

# Basic Medical Terminology II

SEMINAR 3

# Revision

- How do we form comparatives and superlatives of Latin adjectives? How do we decline them?
- What are the differences in declension between *brevis*, *e* and *brevior*, *ius*?
- Give an example of irregular and incomplete comparison.
- Form diminutives of the following nouns: *canalis*, *vena*, *lobus*, *dens*. How do we call this word-formation process? Explain its principle.

## 1. SUPERIOR OR SUPERIUS?

## MAIOR OR MAIUS?

## ANTERIOR OR ANTERIUS?

# GIVE NAMES OF THE MUSCLES

# EXPRESSING POSITION

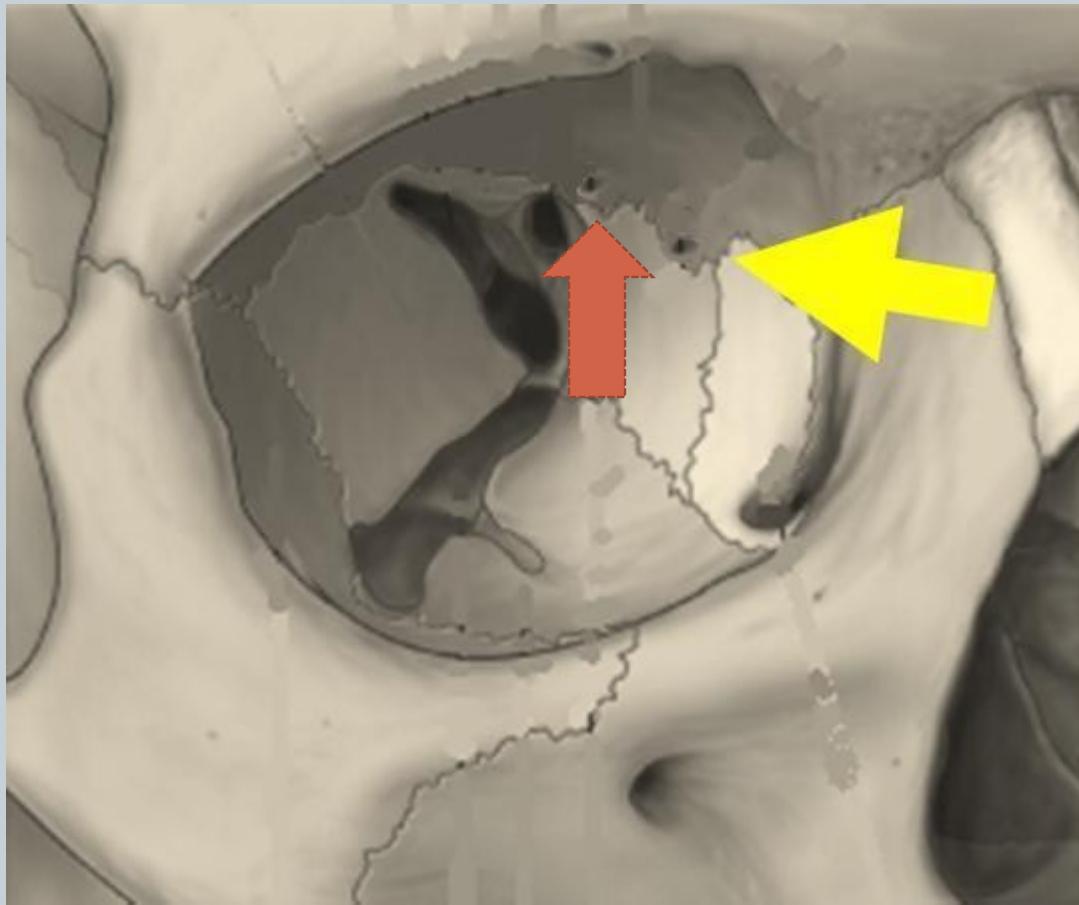

- A) PREPOSITIONS**
- B) COMPARATIVE FORMS**
- C) ADJECTIVES**
- D) COMPOUNDS**
- E) PREFIXES**

# A) PREPOSITIONS

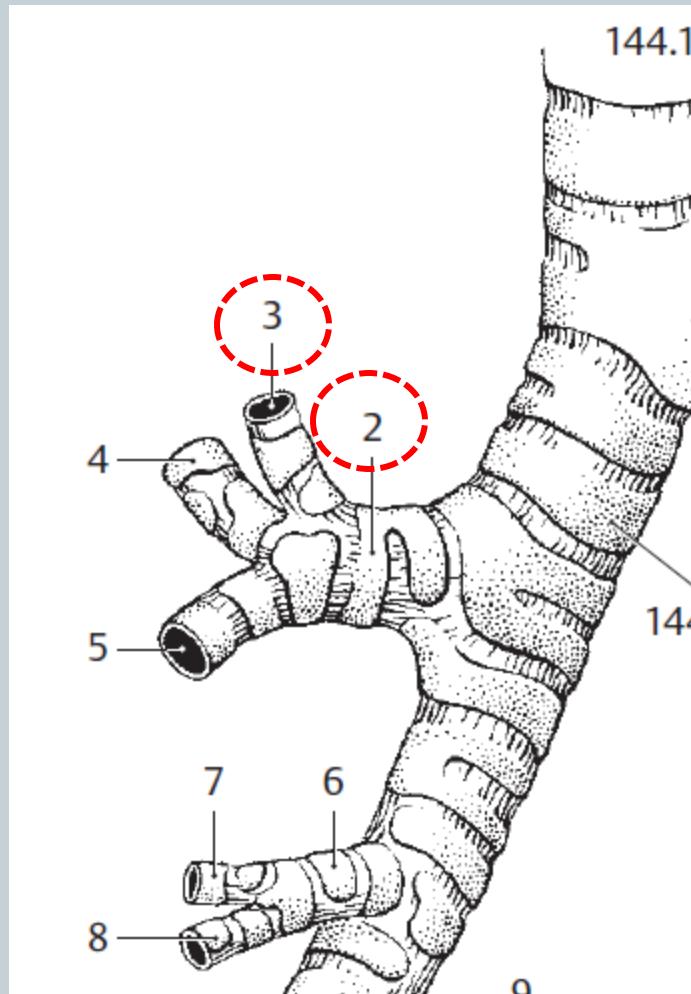

- WITH ACCUSATIVE
  - funiculus umbilicalis **circum** collum fetus
  - tumor **ad** hepar increscens
  
- WITH ABLATIVE
  - corpus alienum **in** aure interna
  - vulnus morsum **sub** genu l. dx.

