Power Corrupts. PowerPoint Corrupts Absolutely.

By Edward Tufte

Liang

Imagine a widely used and expensive prescription drug that promised to make us beautiful but didn't. Instead the drug had frequent, serious side effects: It induced stupidity, turned everyone into bores, wasted time, and degraded the quality and credibility of communication. These side effects would rightly lead to a worldwide product recall.

Yet slideware -computer programs for presentations -is everywhere: in corporate America, in government bureaucracies, even in our schools. Several hundred million copies of Microsoft PowerPoint are churning out trillions of slides each year. Slideware may help speakers outline their talks, but convenience for the speaker can be punishing to both content and audience. The standard PowerPoint presentation elevates

format over content, betraying an attitude of commercialism that turns everything into a sales pitch.

Of course, data-driven meetings are nothing new. Years before today's slideware, presentations at companies such as IBM and in the military used bullet lists shown by overhead projectors. But the format has become ubiquitous under PowerPoint, which was created in 1984 and later acquired by Microsoft. PowerPoint's pushy style seeks to set up a speaker's dominance over the audience. The speaker, after all, is making power points with bullets to followers. Could any metaphor be worse? Voicemail menu systems? Billboards? Television? Stalin?

AP/Wide World Photos Tufte satirizes the totalitarian impact of presentation slideware.

Particularly disturbing is the adoption of the PowerPoint cognitive style in our schools. Rather than learning to write a report using sentences, children are being taught how to formulate client pitches and infomercials. Elementary school PowerPoint exercises (as seen in teacher guides and in student work posted on the Internet) typically consist of 10 to 20 words and a piece of clip art on each slide in a presentation of three to six slides -a total of perhaps 80 words (15 seconds of silent reading) for a week of work. Students would be better off if the schools simply closed down on those days and everyone went to the Exploratorium or wrote an illustrated essay explaining

something.

In a business setting, a PowerPoint slide typically shows 40 words, which is about eight seconds' worth of silent reading material. With so little information per slide, many, many slides are needed. Audiences consequently endure a relentless sequentiality, one damn slide after another. When information is stacked in time, it is difficult to understand context and evaluate relationships. Visual reasoning usually works more effectively when relevant information is shown side by side. Often, the more intense the detail, the greater the clarity and understanding. This is especially so for statistical data, where the fundamental analytical act is to make comparisons.

Estimates of relative rates, by cancer site

1 SURVIVAL RATES AND STANDARD ERRORS

	5 year	10 year	15 year	20 year
Bladder	26.8 0.4	15.2 0.9	97.1 1.7	61.3 1.0
Colon	96.0 0.0	95.8 0.0	94.0 1.0	95.4 0.1
Cervix	94.7 1.1	94.0 1.3	91.1 1.8	89.2 2.3
Endometrium	89.0 0.0	85.7 0.1	89.7 1.5	83.8 0.9
Esophagus	96.4 0.4	79.3 0.6	71.3 0.7	65.0 0.0
Esophagus adenocarcinoma	45.1 1.7	79.8 2.0	79.8 2.0	43.2 0.0
Esophagus squamous cell carcinoma	84.3 1.0	69.2 1.7	60.8 1.7	79.2 1.0
Gastric adenocarcinoma	82.1 1.0	76.2 1.1	70.9 1.9	47.9 0.4
Stomach, noncardia	70.5 1.6	66.1 1.0	62.9 2.1	60.6 0.4

Graphics Press A traditional table: rich, informative, clear.

BAD

Graphics Press PowerPoint chartjunk: smarmy, chaotic, incoherent.

Presentations largely stand or fall on the quality, relevance, and integrity of the content. If your numbers are boring, then you've got the wrong numbers. If your words or images are not on point, making them dance in color won't make them relevant. Audience boredom is usually a content failure, not a decoration failure.

At a minimum, a presentation format should do no harm. Yet the PowerPoint style routinely disrupts, dominates, and trivializes content. Thus PowerPoint presentations too often resemble a school play - very loud, very slow, and very simple.

The practical conclusions are clear. PowerPoint is a competent slide manager and projector. But rather than supplementing a presentation, it has become a substitute for it. Such misuse ignores the most important rule of speaking: Respect your audience.

Edward R. Tufte is professor emeritus of political science, computer science and statistics, and graphic design at Yale. His new monograph, *The Cognitive Style of PowerPoint*, is available from Graphics Press (www.edwardtufte.com).
