

This is the most spreaded term for the disease.

We simply need to make the test right now! *To take a test/to do a test*

This instrument is made from metal.

There is a range of allergies on the colour.

I don't know how to call it.

No-one know what is the cause of the disease.

Isaac Newton was a famous physician/physicist (in the sense of "fyzik") who described and formulated the laws governing gravity.

I think all of you knot what is instability.

Does somebody know what it is?

He was the first British doctor which described it.

This was the most discussioned case. (discussed, debated)

I will explain you what it is about.

It was the first man which was diagnosed for this disease.

Well, there are three steps you should do.

As you can see, there are many different stimuluses and bacteriums.

These patients are used to do everything on their own.

On this picture you can see the cell multiplication.

In such a way the cells are slowly modified and attack the tumour.

The nurse than takes care about the patient instead of the relatives.

And now I would like to say you something ...

You can become a part of the rescue team if you will decide to study the emergency care.

Have you heard or read any informations on the this issue?

The story about the development of this procedure is very long as you can know /as you can have heard ...