## B) COMPARATIVE FORMS

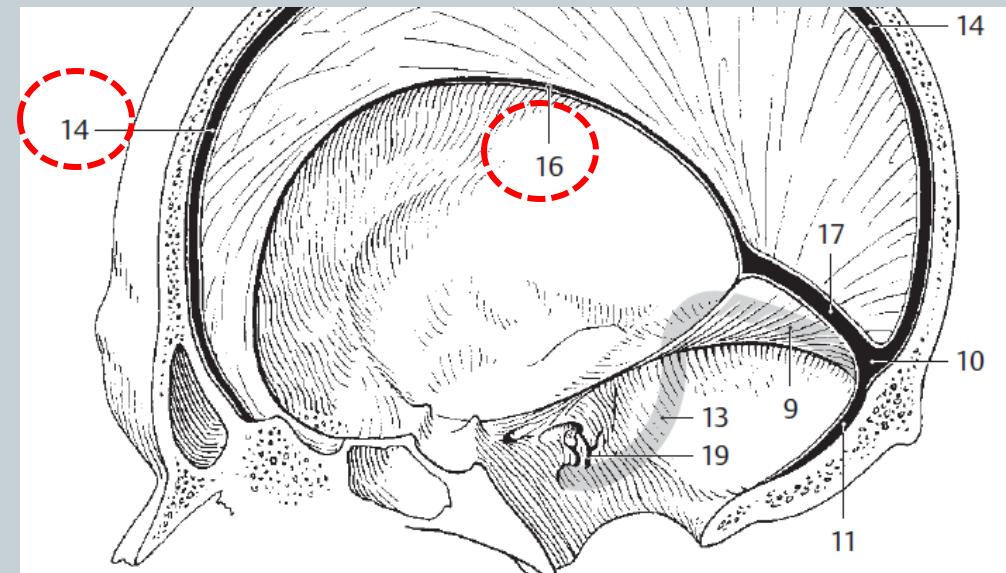

foramen ethmoidale  
anterius / posterius

# C) ADJECTIVES

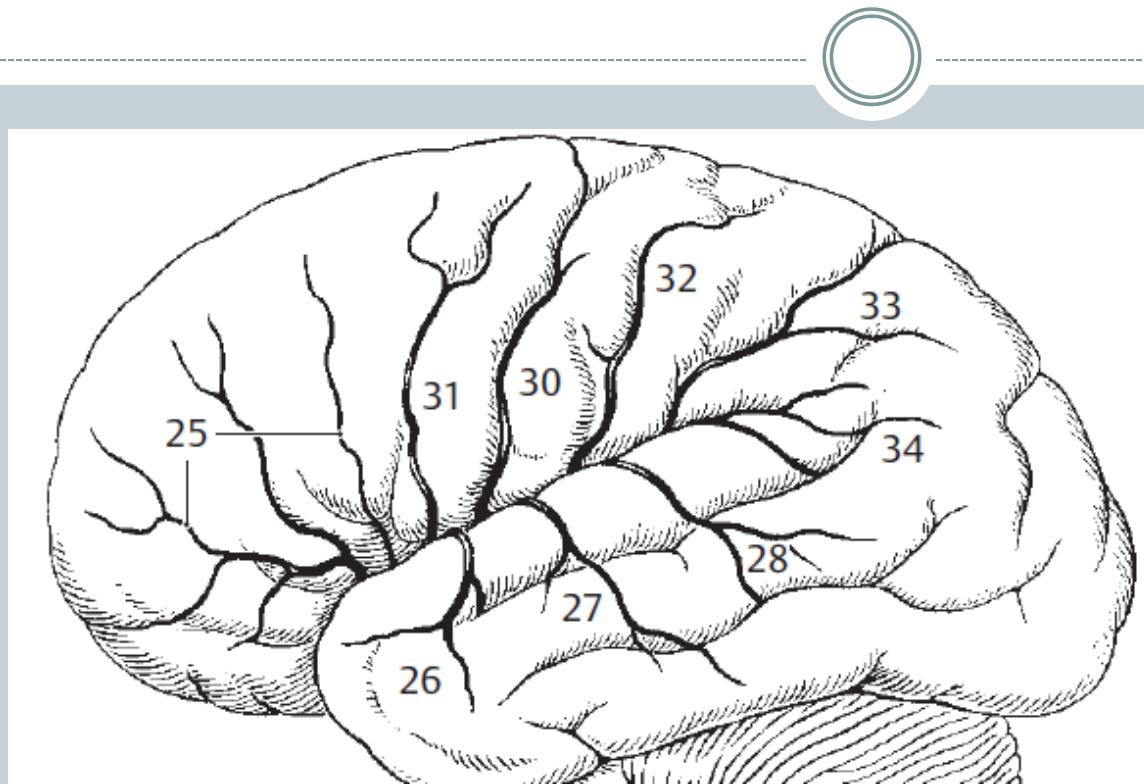

bronchus segmentalis **apicalis** (3)  
bronchus **lobaris** superior dexter (2)

