

## Task 2

Take two countries or regions/counties in a country and calculate the crude death rates and standardized death rates for that population. You may calculate either for the whole population or only for men/women. Use the Excel file for Czechia as an example. You will need some input data: number of deaths by age and number of people by age.

Please submit the task in the Information System  
[https://is.muni.cz/auth/el/fss/jaro2022/SOCb2020/ode/weekly\\_tasks/task\\_2/](https://is.muni.cz/auth/el/fss/jaro2022/SOCb2020/ode/weekly_tasks/task_2/)

**Deadline: 15<sup>th</sup> of March 2022**
