

Patrik Rudolf, Petra Hubatková

R101: Praktický úvod pro používání statistického programu R

simr

power analýzy pro MLM (v rámci lme4) za užití simulace dat

Green, P., MacLeod, C., & Alday, P. (2019). *Package ‘simr’*: Power analysis for generalised linear mixed models by simulation. R package verze 1.0.5. Dostupné z: <https://cran.r-project.org/web/packages/simr/simr.pdf>

Power analysis for mixed effects models in R

`pamm, clusterPower,
longpower, nlmeU,
simr`

Calculates power using simulation

YES

`pamm,
clusterPower,
simr`

NO

`longpower,
nlmeU`

Handles non-normal response variables

YES

`clusterPower,
simr`

NO

`pamm`

Accommodates a range of model specifications

YES

`simr`

NO

`clusterPower`

Přehled funkcí

makeGlmer a makeLmer

modify (+ extend)

powerSim

powerCurve

doSim

+ další

makeGlmer a makeLmer

makeGlmer(formula, family, fixef, VarCorr, data)

makeLmer(formula, fixef, VarCorr, sigma, data)

formula jako u lmer() nebo glmer()

fixef jako vektor

rozptyl a kovariance random efektů; pokud více -> parametry jako list

sigma – reziduální SD

modify a extend

`fixef(object_model)[“x”] <- value`

`extend(object, along, within, n, values)`

powerSim

odhad založen na Monte Carlo simulaci
(defaultní počet simulací 1000)

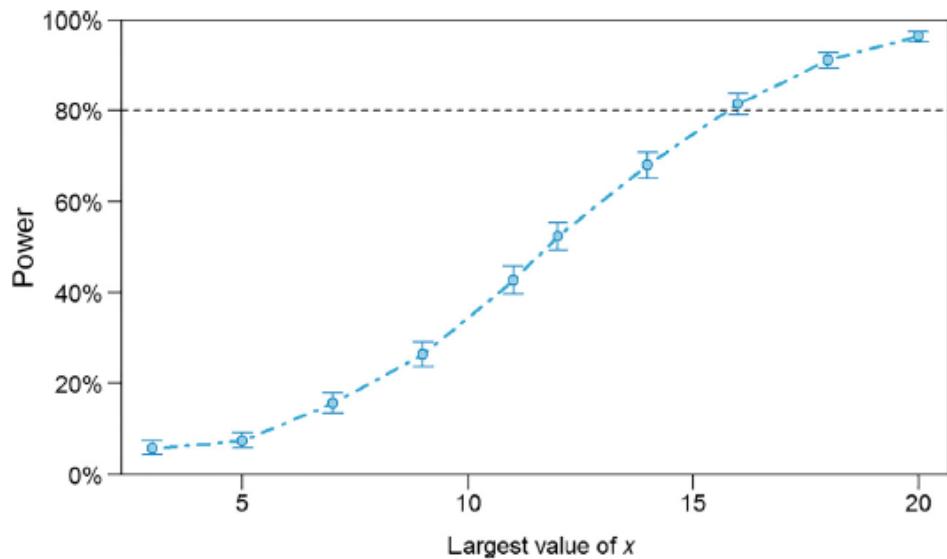

`powerSim(object_model, nsim)`

% v kolika případech vyšla simulace jako
signifikantní (nulová hypotéza byla
zamítnuta) při dané velikosti účinku

```
powerSim(model1)
## Power for predictor 'x', (95% confidence interval):
## 33.40% (30.48, 36.42)
##
## Test: z-test
##      Effect size for x is -0.05
##
## Based on 1000 simulations, (5 warnings, 0 errors)1
## alpha = 0.05, nrow = 30
##
## Time elapsed: 0 h 3 m 6 s2
```