sinus **sagittalis** superior / inferior

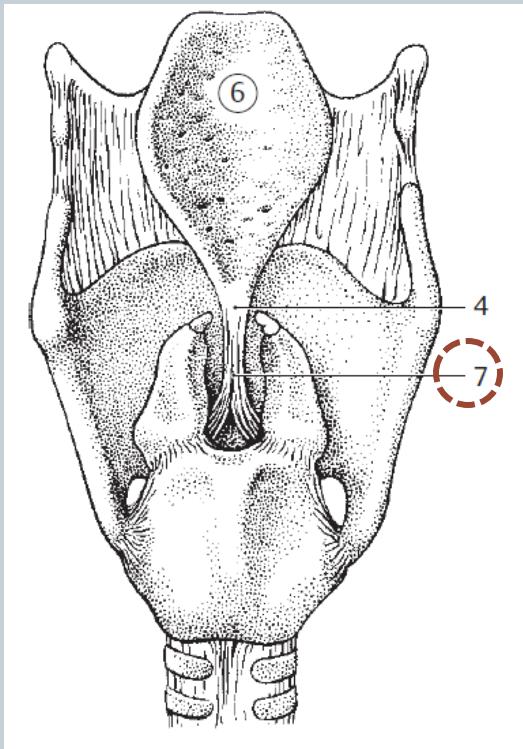

## C) ADJECTIVES

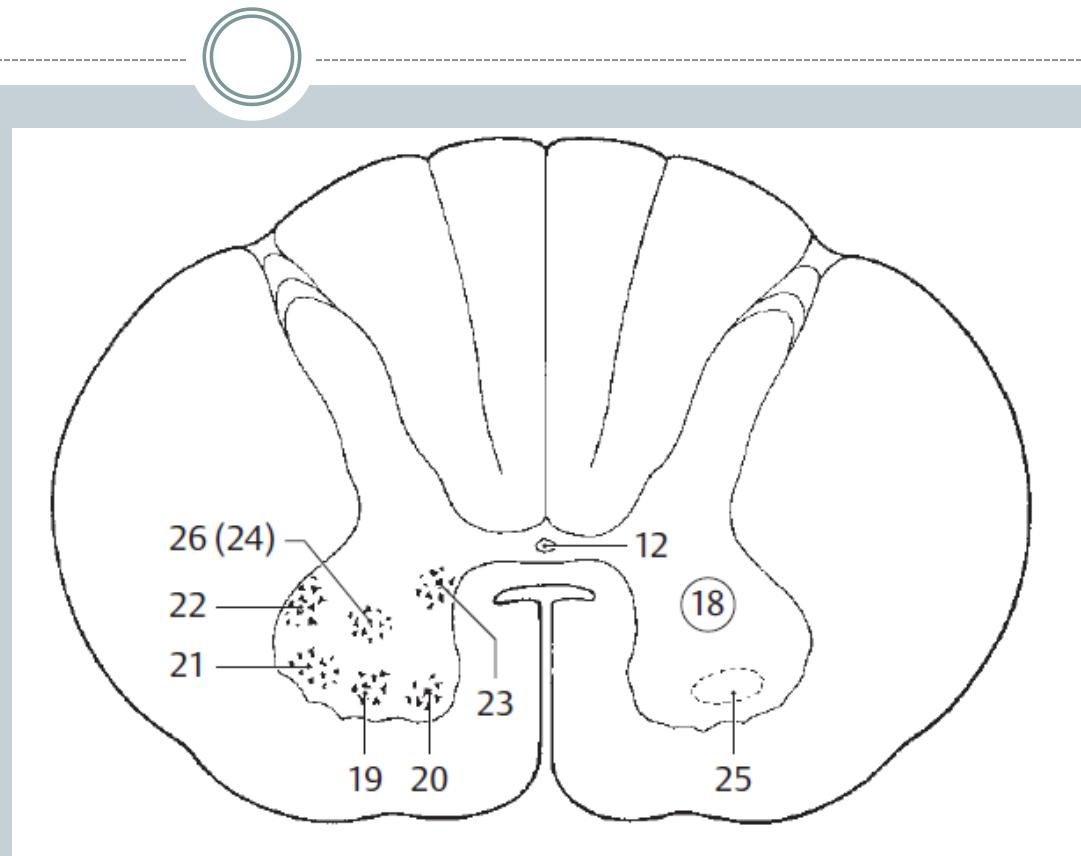

- 25 a. **frontobasalis lateralis**
- 26 a. **temporalis anterior**
- 27 a. **temporalis media**
- 28 a. **temporalis posterior**

- 30 a. **sulci centralis (gen.)**
- 31 a. **sulci precentralis (gen.)**
- 32 a. **sulci postcentralis (gen.)**
- 33 aa. **parietales anterior et posterior**

