

Feedback for Goran Vujnovic's paper

The title of this paper is very interesting to me. I think it has absolute sound meaning as title has two parts including (1) influence of religion and culture and (2) integration. Here first part seems independent variable and another dependent.

This paper has identified the background properly especially problems. It is considered as a current problem. There are also specific questions related to problems and solutions. This paper identifies the research questions related to education systems, institutional problems-mosque, problems of folkways-clothing and its effect and violence. Here also emphasized on the reaction of domestic peoples as consequence of migrant's activities. Moreover, western government strategies are also emphasized to mitigate problems as research question.

But this paper should emphasize on exact hypothesis, theories and structure. Additionally, here it is needed to mention specific countries in western society where the problem exists as all countries might not have the same problem. Overall I think it will be a nice paper, if it works properly.
