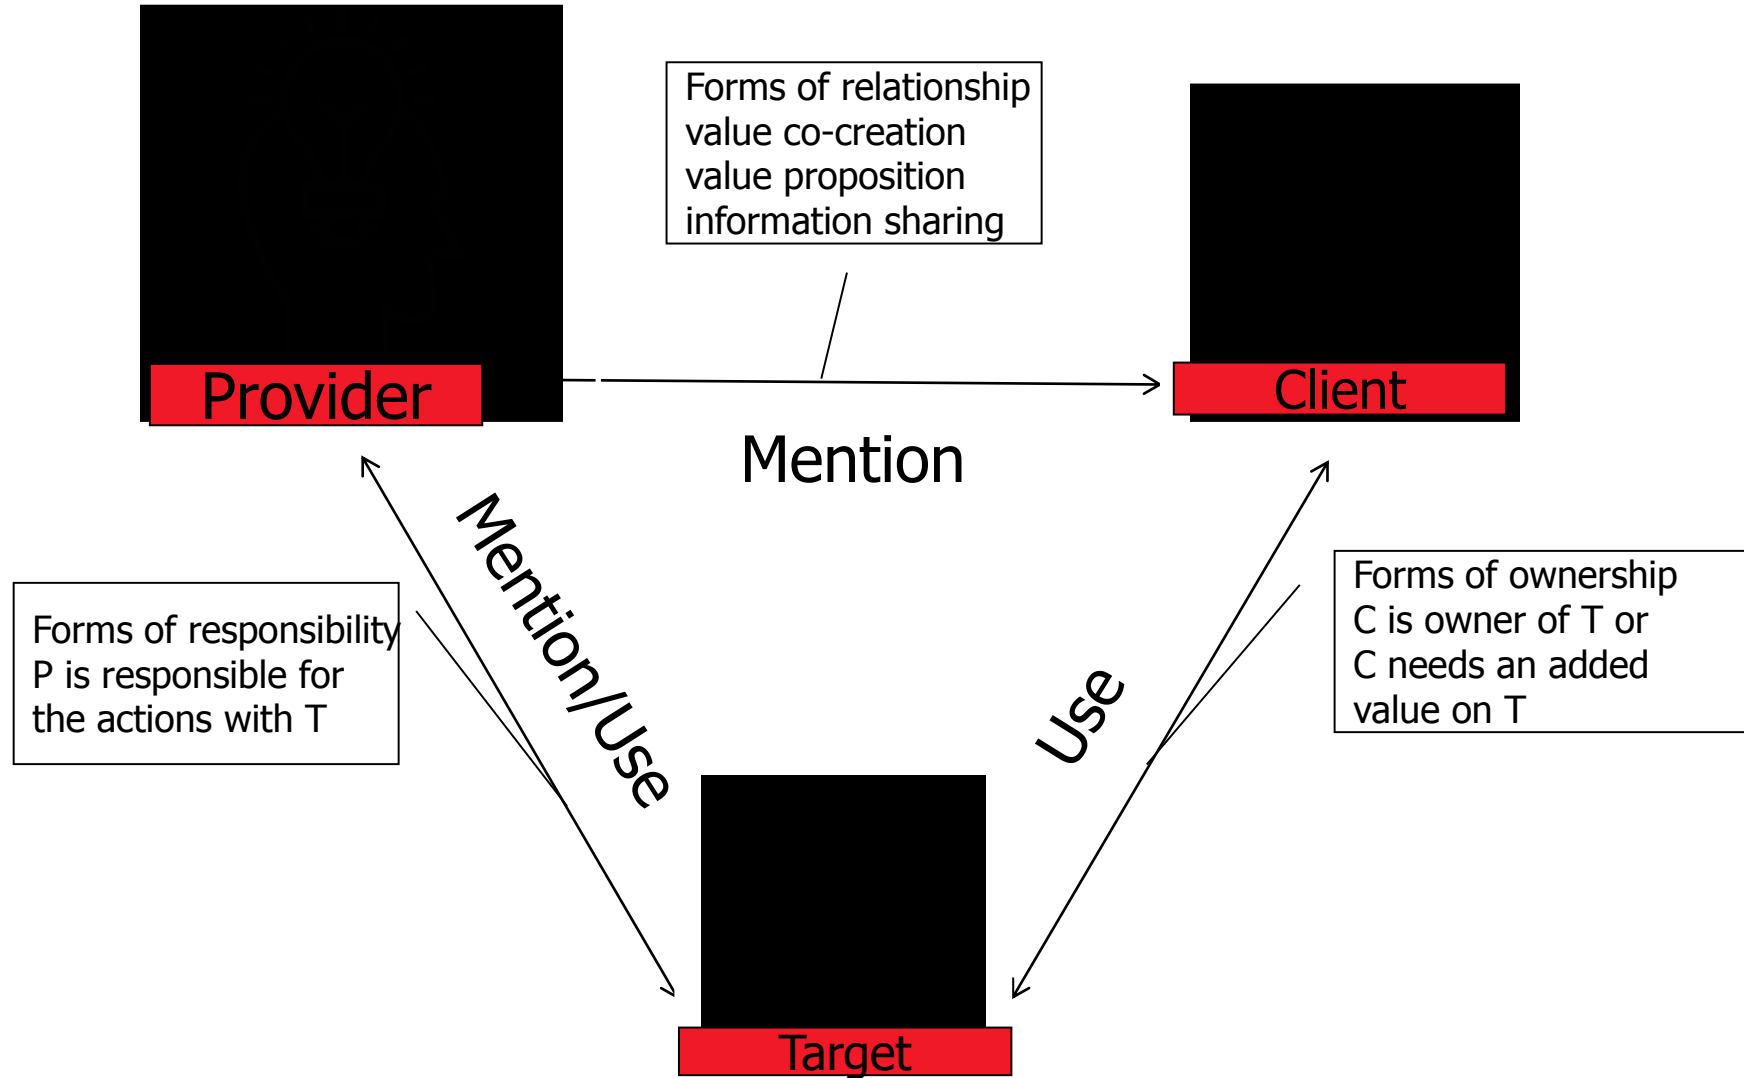

Information gap

Filling the information gap

Role of IT in filling the gap

Role of government on information market

Mention - Use

Problem of moral hazard

a tendency to take undue risks because the costs are not borne by the party taking the risk

The customer is able to affect an event he is insured against, but the seller has no power to monitor or affect this event.

- ERP supplier has limited information about customers IT security
- Provider has limited information about the basement of the real client's problem

Double moral hazard

- Client does not know if the provider is able to operate on the particular target

Double moral hazard

Illusion of value proposition

Provider is not able to see the basis of target

Client is not able to see the benefits of the cooperation

Both are motivated to share information and knowledge

Value proposition can not be set up

Value

Value proposition is hidden

- is hidden by the hill

Hierarchy of barriers hiding the target

- have to be overcome step by step
- leads to process of value estimation

Value can not be proposed

It can be only estimated

- is used to find value proposition
- there is not a target, only target area
 - target area is the space of all sub-targets, corresponding with particular value estimation

Value estimation

modified by the value co-creation process

motivated by the decreasing of the level of information asymmetry of both parties

the process is about particularize of value estimations

till the moment of founding the value proposition

Value proposition

can be found in the moment client and provider can see the target

- share the same point of view
- both can see the utility level
- and share as well

both partners agree with concrete mutual criteria of success

- variables to test
 - no of customers
 - profitability
- target values
 - number of customers rise of 30%
 - profitability rises more than 10%