## D) COMPOUNDS

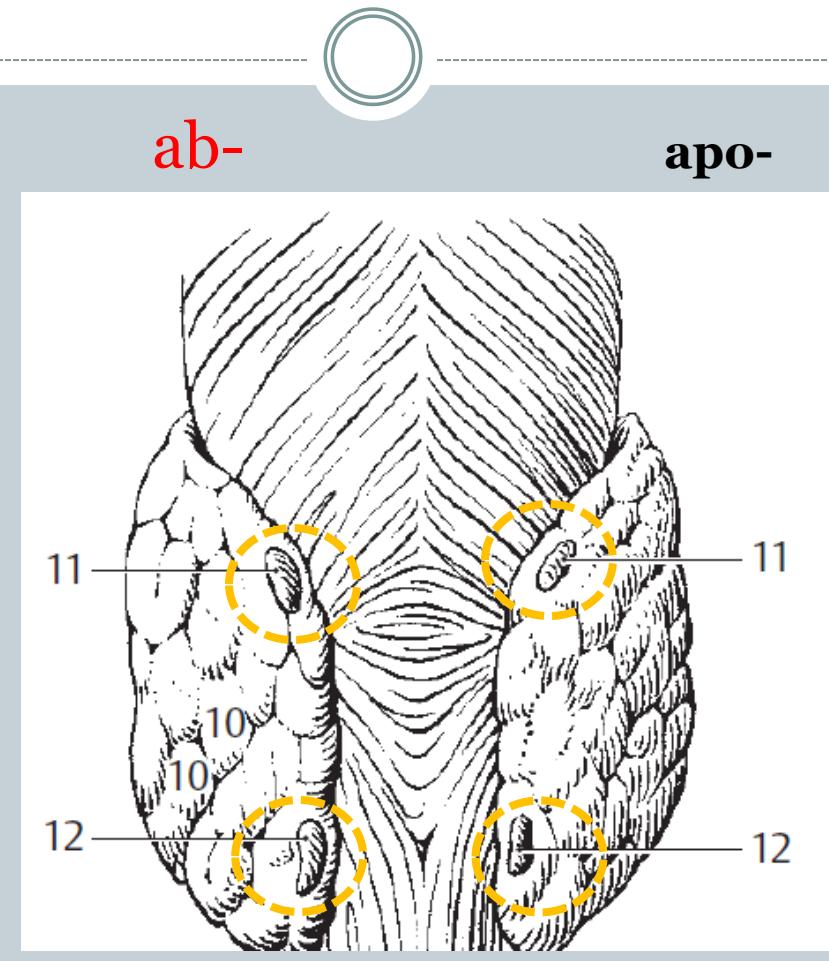

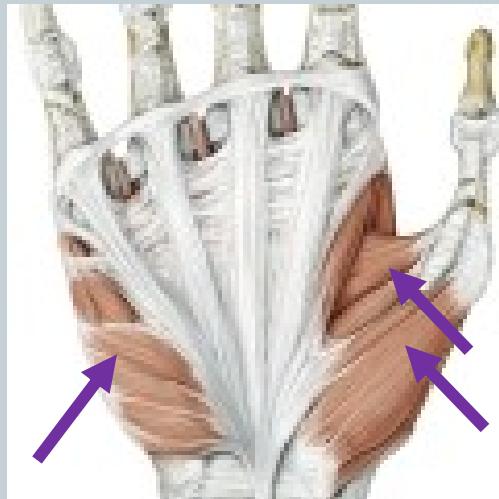

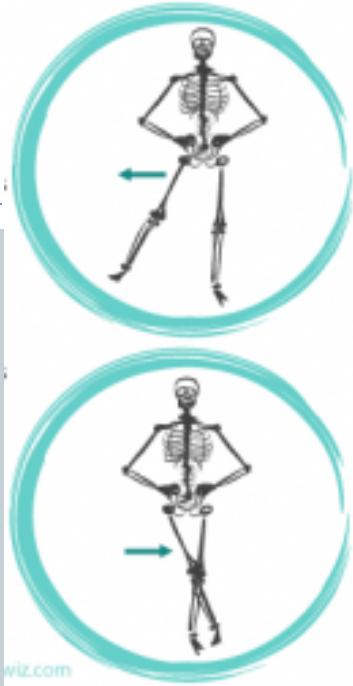

lig. thyroepiglotticum

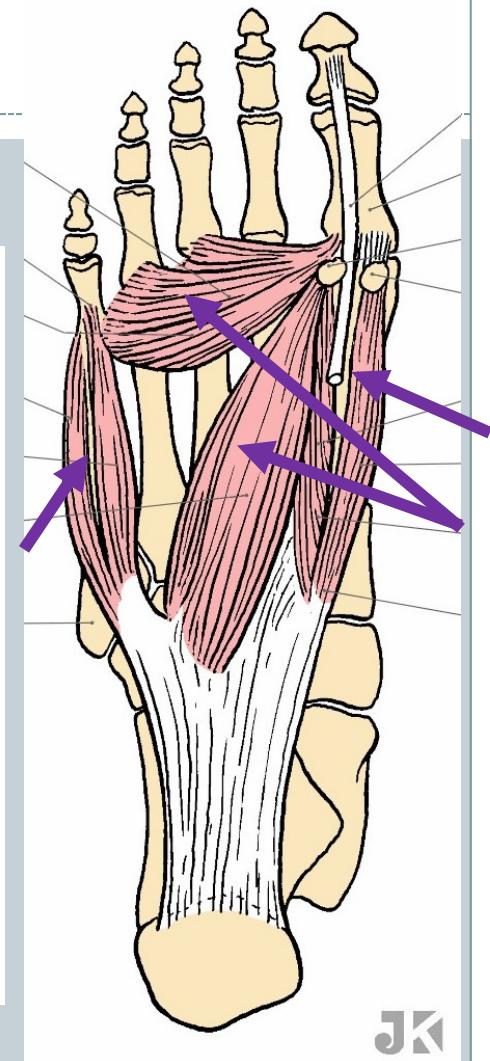

nucleus <i>anterolateralis</i>	19
n. <i>anteromedialis</i>	20
n. <i>posteroventralis</i>	21
n. <i>retroposterolateralis</i>	22
n. <i>posteroventralis</i>	23

