Ghostrunner

Ghostrunner is a single-player fast-paced hardcore slasher set in cyberpunk setting.

In Ghostrunner the campaign takes about three hours to finish, but after finishing there are some new game modes, DLC, and even the campaign itself can be replayed.

In the game, there are parts of the level focused on platforming and part of the level focused on combat. The platforming is very linear but the combat has plenty of ways you can approach it.

I am definitely the target audience. I like every aspect of the game and I would recommend it to everyone.