Value proposition

Costs of value estimation

must be shared and paid

- problem is complex
- must be understood and explored

provider must be paid for using his sources to do it

Client is paying for the analysis of the target area

Management of Service company

A lot of new methodologies inspired by services

New business models

Switch from Business model Canvas to Lean Canvas

Lean Canvas

PROBLEM <i>List your top 1-3 problems.</i>	SOLUTION <i>Outline a possible solution for each problem.</i>	UNIQUE VALUE PROPOSITION <i>Single, clear, compelling message that states why you are different and worth paying attention.</i>	UNFAIR ADVANTAGE <i>Something that cannot easily be bought or copied.</i>	CUSTOMER SEGMENTS <i>List your target customers and users.</i>
EXISTING ALTERNATIVES <i>List how these problems are solved today.</i>	KEY METRICS <i>List the key numbers that tell you how your business is doing.</i>		CHANNELS <i>List your path to customers (inbound or outbound).</i>	
COST STRUCTURE <i>List your fixed and variable costs.</i>		REVENUE STREAMS <i>List your sources of revenue.</i>		

Service Practices, Outcomes and Institutionalization

A service interaction has always an outcome.

An interaction can reach a value co-creation point, and each party gains benefit from the service interaction.

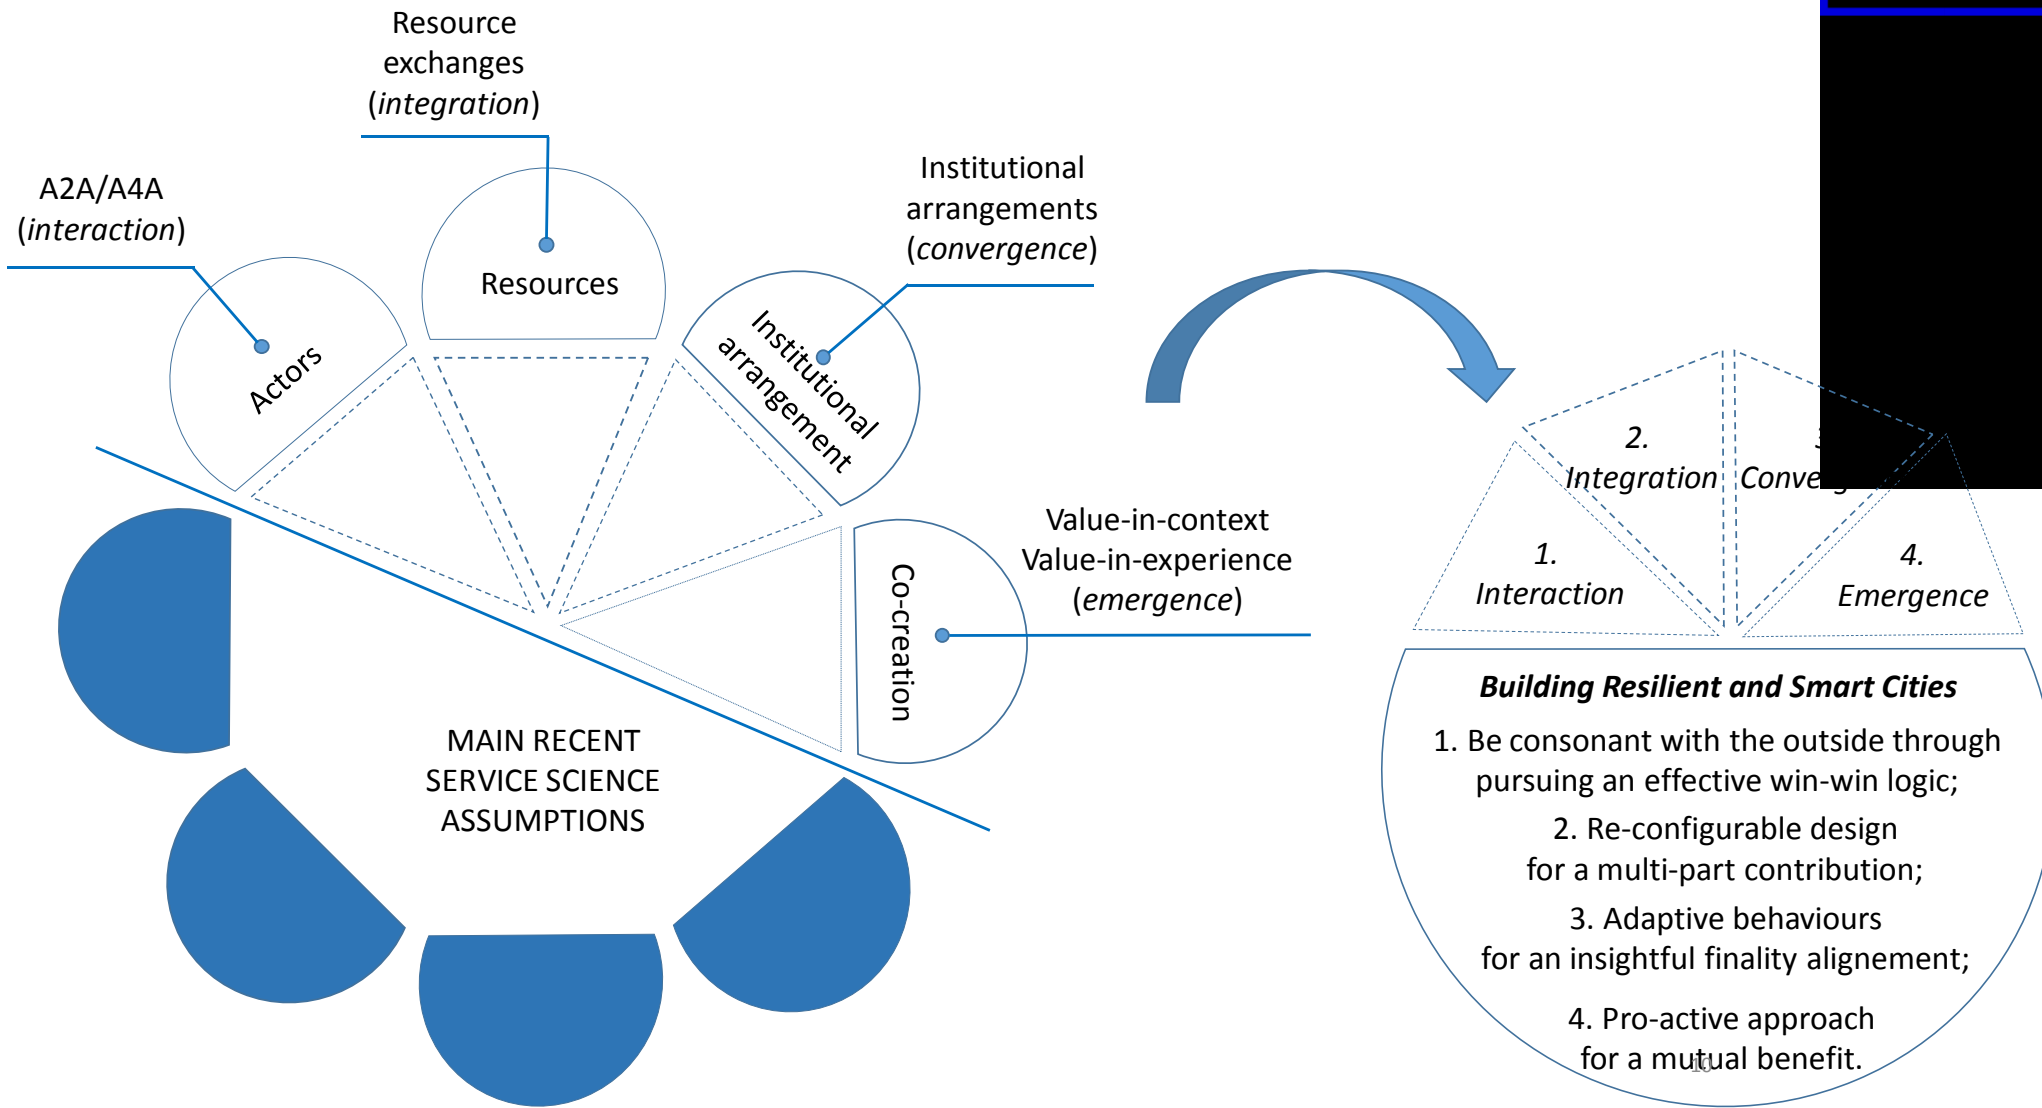

Sometimes, the service interaction acts the context, in terms of environment, society, or nation.