## E) PREFIXES

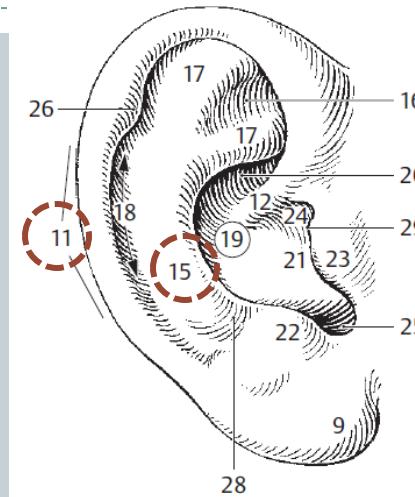

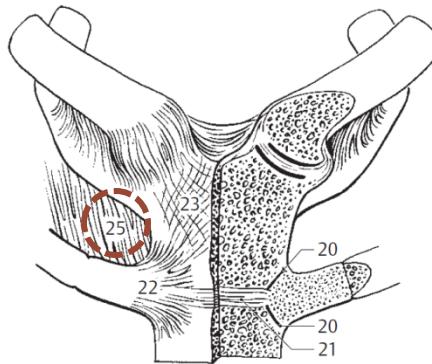

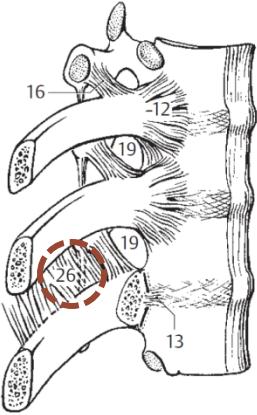

ad-

par(a)-

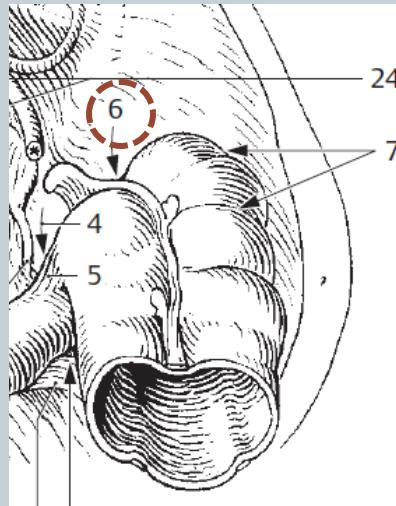

# E) PREFIXES

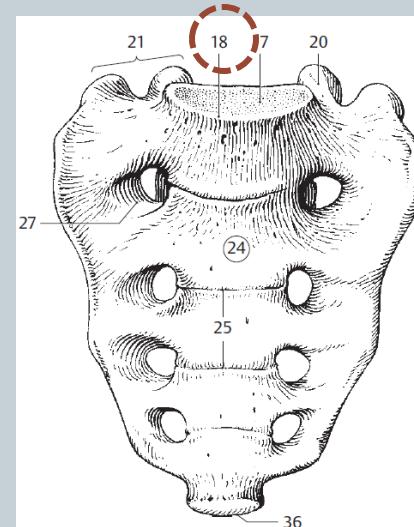

helix /  
ant(i)helix

membrana **inter**costalis *externa* / *externa*

recessus  
**retro**caecalis

**promontorium**  
ossis sacri

# Guess the meaning of the prefixes and analyze the terms

## (Handout 3.2, task 4)

INJECTIO

intravenosa

intraarterialis

intramuscularis

subcutanea

ABSCESSUS

GLANDULA

intracranialis

retrocaecalis

extraduralis

epiduralis

perirenalis

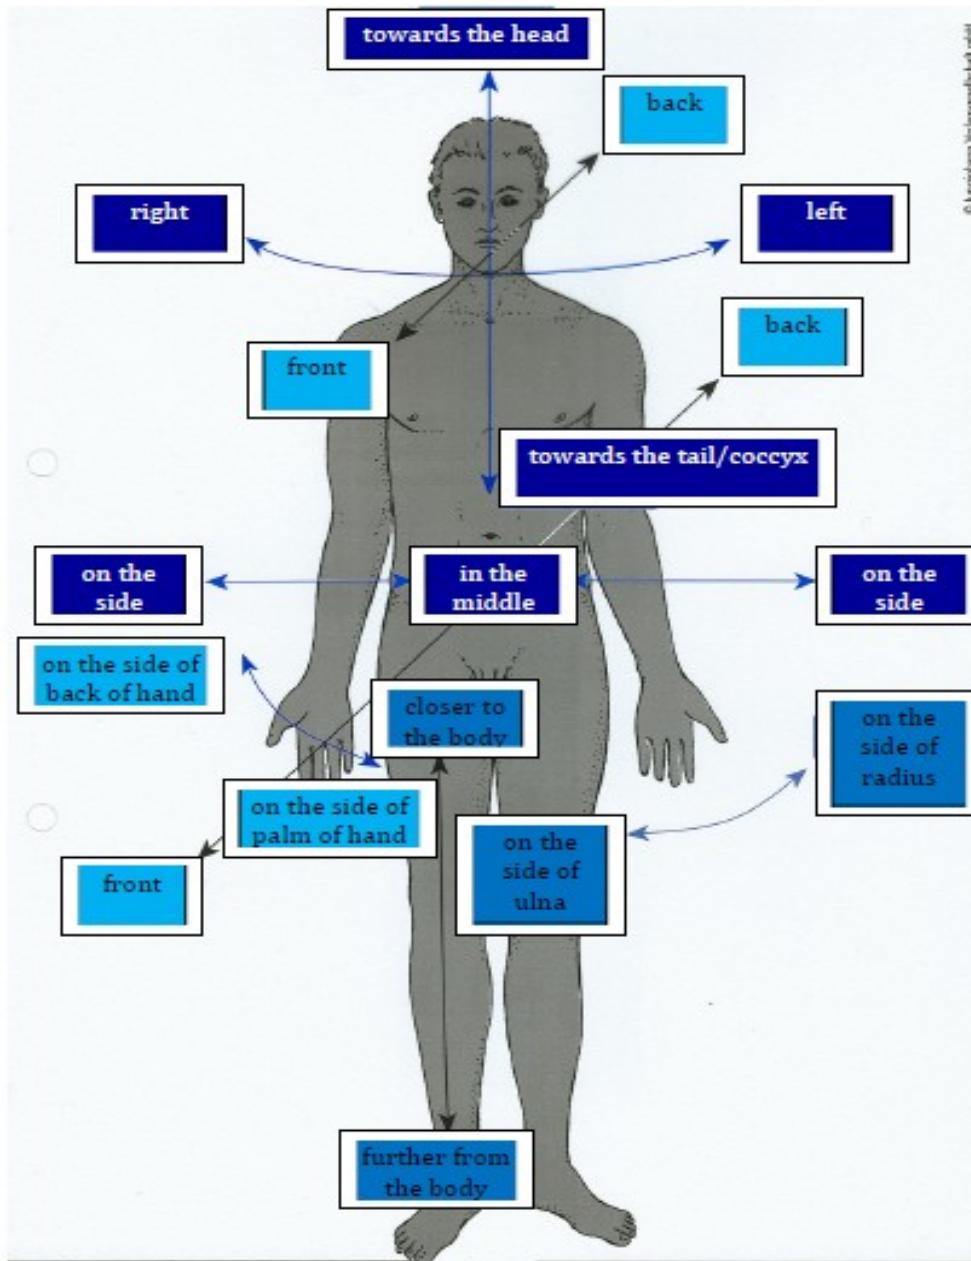

sublingualis

submandibularis

hypogastrica

parotidea

suprarenalis

# True or False? (Handout 3.2, task 3)

	YES	NO
1. In anatomical position the palmar surface is in <i>posterior</i> position.		✓
2. The sternum is <i>anterior</i> to the heart.	✓	
3. The clavicles are <i>mediales</i> to the sternum.		✓
4. The elbow is <i>proximalis</i> to the wrist.	✓	
5. The aorta is <i>ventralis</i> to the spinal column.	✓	
6. The skin is <i>profundus</i> to the muscles.		✓
7. The blood drawn from a fingertip is <i>peripheralis</i> .	✓	

