# Regional Security

- Region is the area of interest to many fields of science.
- Definition and characteristics of RS:
  - a) "System of mutual relations between countries in the region against the threats of instability, crises, armed conflicts and regional wars" (*Kusztal A., 2017 - Theoretical foundations of regional security in international relations*).
  - b) Most frequently, security at the regional level is built based upon a system or an alliance operating within the defined region, and "regional security institutions are often, but not always, established on the basis of geographical boundaries of the region, at the interface of functional cooperation.
- Criteria of regional security according to Kusztal:
  - the military potential of states of a region and its technical and technological levels;
  - the condition, strategy and the size of armed forces of countries in a region;
  - the quality of management of a defense sector in states of a region;
  - the character of borders between countries of a region and of external ones (geographical and political );
  - political and military alliances of regional range;
  - the role of political elites and rationality in choosing allies within - and beyond a region

# Security architecture and relations among states

- *„An institutional system of organizing relations between states guaranteeing their security. It is based on the assumption that issues and problems related to the security of states cannot be solved individually.“*
- **Cooperative security** - ongoing effort to reduce the risk of war that does not target a specific state or coalition of states
- **Collective security** - states avoid the use of force in mutual relations (two principles - the obligation to resolve all disputes by peaceful means, the prohibition of the use of force in mutual relations)
- **Collective defense** - system of joint defense against external threats, i.e. against attacks by states that are not members of the organization

# Evolution of security studies towards regional security - Critical Security Studies

- Shift in the 90s (The first impulse - Toronto school - Strategies in Conflict: Critical Approaches to Security Studies)
- **Traditional security studies** focused on military and state as a referent object
- A shift in the definition of the referent object and threats
- According to Waisova, there are two main characteristics of CSS:
  - a) *Exploring the differences between the Euro-Atlantic approach and that of Third World authors*
  - b) *The concept of the individuals as a separate referent object*
- Mohammed Ayooob – subaltern realism
- Discussion of the concept of security in the 90s - three groups
  - A) group against changing the agenda (John Mearsheimer, Stephen Walt)
  - B) group supporting the partial change (Schultz, Buzan?, Greenwood)
  - C) group supporting radical reform (Ulman, Kegley, Kolodziej)

# Evolution of security studies towards regional security – Toronto School

- 1994 - small conference at the York University entitled Strategies in Conflict: Critical Approaches to Security Studies
- Keith Krause and Michael C. Williams - Critical Security Studies: Concepts and Cases
- They began to questioning the concept of state as the main referent object – who or what is to be secured?
- Set out agenda of CSS in three points:
  - a) referent object
  - b) security more than just a military security
  - c) changed the way how security was studied

# Evolution of security studies towards regional security – Copenhagen School

- 1995 - Barry Buzan, Ole Weaver and Jaap de Wilde published book: Security: A New Framework for Analysis
- Old vs. new concept of security
- Resolves its incoherence by arguing that the social production of security is sufficiently stable to be treated objectively
- Concept of sectoral security - military, political, economic, societal, environmental security
- Concept of analytical levels/categories (international systems, international subsystems, units, subunits and individuals).
- Concept of regional security complexes (4 basic principles)
- Concept of Securitization

