Two Fanatic World of Warcraft Gamers Have Died Because Of WoW

Are there more to come?

The recent deaths of two net gamers have once again raised the issue of the impact o addiction on the online gaming community, and the health risks involved.

S Korean dies after games session

A South Korean man has died after reportedly playing an online computer game for 50 hours with few breaks.

Online gaming is treated like a sport in South Korea

The 28-year-old man collapsed after playing the game Starcraft at an internet cafe in the city of Taegu, according to South Korean authorities.

The man had not slept properly, and had eaten very little during his marathon session, said police.

IDENTITIES!

A comic book panel showing Superman in his classic blue suit with a red cape and yellow belt, flying through a window. He is holding a white dog in his arms. The dog is also flying through the air. The background shows a cityscape with buildings and a window with a view of a city. Two speech bubbles are present. The first speech bubble is at the top left, and the second is at the bottom left.

Does Media Violence Predict Societal Violence? It Depends on What You Look at and When

Does Media Violence Predict Societal Violence? It Depends on What You Look at and When

- Meta-analytical studies show very small correlations about $r = .1$
- Not surprising in complex systems
- But surprising because it does not agree with case studies
- Example: effect of scary media content on fear reaction of small children: generally small $r = .18$, but number of clinical case studies showed extreme reactions (Pearce & Field, 2015).

Exemplary Meta-analyses of Media Effects

| Study | Type of media use | Outcome | <i>r</i> |
|---------------------------------|-------------------------------|----------------------------|------------------|

| | Online news use | Political engagement | .13 |

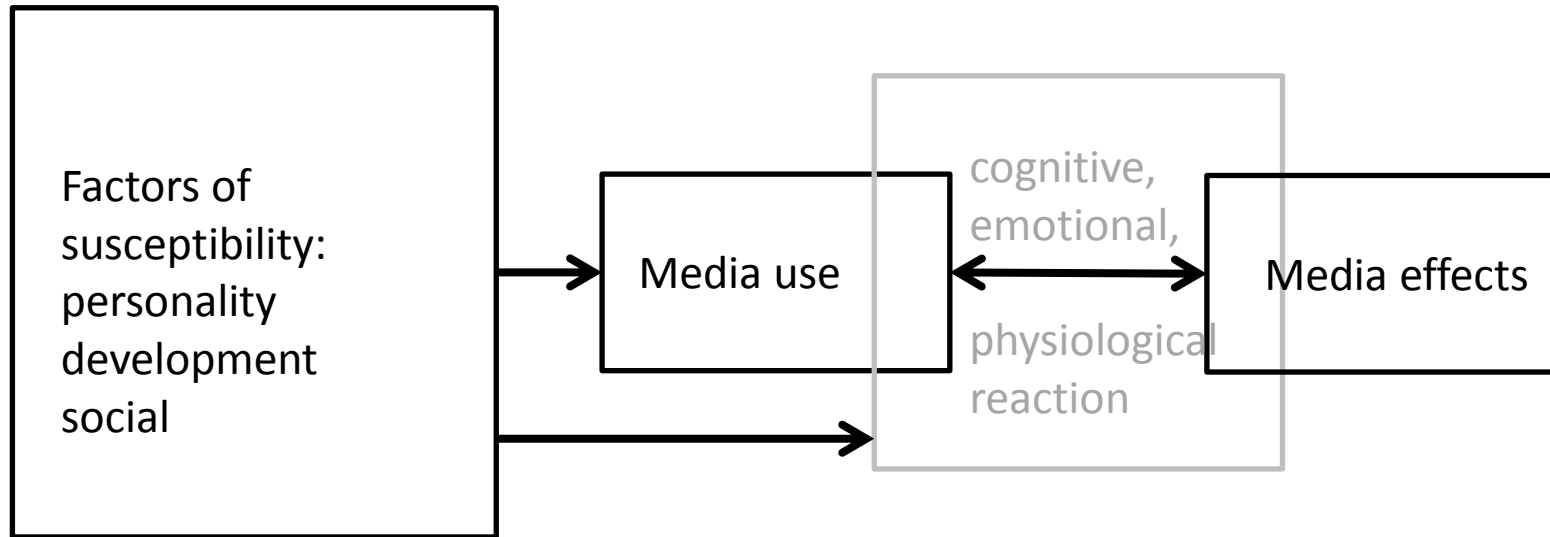

MIXED MEDIA EFFECTS

Schramm, Lyle, Parker, 1961

For some children under some conditions some television is harmful.

For other children under the same conditions or for the same children under other conditions it may be beneficial.

For most children under most conditions, most television is probably neither particularly harmful nor particularly beneficial.

- Valkenburg, P. M., & Peter, J. (2013). The differential susceptibility to media effects model. *Journal of Communication*, 63(2), 221-243.