Value co-creation and value co-creation processes.

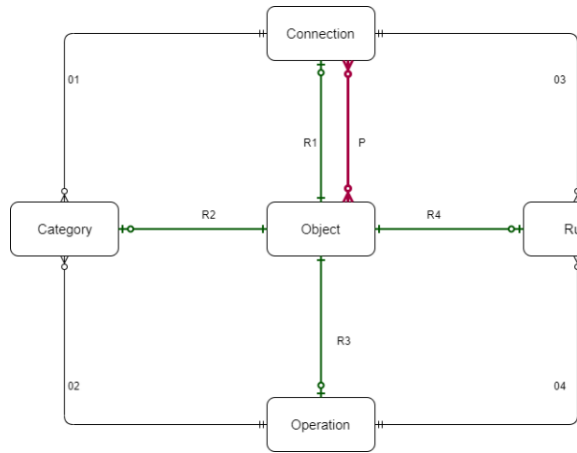

In the Service Science perspective, value co-creation is a holistic view.

Mainly, it refers to the process of resource integration, where customer resources are integrated with different resources provided from various sources (market, private and public)

and are used for value creation with all involved parties

Smart Service Canvas

Case study

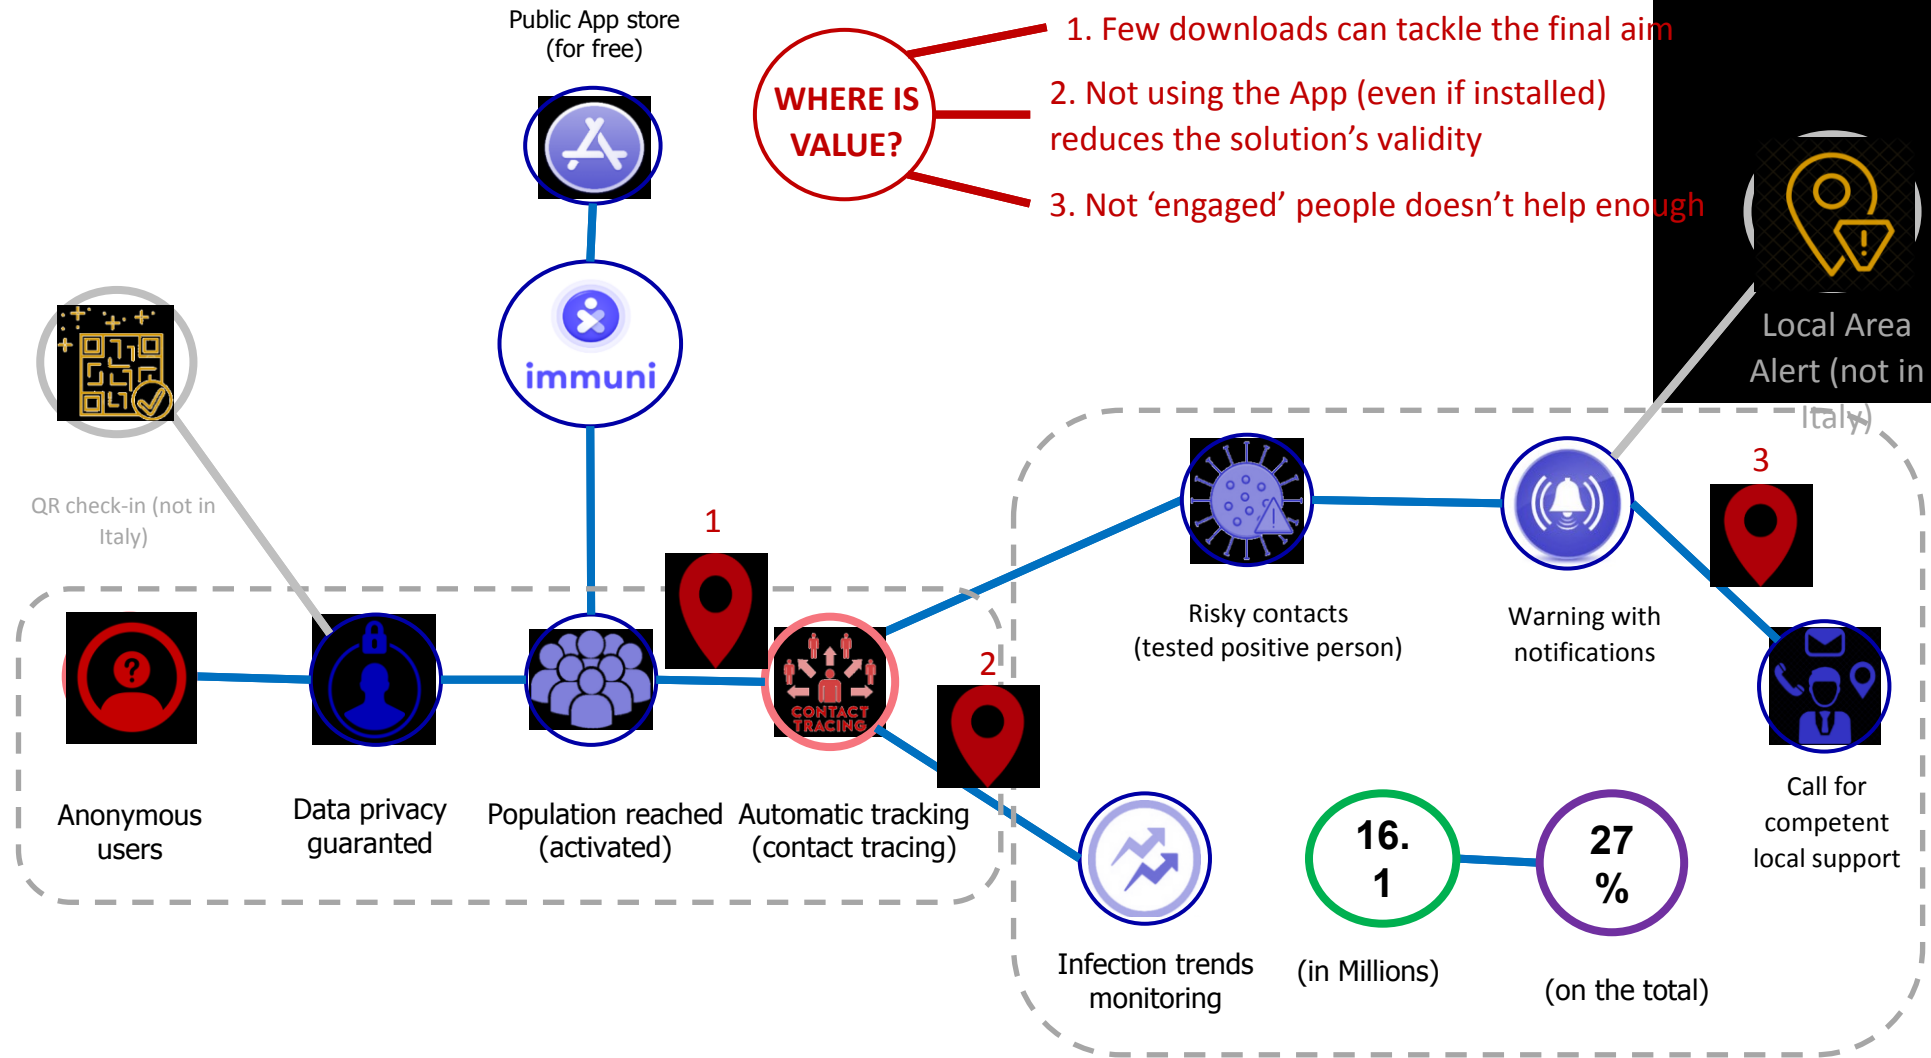

Case study

The application of immuni (ITALY)

