

## REVISION

- Insufficientia renalis chronica gr. IV.
- Decubitus regionis ossis sacri et calcanei l. sin. gr. II.
- St. p. amputationem pollicis et digiti III. manus l. dx. traumaticam
- Gangraena digitii IV. et V. pedis l. sin.
- St. p. fracturam vertebrae Th12 compressivam
- St. p. fracturam costae l. sin. IV., V., VI. et VII. inveteratam
- Pelvis renalis l. dx. et ureter l. dx duplex
- Tumor lobi superioris pulmonis l. sin. triplex
- Metastases hepatis multiplices susp.
- Funiculus umbilicalis circum collum fetus 1x/2x/3x in grav. hebd. 40+4

Obesitas permagna

```
graph TD; A[Obesitas permagna] --- B[ROOT]; A --- C[SUFFIX]; A --- D[PREFIX]; A --- E[ROOT]
```

The word "Obesitas permagna" is shown at the top. Below it, four lines of text point to the word: "ROOT", "SUFFIX", "PREFIX", and "ROOT".

St. p. cholecystectomiam laparoscopicam

```
graph TD; A[St. p. cholecystectomiam laparoscopicam] --- B[ROOT 1]; A --- C[ROOT 2]; A --- D[PREFIX]; A --- E[ROOT 3]; A --- F[SUFFIX]; E --- G[ROOT 1]; E --- H[ROOT]; E --- I[SUFFIX]
```

The word "cholecystectomiam laparoscopicam" is shown at the top. Below it, six lines of text point to the word: "ROOT 1", "ROOT 2", "PREFIX", "ROOT 3", "SUFFIX", and another "SUFFIX". The "PREFIX" and "SUFFIX" labels are in red, while the other labels are in green.

## WORD COMPOUNDING OVERVIEW

### Latin compounds

- ⇒ usually 2-root expressions
- ⇒ connecting vowels: o/i/Ø
- ⇒ a noun/adjective/numeral on the first place

examples:

nas-o-lacrim-alis  
secund-i-grav-ida  
uni-later-alis  
mult-angulus

cerebr-o-spin-alis (noun)  
mult-i-cellul-aris (adj.)  
prim-i-para (numeral)

### Greek compounds

- ⇒ multi-root expressions
- ⇒ connecting vowels: o/Ø
- ⇒ a noun/adjective/numeral on the first place

examples:

thromb-o-cyt-o-penia  
(3 roots)  
pan-hyster-o-salping-o-  
oophor-ec-tom-ia (5 roots)

haemat-o-log-ia  
haemat-ur-ia  
tri-pleg-ia

py-ur-ia (noun)  
macr-o-cephal-ia (adj.)  
mon-o-pleg-ia (numeral)

haematuria x uraemia

### Hybrids (Latin and Greek combined)

- ⇒ multi-root expressions

examples:  
ap-pendic-itis  
L L G

hepat-o- ren-alis  
G L L

ovari-ec-tom-ia  
L G G G

cheil-o-gnath-o-palat-o-schisis  
G G L G

## FORM LATIN COMPOUND ADJECTIVES

*Example: articulatio + (carpus+metacarpus) >  
*articulatio carpometacarpalis**

articulatio + (costa + vertebra)

costovertebralis

articulatio + (metacarpus + phalanx)

metacarpophalangea

articulatio + (sternum + costa)

sternocostalis

ganglion + (cervix + thorax)

cervicothoracicum

ganglion + (cranium + spina)

craniospinale

ganglion + (encephalon + spina)

encephalospinale

ligamentum + (carpus + metacarpus)

carpometacarpale

ligamentum + (costa + clavicula)

costoclaviculare

ligamentum + (hepar + duodenum)

hepatoduodenale

musculus + ( brachium + radius)

brachioradialis

musculus + (cranium + spina)

craniospinalis

musculus + (urethra + vagina)

urethrovaginalis

# Anatomical structures and body liquids

Greek roots

# NAME STRUCTURES ACCORDING TO DEFINITIONS, TERMS SHOULD BE COMPOUND ADJECTIVES

The structure is the connection between the *sacrum* and *coccyx*; it is frequently a true joint, but often occurs as a synchondrosis, it is: articulatio sacrococcygea

