

CJVA402 Academic Presentations and Other Study Skills

Summary

David Christian is talking about the physical history of our world. He doesn't mention only the history of the Earth but of the whole universe. One of the crucial points of the video is that the whole universe, as well as our planet the Earth and our life has been created from simplicity to the complexity. The second main point of the video is that human beings are different from other species because of a collective learning. People are able to carry information from our history and therefore learn a lesson from our faults. The DNA, the main carrier of that information, when copying itself sometimes comes to an error. Hence, it is accumulating new ways of life, bringing better diversity. Collective learning can be as good for us as dangerous. Everybody should learn the world history so that they know the power of collective learning.

Nicely done, a very effective summary. Great vocab.
