

The video describes creation of complexity - complexity of universe and mostly complexity of life itself. The speaker pointed out that from the perspective of human being (one of the most complex objects in the universe) it is very important to understand how such complexity is born. The evolution of complexity is demonstrated on several thresholds throughout the history of universe.

The first threshold is the moment universe was born – The Big Bang, throughout the video there are six more – ending with the modern revolution. Modern revolution was also marked as the main sign of collective learning which is privilege of humankind and the most important distinction between humans and other entities. The video should probably serve as a warning against abuse of collective learning and knowledge.

Good job, good vocabulary. Would advise to use more linkers to connect your ideas in general.