Suture lateral to the nasal bone that connects the nasal portion of the *frontal bone* and the frontal process of the *maxilla*, is: sutura frontomaxillaris

Epicanthus, is the skin fold of the upper *eyelid* covering the inner angle of the eye (i. e. on the side close to the *nose*), another Latin name for it is: plica palpebronasalis

The pleural recess between the lateral wall of thorax (i. e. *ribs*) and the descending sides of *diaphragm* and, is called: recessus costodiaphragmaticus

# NAME STRUCTURES ACCORDING TO DEFINITIONS, TERMS SHOULD BE COMPOUND ADJECTIVES

Right or left opening between the *atrium* and *ventricle* is:

ostium    atrioventriculare

The anterior part of the superficial fibers of the medial collateral ligament of the ankle joint, attached superiorly to the anterior surface of the medial malleolus of the *tibia* and inferiorly to *the navicular bone* is:

pars    tibionavicularis    ligamenti    collateralis

The deep recess of the peritoneal cavity extending upward between the *liver* in front and the *kidney* behind is:

recessus    hepatorenalis

One of facial lymph nodes situated near the junction of the superior labial and facial arteries, which drains the external *nose* and upper *lip* into the submandibular node is called:

nodi    lymphatici    nasolabiales

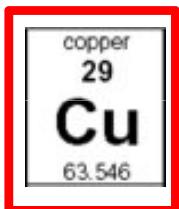

# FILL IN MISSING COMPOUND WORDS

Each lung is enclosed within a sac (*pleura*), which has two layers. Normally there is no space within these two layers except for a thin film of lubricating fluid. In certain lung diseases, however, a space may be forced between these layers by the **accumulation of fluid**, called: fluidothorax **of blood**, called: haemothorax or **of air**, called: pneumothorax; Sometimes there is a combination of more factors, e.g. of air ad blood in pericardium haemopneumopericardium / pneumohaemopericardium

Abnormalities detected in the analysis of urine are common in clinical practice. Their evaluation can lead to detection of serious underlying diseases. **Blood in urine**, which is both frightening and well visible is called haematuria. The presence of excess of serum proteins in urine is proteinuria, the presence of pus in urine is pyuria, and the excretion of glucose into urine is glycosuria.