powerCurve

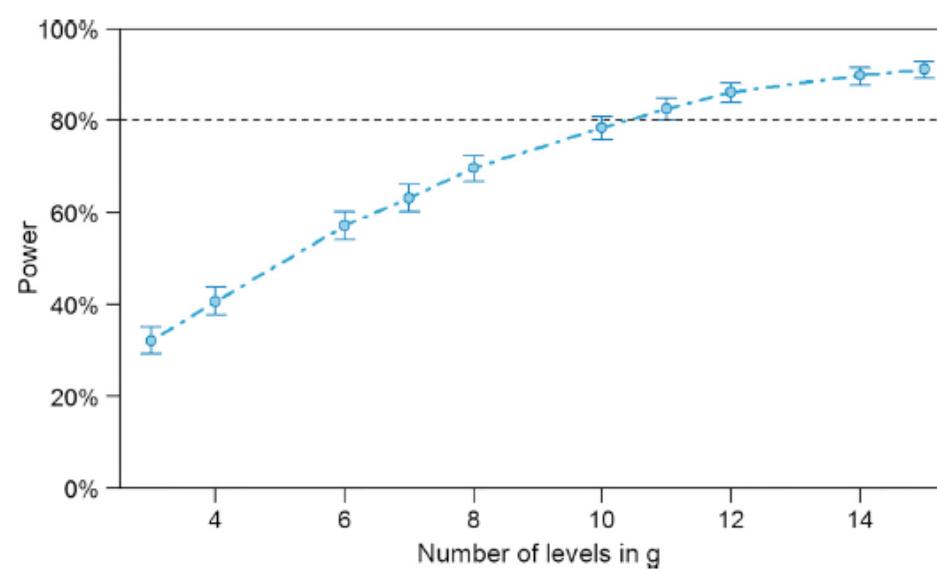

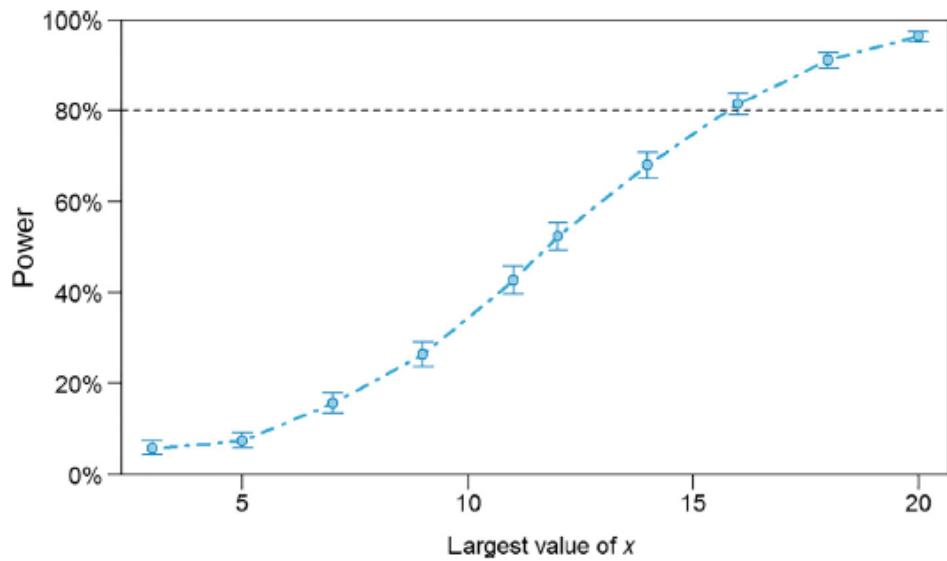

powerCurve(object_model)

```
## Power for predictor 'x' , (95% confidence interval),  
## by largest value of x:  
##   3: 5.70% ( 4.35, 7.32) - 9 rows  
##   5: 7.40% ( 5.85, 9.20) - 15 rows  
##   7: 15.60% (13.40, 18.00) - 21 rows  
##   9: 26.30% (23.59, 29.15) - 27 rows  
##  11: 42.70% (39.61, 45.83) - 33 rows  
##  12: 52.30% (49.15, 55.44) - 36 rows  
##  14: 68.00% (65.01, 70.88) - 42 rows  
##  16: 81.60% (79.06, 83.96) - 48 rows  
##  18: 91.30% (89.38, 92.97) - 54 rows  
##  20: 96.60% (95.28, 97.63) - 60 rows
```

powerCurve

`powerCurve(object_model, along = „y“)`
