

Las Vegas is the largest city in state Nevada in USA. This city is typically considered to be a sin city and city of entertainment. A nice example of zone could be part of main Las Vegas Boulevard – The Strip. This part is 7,2 km long and we can find here all the famous hotel complexes, huge casinos and strip clubs. In first third of 19. century there were just meadows when Spain discovered this place. Mormons established a settlements here and Las Vegas begun to profit from heavy industry. Impuls for development of city was a construction of Hoover Dam – in Las Vegas should have been place for rest for workers. In 1931 there was legalized gambling and first casinos and hotels in Las Vegas were built. But owners of casinos found a huge network of mafia which controled the city for years. Las Vegas Strip is special because of specific laws – it is legal to walk around on The Strip with alcohol, there is allowed prostitution. So we can see this place has its own kind of sovereignty. The Strip is place for many foreign investments. I think the spirit of globalization is easy to find in all worldwide famous monuments – Eiffel tower, Statue of Liberty, Fountain di Trevi, Golden Gate Bridge etc. We can find here also the most important hotels like Bellagio, Hilton or Trump.