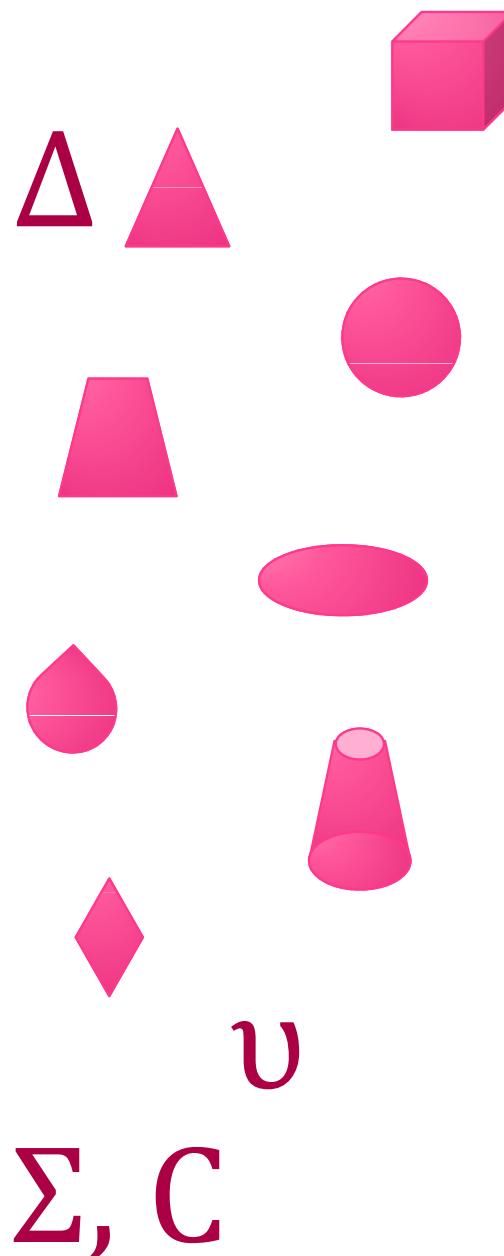

On the contrary, if there is **an excess of urea** (one of te main components of urine: i.e. amino acid and protein metabolism products) **in blood**, we call the state **ur(a)e mia**. Similarly, if there is **alcohol in patient's blood**, the medical term is **alcoholae mia**; if there are **pus-forming bacteria in blood**, the condition is called **pyaemia**. A condition of raised blood acidity (pH under 7.35) is then **acidae mia**; if the blood volume is increased as a result of **an increase in the water content of plasma**, we call the state **hydraemia**; and the pathological presence of copper in blood is then termed **cupraemia**.

# Expressing resemblance

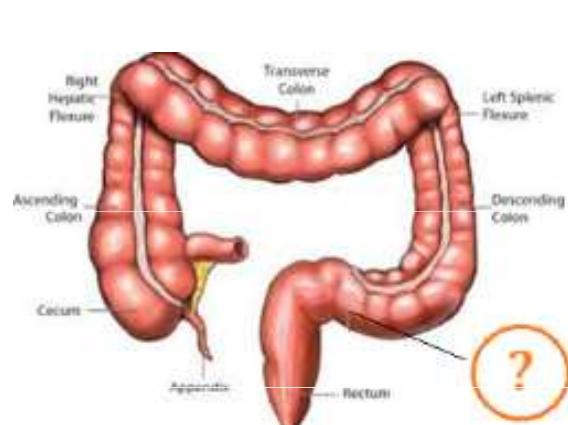

## FORM THE PHRASES AND MATCH THEM WITH SHAPES/LETTERS

1. os + cuboideus, a, um
2. musculus + deltoideus, a, um
3. articulatio + sphaeroideus, a, um
4. linea + trapezoideus, a, um
5. regio + ellipsoideus, a, um
6. ossa + sesamoideus, a, um
7. tuberculum + conoideus, a, um
8. musculus + rhomboideus, a, um
9. os + hyoideus, a, um
10. colon + sigmoideus, a, um

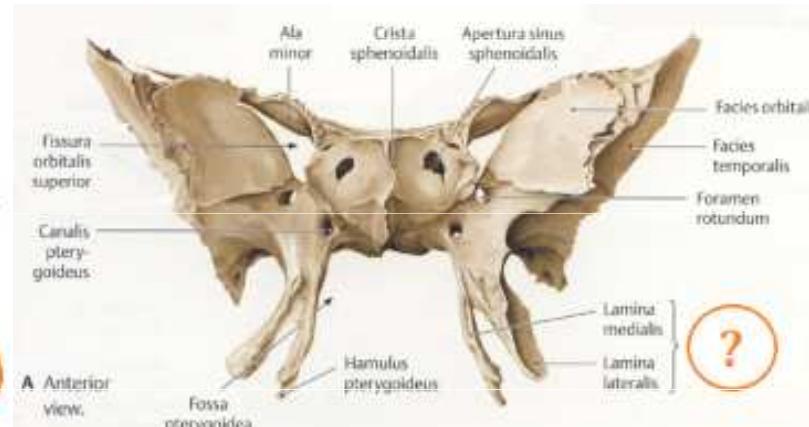

# FIGURE OUT THE ANATOMICAL NAMES FOR THE FOLLOWING STRUCTURES BASED ON RESEMBLANCE

sigma (Greek letter Σ)

