

Trine - game observation

Enchanted Edition

Trine is a 2.5D cooperative platformer with lots of interesting puzzles and mechanics. The whole franchise consists of 5 individual games.

This game can be played solo or with group of 3 friends. This is the first game anchor that I really like, because the most of coop games are only for two people.

Lets dive into game mechanics now. As I mentioned earlier, the game is for 3 players, so you need 3 characters. You can choose between Mage, Thief and Warrior. Each character has special abilities that can be used to solve puzzles or fight enemies.

Lets talk about the Mage, because I think he has the most interesting character design. The mage use his magic to create objects or move with some interactive objects. Creating an object is pretty interesting and unique I would say. To create cube, you need to draw rectangle with your mouse. For platform you draw just a line.

The game has a fantastic story, soundtrack and graphics and its pretty fun if you playing with friend.
