

Examples of questions: :

1. Index PBI
 - a) is a papilla bleeding index
 - b) is an index that shows the treatment needs in periodontology
 - c) is important for motivation of patients

2. If the finding of investigation is CPITN 4
 - a) dental calculus was found
 - b) periodontal pocket deeper than 5 mm was found
 - c) bleeding of gingiva was found only

3. Interdental brushes
 - a) should be used daily
 - b) must have the proper size
 - c) are useful for the root canal cleaning

4. Describe the WHO periodontal probe

5. Class I. acc to Angle is
 - a) normoocclusion
 - b) distoocclusion
 - c) mesioocclusion

6. What is infraocclusion (orthodontics)?

7. Zincoxidphosphate cement is
 - a) mixed of powder and liquid
 - a) a temporary filling material
 - b) is light curing one component material

8. The principle of connection of amalgam to hard dental tissues is
 - a) macromechanical
 - b) micromechanical
 - c) chemical

9. Basic rules of preparation of cavities are:

9. The black coded diamond bur is

- a) standard
- b) coarse
- c) extra fine

10. The gear of the blue coded handpiece is

- a) 1:1
- b) to slow
- c) to fast

11. In which cavities the matrix band is not used?

- a) class I
- b) class II
- c) class IV

12. Describe the purpose of wooden wedges

13. Which preparation instruments are used for excavation of carious dentin?

14. Tick the correct answer

- a) the retentive border must be prepared for composites
- b) glassionomer cements release fluorid ions
- c) the thermal expansion of glassionomers is similar to dentin

15. Tick the permanent filling materials:

Zinkoxideugenol cement, glassionomer cement, amalgam, zinkoxidphosphate cement, gypsum

16. Calcium hydroxide

- a) can improve the healing potential of dental pulp
- b) can be used as a protection of dental pulp against chemical irritation
- c) can be used as a temporary root canal filling
- d) its pH is around 12,5

17. The symbol of the K - file is

- a) triangle
- b) square
- c) circle

18. Describe the principle of the single cone method of the root canal filling.

19. What is a spreader?

20. Describe the consequences of early loss of deciduous molars – X pedodontics will not be included

21. The composition of composite material is:

- a) resin based on Bowen's monomer and other dimetacrylates, inorganic fillers, silan, initiator and activator, pigments.
- b) polyacrylic or polymaleic acid and aluminium silicate glass
- c) polyacid, resin and glass

22. The tangent angle of the H-file is

- a) 60°
- b) 40°
- c) 20°

23. Conditioner

- a) create the retentive pattern in enamel
- b) is usually based polyacrylic acid
- c) no answer is correct

24. What is an inlay?

25. Apical constriction is

- a) aperture of the root canal on apex of the root
- b) the most narrow point of the root canal
- c) the beginning of the root canal at the bottom of the pulp chamber
