

## Summary:

David Christian in his speech pointed out almost the whole history of the universe. If I am saying univers, the mankind history wa included. From the beginning he wants us to understand the balance between complexity and fragility.

The main aim was to show us the treshold moments, which were modify the history such as The big bang, creation of the stars, creation of the DNA, animals, extinction of the dinosaurs, creation of the human etc. Those events led to the complexity of our (human) brains. David identified the collective brain as the most powerful and complex thing all around the world.

In conclusion this video offers the big question: „Can we control our collective brain?“ It means that we as humans own the resources to basically destroy mankind. Is this dangerous? Let's see in the future.

Great effort, look at my coments to see the problems with academical English. Nice grasp of the video, good vocabulary.