# Fractures - supplement

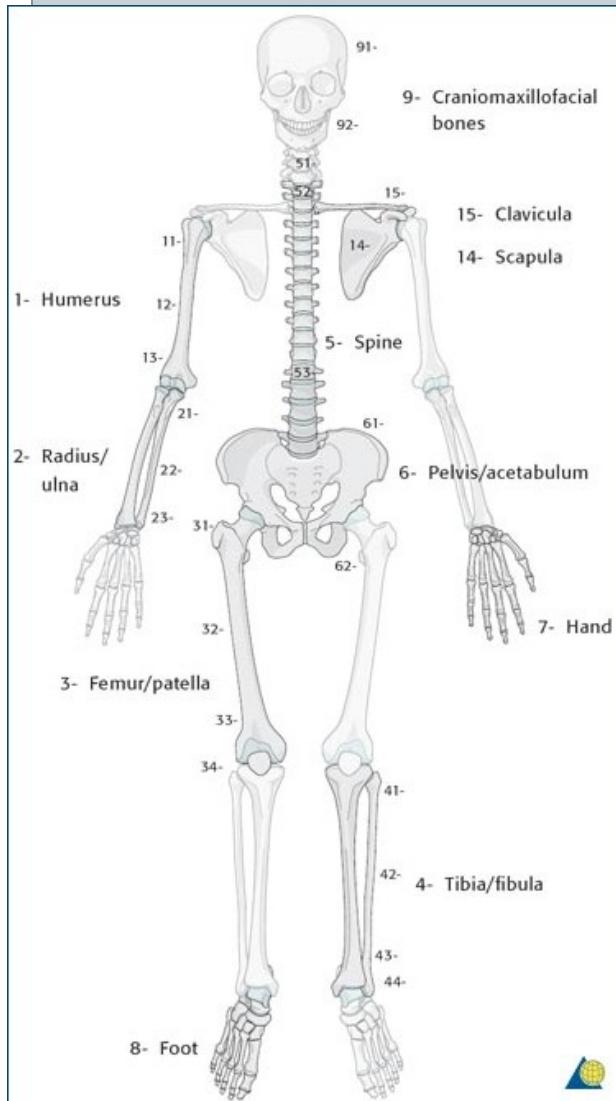

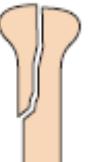

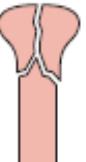

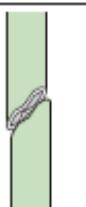

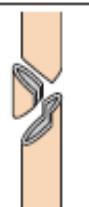

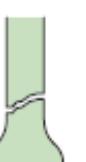

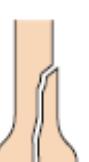

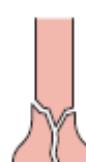

**DISLOCATED FRACTURES  
CLASSIFICATION  
FRACTURE HEALING  
TOOTH FRACTURES**

# Types of dislocated fractures

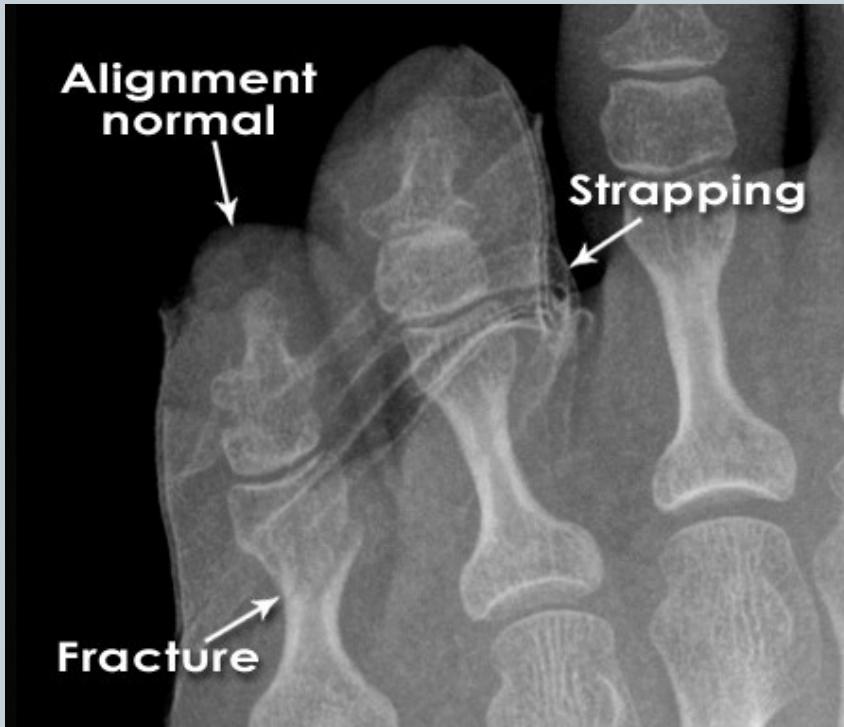

# AO Classification of fractures

	A	B	C
<b>1 Proximal</b>	 <b>Extraarticular</b> <p>No involvement of displaced fractures extending into the articular surface</p>	 <b>Partial articular</b> <p>Part of the articular component is involved, leaving the other part attached to the meta-/diaphysis</p>	 <b>Complete articular</b> <p>Articular surface involved, metaphyseal fracture completely separates articular component from the diaphysis</p>
<b>2 Diaphyseal</b>	 <b>Simple</b> <p>One fracture line, cortical contact between fragments exceeds 90% after reduction</p>	 <b>Wedge</b> <p>Three or more fragments, main fragments have contact after reduction</p>	 <b>Complex</b> <p>Three or more fragments, main fragments have no contact after reduction</p>
<b>3 Distal</b>	 <b>Extraarticular</b> <p>No involvement of displaced fractures extending into the articular surface</p>	 <b>Partial articular</b> <p>Part of the articular component is involved, leaving the other part attached to the meta-/diaphysis</p>	 <b>Complete articular</b> <p>Articular surface involved, metaphyseal fracture completely separates articular component from the diaphysis</p>

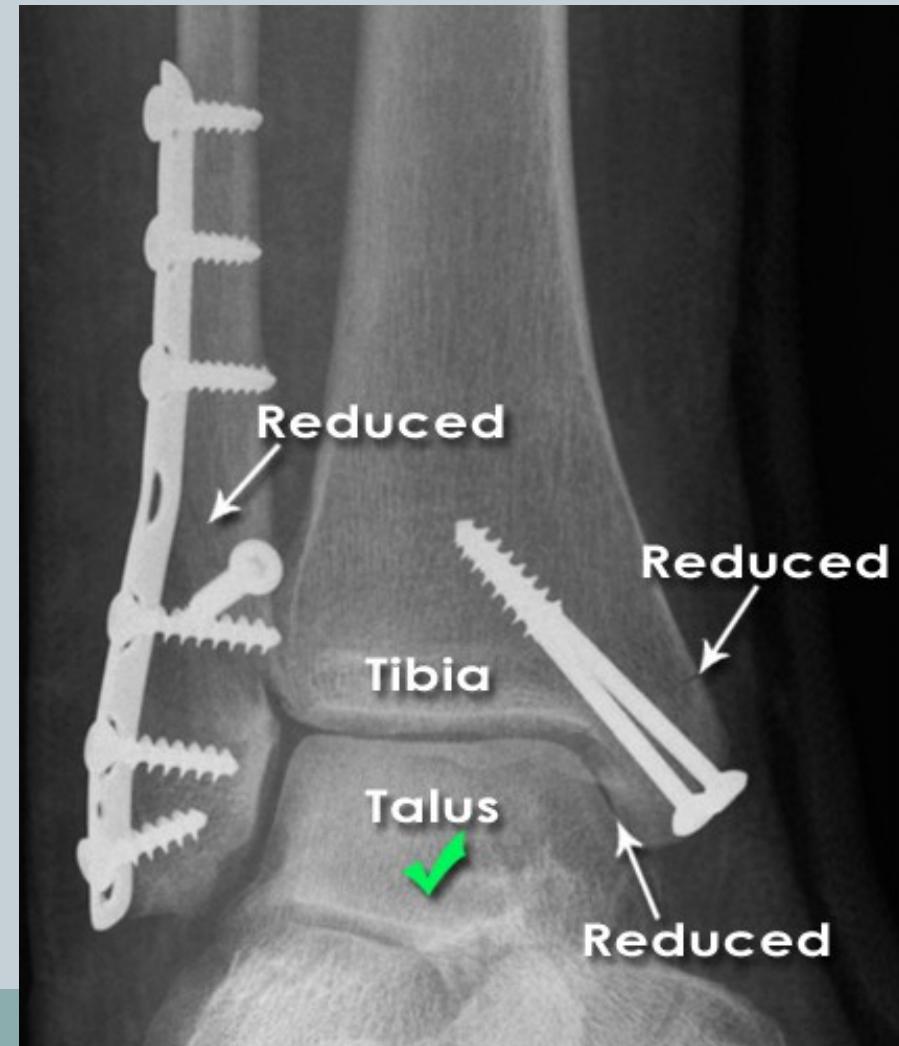

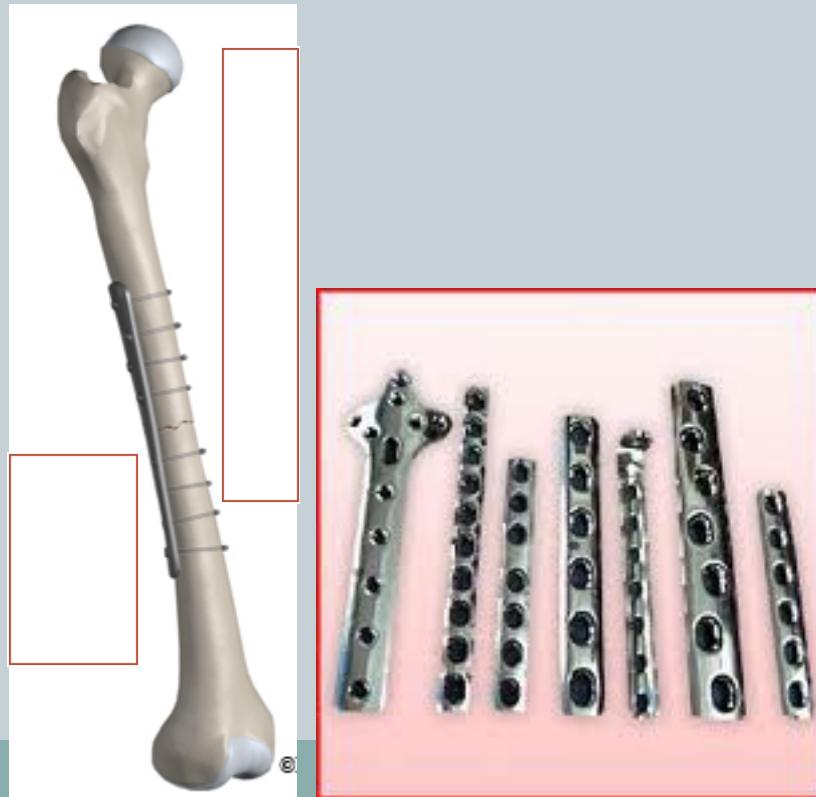

# Fracture Healing: 1: REPOSITIO = REDUCTIO fragmentorum

CLOSED (short /long term)