First, the value of current application is analyzed

Second, the design of „an ideal application“ is suggested with the examples of the value

Case study

Goals

1. To monitor a spread of covid-19.
2. To prevent covid-19 infection.
3. To help people to get oriented.
4. To protect non-infected people
5. To enable normal life

CHECKED

Requirements

1. To inform about the contacts
2. To provide information about current situation

PARTIALLY-CHECKED

Agents

1. Inhabitants
2. Medical institutions
3. Sanitary stations

PARTIALLY-CHECKED

Value

MISSED

Contexts

1. Medical – the key is to prevent the congestion of hospitals
2. Social – people need to understand why they must be isolated

PARTIALLY-CHECKED

Endowment

1. Information about test results

PARTIALLY-CHECKED

Use-cases

1. Are All Covid -19 applications

CHECKED

Value

1. To be informed about the possible infection
2. To know what to do

PARTIALLY-CHECKED

Actions

1. Send warning – this actions happens if the user is infected. The users who were in contact with him/her will be warned.

PARTIALLY-CHECKED

Flows

1. To monitor surrounding
2. To receive positive test information

PARTIALLY-CHECKED

Activities

1. Detect all close devices
2. Send information to sanitary station
3. Receive information about positive contacts

PARTIALLY-CHECKED

Measures (MPI)

1. No. of installations
2. No. of informed users

PARTIALLY-CHECKED

Goals

1. To monitor a spread of covid-19.
2. To prevent covid-19 infection.
3. To help people to get oriented.
4. To protect non-infected people
5. To enable normal life

CHECKED

Requirements

1. To inform about the contacts
2. To provide information about current situation
3. To link to register of tests and vaccination

PARTIALLY-CHECKED

Agents

1. Inhabitants
2. Medical institutions
3. Sanitary stations
4. Business entities – will use the app to confirm the person health status

PARTIALLY-CHECKED

Value

1. The interaction based on information sharing (the confirmation about healthy status)
2. The control on the vaccination and testing

MISSED
CHECKED

Contexts

1. Medical – the key is to prevent the congestion of hospitals
2. Social – people need to understand why they must be isolated
3. Economic – to enable economy to run

PARTIALLY-CHECKED
CHECKED

Endowment

1. Information about test results
2. Information about the vaccinations
3. Control of private data

CHECKED-CHECKED

Use-cases

1. Are All Covid -19 applications

CHECKED

Value

1. To be informed about the possible infection
2. To know what to do
3. To get proper date and place for tests and vaccination

CHECKED-CHECKED

Actions

1. Send warning – this actions happens if the user is infected. The users who were in contact with him/her will be warned.
2. Get the status – get the current health status from register
3. Connect to register – connect to the register of test and vaccination

PARTIALLY-CHECKED
CHECKED

Flows

1. To monitor surrounding
2. To receive positive test information
3. To monitor the validity of test and vaccination

CHECKED-CHECKED

Activities

1. Detect all close devices
2. Send information to sanitary station
3. Receive information about positive contacts
4. Get the information about new test or vaccination

CHECKED-CHECKED

Measures (MPI)

1. No of installations
2. No. of informed users
3. No. of tests linked with app
4. No of vaccinations linked with app
5. No. of questions

Conclusion

Information asymmetry and its role in service system

Value estimation

Smart City services are complex services that integrate various activities developed with the participation of various stakeholders evolving in various contexts.

Their contexts must be analyzed, understood, integrated, and managed collectively.

It is important to explore further how to integrate various aspects of value, such as value-in-use, value-in-context, and value-in-experience in the design of the services within their environment.
