abstrakt
This article explores cyberspace as a site in which women who are struggling with anorexia can find sanctuary from the surveillance of the public sphere. Feminist geographical and sociological work on the body and critical analysis of medical and psychiatric discourses
This article details the making of community and bodies in online environments, specifically the online pro-anorexia community. Building community among members of these groups is particularly fraught because tensions over claims to authenticity permeate these groups.
In recent years, websites that stress the message of thinness as the ideal and only choice have surfaced on the internet. The possibility that pro-anorexia websites may reinforce restrictive eating and exercise behaviors is an area of concern. In addition, friends may be
Pro-eating disorder (Pro-ED) Websites are widespread and easily accessible. The risks associated with these Websites (e.g., reinforcing and encouraging eating disordered behaviors) have received interest from researchers, media, and mental health
There has been a great deal of social theory written about how groups form and affect members in the offline world, but less research about how online groups can affect the behaviors and identity of the individuals who choose to participate in them. Pro-anorexia,
This study explores the personal experience of pro-ana bloggers, members of an online community for people with eating disorders. Using Erving Goffman's work on stigma, this study explores the motivations, benefits, and drawbacks of blogging about a stigmatized
One of their functions of online mental health communities is the construction of coherent identities for their members based on the various characteristics of different mental health conditions. This paper contains microanalyses of 2 message threads on mental health
This study examines how members of pro-anorexia (PA) and fat acceptance (FA) cybercommunities manage their ascribed 'offline' socially marginalised identity in an 'online' environment. While much of the sociological literature continues to focus on the
Purpose: To analyze the content and culture of anorexia nervosa (AN)-related communication on the current major social network site (SNS) Facebook. **Methods:** We searched for groups and sites related to AN on Facebook by means of a faux
The aim of this research was to document the content on pro-ana blogs and to uncover how the unique socio-technical features of blogs (interactivity, self-disclosure, masspersonal communication) facilitate social support among members. A final sample of
The pro-anorexia community has emerged as a powerful cultural movement that takes an at least partially positive attitude toward anorexia nervosa and other eating disorders. A systematic review of the literature on pro-ana forums focused specifically on females with
In this study, we investigated the emotional processing of extremely emaciated body cues in adolescents and young adults with (n = 36) and without (n = 36) anorexia nervosa (AN), introducing a new picture type, which was taken from websites that promote extreme
Objective: To determine if females with anorexia nervosa (AN) associate emaciation with beauty by examining implicit attitudes toward emaciated bodies relative to thin bodies. **Method:** Thirty women with AN and 29 healthy control women were primed by viewing
Objective: Links between media portrayals of celebrities and participation in activities related to anorexia are of interest to both researchers and practitioners but are difficult to study over long time periods and in large populations. Here we aim to determine the links
Objective: "Pro-ana" or Thinspiration websites are internet sites that support weight loss and eating disorders. Fitspiration websites are a newer type of site that supposedly advocates a fit and healthy lifestyle.
Objective: Smartphone applications (apps) are proliferating and healthrelated apps are particularly popular. The aim of this study was to identify, characterize, and evaluate the clinical utility of apps designed either for people with eating disorders or for eating disorder
Illness narratives have been studied to understand the patient's point of view. These narratives are becoming more prolific, accessible, and specialized, thanks to the improved Internet access and the growth of health-specific online communities. This article analyses
Media scholars often use concepts from Goffman's dramaturgical approach to study online communities of stigmatized individuals as "backstages," spaces where members take refuge from social disapproval. In this study, I extend this view through an examination of in-depth