# Fracture Healing: 2: FIXATIO = STABILISATIO fragmentorum

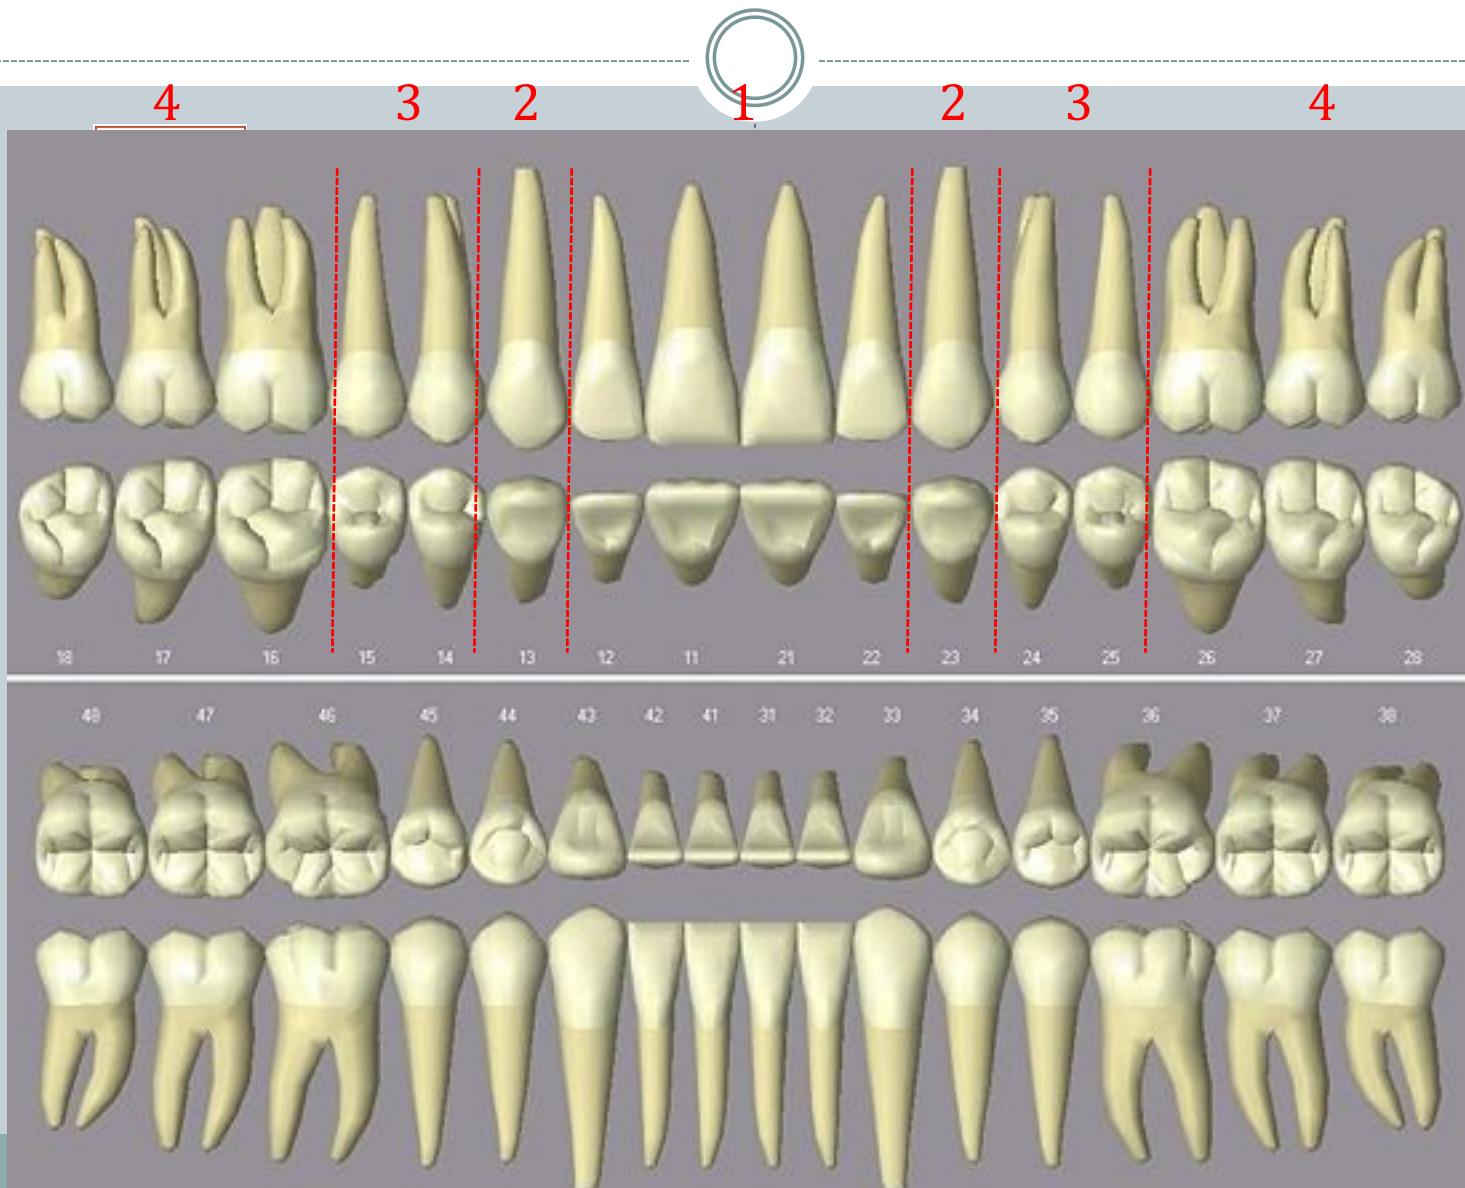

## INTERNAL FIXATION

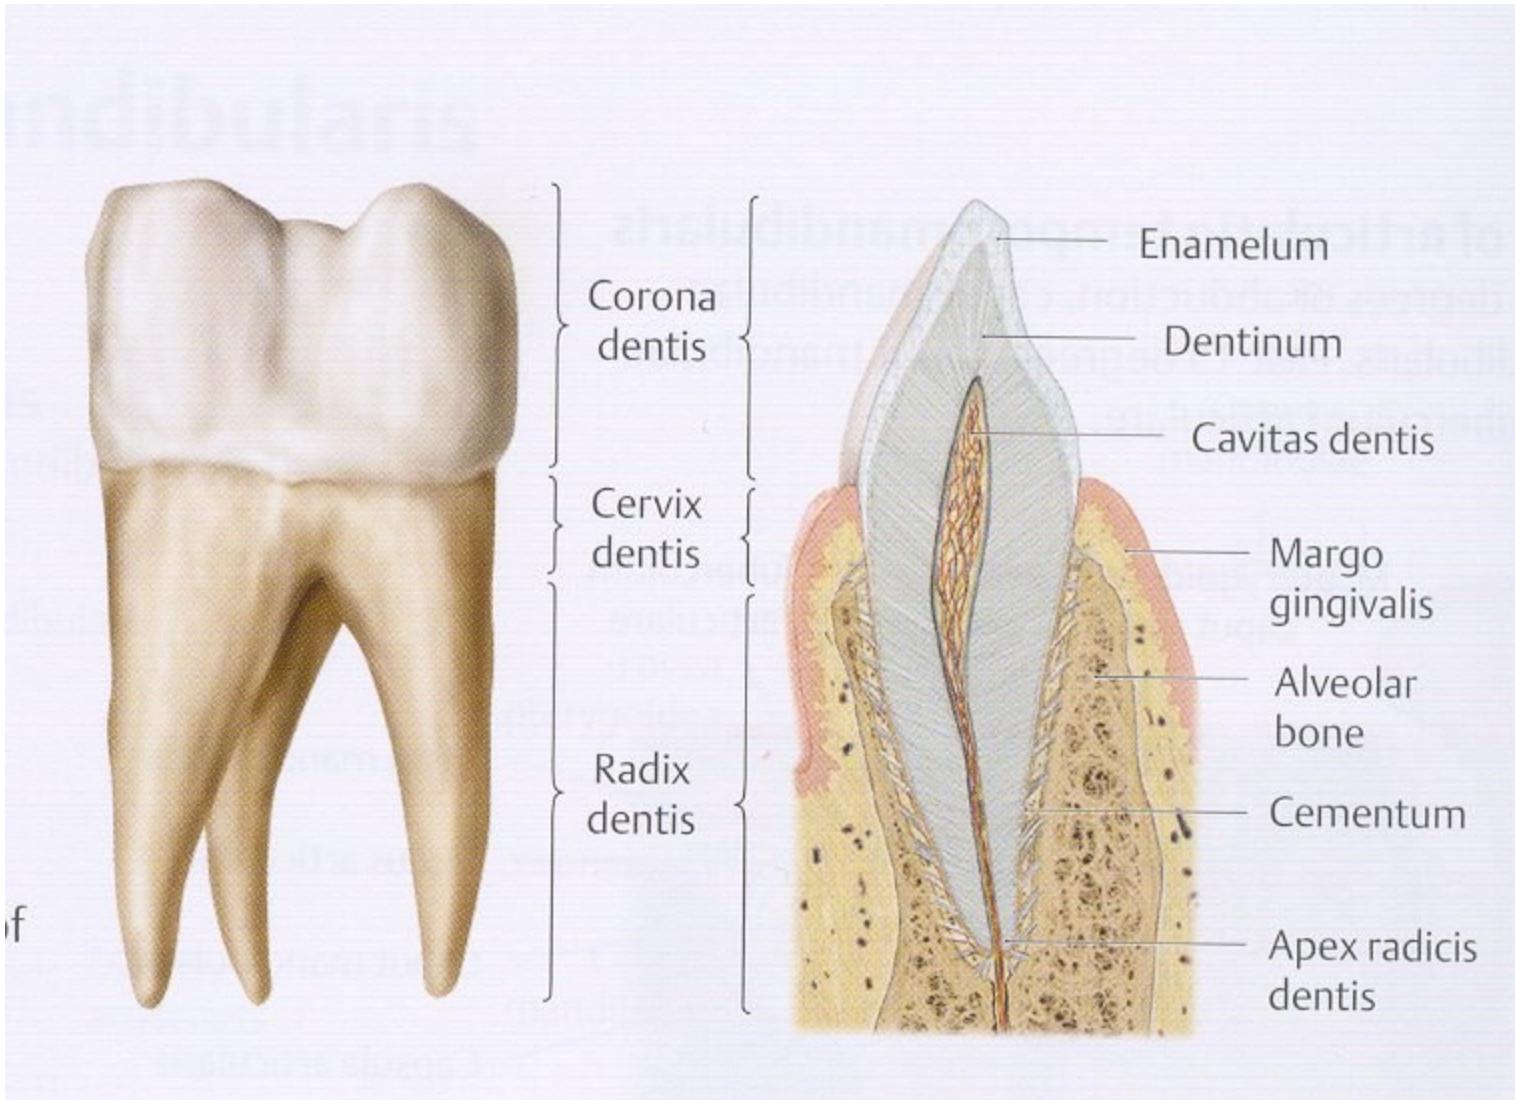

# Fracture Healing: 2: FIXATIO = STABILISATIO fragmentorum

# Name the types of permanent teeth

# Translate the given types of tooth fractures :

## ICD S 02.50-54

25

Fracture of  
tooth  
enamel

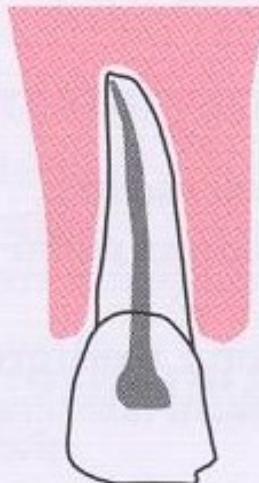

Simple  
fracture of  
the tooth  
crown not  
penetrating  
to the  
dental pulp

Complicated  
fracture of  
the tooth  
crown  
penetrating  
to the dental  
pulp

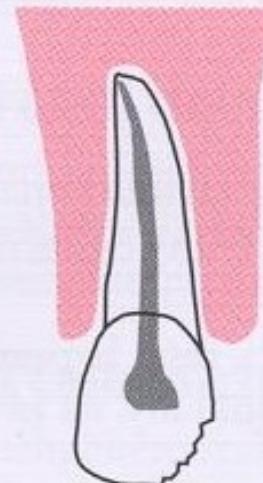

Fracture of  
the tooth  
root

Fracture of  
the tooth  
crown and  
tooth root

## Fr. aperta TSCHERNE I

- open fracture with small skin injury without its contusion
- negligible bacterial contamination

Profesor Dr. Harald **Tscherne** (1933), Traumatology Clinic, Hannover: *Classification of fractures* published in 1982, T. divides fractures into open and closed. The most important criterium for him is the degree of the soft tissue damage.

# Create a clear Latin diagnosis based on the passages in red

A 52-year-old man came to the emergency department at this hospital because of debilitating weakness in his legs and hips; he was unable to stand and had edema of the legs with extension to the waist. He reported increased irritability and bruising on his arms.

The chest CT scan obtained the next day showed a lung abscess in the left upper lobe and bilateral pleural effusions. MRI of the abdomen revealed diskitis of the second and third lumbar vertebrae and an abscess extending into the right diaphragmatic crus. MRI also revealed compression fractures of the L2 and L3 vertebral bodies with enhancement, T<sub>2</sub>-weighted hyperintensity, and very mild enhancement of the intervertebral disk, as well as an associated adjacent dorsal epidural abscess, adjacent psoas muscle abscesses bilaterally, and dorsal paraspinal muscle abscesses.

MRI of the brain performed 10 days after admission showed an ischemic lesion in the right medial temporal lobe.