# Theory of Regional Security

## ■ Complexes

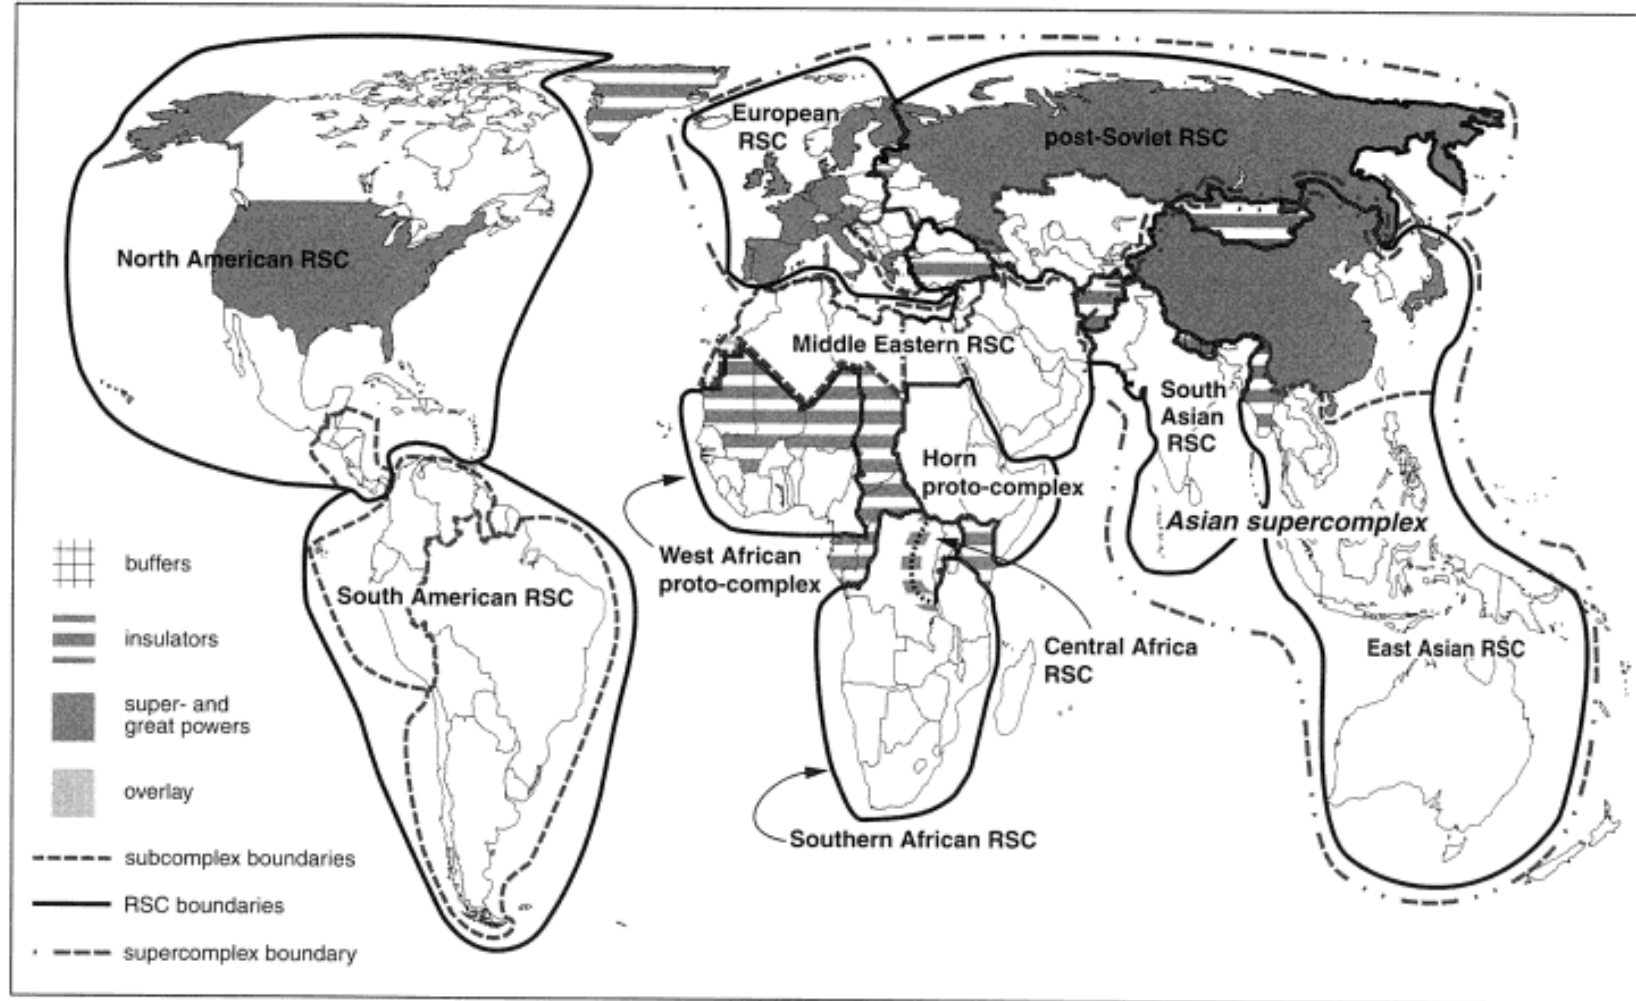

■ Concept of regional security complexes (4 basic principles):

- Composed of two or more states
- Geographically coherent grouping
- Mutual security dependency relationship (MSDR)
- MSDR deeply embedded, long term not permanent

*„a group of states whose major security perspectives and concerns are so intertwined that the national security issues of each cannot be adequately analyzed or addressed separately“*

- Lower level security complex x Higher level security complex
- Buffer zones and states „inbetween“

# Regional Security Threats

- The most prominent regional threats According to Eichler (2009):
  - a) Military threats - regional conflicts, WMD proliferation and armed aggression
  - b) Political threats - terrorism and organized crime, existence of dangerous dictatorial regimes, human rights violations and threats to internal politics by superpowers (NATO, USA, etc.).
  - c) Economic threats - instability of world markets, uneven economic development and economic crisis.
  - d) Ecological threats - changes in land and sea use; direct exploitation of natural resources; climate change; pollution and invasive species.

# Regional Security Threats - WMD

- NPT 1968 - the NPT non-nuclear-weapon states agree never to acquire nuclear weapons and the NPT nuclear-weapon states in exchange agree to share the benefits of peaceful nuclear technology and to pursue nuclear disarmament aimed at the ultimate elimination of their nuclear arsenals.

## 2023 ESTIMATED GLOBAL NUCLEAR WARHEAD INVENTORIES

The world's nuclear-armed states possess a combined total of over 12,500 nuclear warheads; nearly 90% belong to Russia and the United States. Approximately 9,600 warheads are in military service, with the rest awaiting dismantlement.

# Regional Security Threats - Conflicts

- **An armed conflict** is a contested incompatibility that concerns government or territory where the use of armed force between two parties, results in at least 25 battle-related deaths in one calendar year.
- **Conflict:** clash between two actors who have incompatible interests.
- Necessary features of conflict according to Holsti (1991):
  - a) Actors of the conflict
  - b) Area of the clash (incompatibility)
  - c) Tension
  - d) Conflict behavior
- Conflict vs. War vs. Civil war
