Materials and figures adapted from the COST meeting, for internal use only.

6G – Connected Intelligence

Huawei – white paper

<https://www-file.huawei.com/-/media/corp2020/pdf/tech-insights/1/6g-white-paper-en.pdf?la=en>

6 G – Connected Intelligence

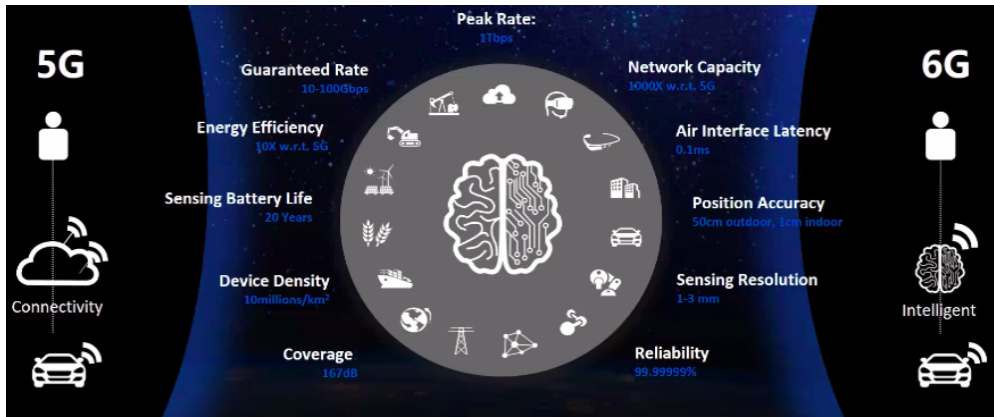

The 6 G Pillars

- **Pillar 1: New Communication Paradigm** – reliable, low latency, high efficient connectivity based on **machine learning**
- **Pillar 2: Integrated Sensing and Communications** – networks as sensors (NLOS¹ joint sensing with gNB² and UE)
- **Pillar 3: Ultimate Connectivity Supremacy** – peak data rate 1 Tbps, battery life 20 years, sensing resolution 1-3mm, latency 0.1 ms (new eMBB, mMTC, URLLC, new sensing, all being controlled by **Intelligence**)
- **Pillar 4: NTN³ integration** – inter-satellite 600 km, satellite-to-terrestrial 300 km
- **Pillar 5: Native Trustworthiness** – Quantum resisted security, block-chain, QKD and quantum switching key distribution compatible
- **Pillar 6: Sustainability and Humanity Good** – need to establish and industry consensus on the methodology for the evaluation of sustainability

¹ Non-line of sight

² 3GPP 5G Next Generation base station

³ NTN – Non-Terrestrial Networks

New Communication Model

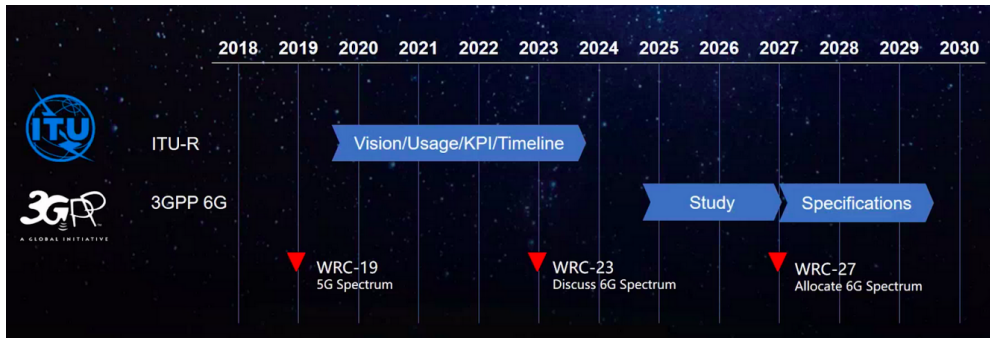

DNN Model as a Communication Object – as Compressor, Data Operator, Data Memory, Data ID

For 6 G ISP – **the AI model more important than data**, the model can be exchanged over networks while data can be kept at local

Distributed Learning Model for 6 G – federated learning, distilled learning

6G and Timeline

Current research overview – examples

CNIT / WiLab

- AI-Enabled Massive URLLC⁴ for Inter-Machine IIoT⁵ Applications – distributed machine learning
- Non-orthogonal Resource Allocation Techniques for Sidelink Cellular – Vehicle to Everything (V2X)
- Radio signal analysis – to gain information about target objects or environment
-

Ottawa Wireless Advanced System Competency Center

- 3D Networks – UAVs flying over cities acting as BSs

JLab

- Proactive link selection in high frequencies IoVs⁶ network – sensor sharing

And many more – over 100 papers published and available as TDs

⁴ Ultra-Reliable Low-Latency Communication

⁵ Industrial Internet of Things

⁶ Internet of Vehicles

The trends in networking and ML

- NETWORK ARCHITECTURES
- **NETWORK PLANNING AND ORCHESTRATION**
- ML approaches for planning and orchestration
- NETWORKING FOR ML

In cooperation with Connected Experience Lab (ConExLab) – Institute of Information Systems (IIG), University of Applied Sciences of Western Switzerland – HES SO Valais

The personal inside view of possible research

WG3 – Network Architectures and Protocols

- Protocols enabling cooperation of 6 G IIoT and cloud systems for high adaptability, low latency employing Machine Learning
- Network Architectures for 6 G enabled transit core network
- ...

Leaflet

<https://bit.ly/3DQgzHb>

The screenshot displays the website's navigation menu at the top, including links for INTERACT, COST, ABOUT, WGS, MEETINGS & EVENTS, GRANTS, PUBLICATIONS, MEDIA, and MEMBER AREA. Below the menu is a large banner image featuring the word 'Leaflet' in a large, white font, with 'AI' written below it. The background of the banner shows two hands, one human and one robotic, reaching towards each other against a dark blue background with glowing circuitry and data points.

Below the banner, two versions of the leaflet are shown side-by-side:

- Leaflet - Colour version:** A full-page leaflet with a colorful design, featuring the title 'COST CAI def d ACTION PROJECT SUMMARY' and a large image of hands. It includes sections for 'ABOUT COST INTERACT' and 'CONTACT US'.
- Leaflet - Print version B/W:** A black and white version of the leaflet, designed for printing. It contains the same text and layout as the color version but with a monochromatic color scheme.