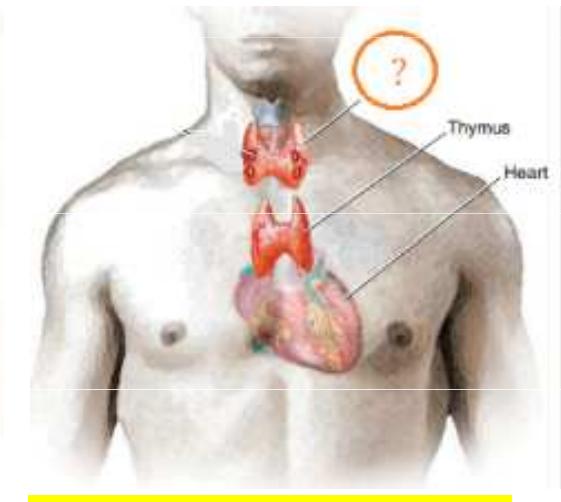

colon sigmoideum

pteryx, gen. pterygos (wing):

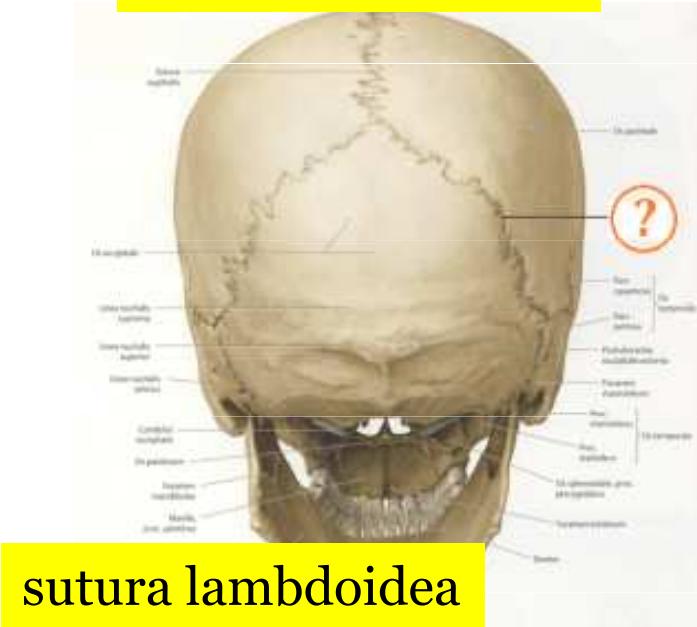

processus pterygoideus

thyros (shield)

glandula thyroidea

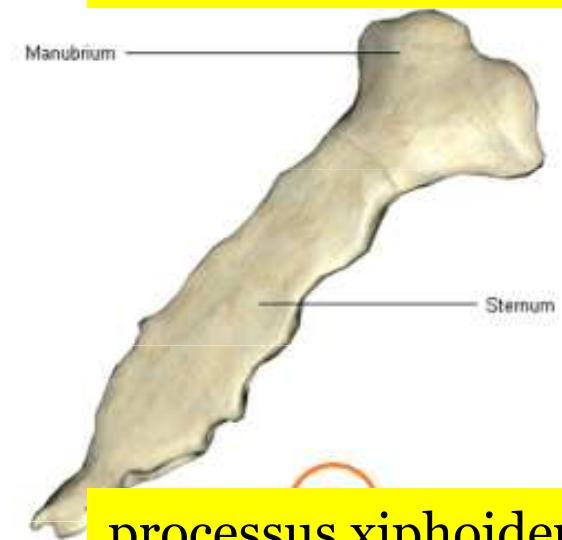

sutura lambdoidea

lambda (Greek letter Λ):

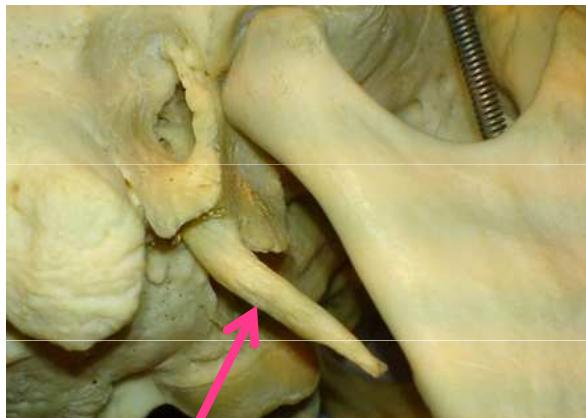

os scaphoideum  
skafe (boat):

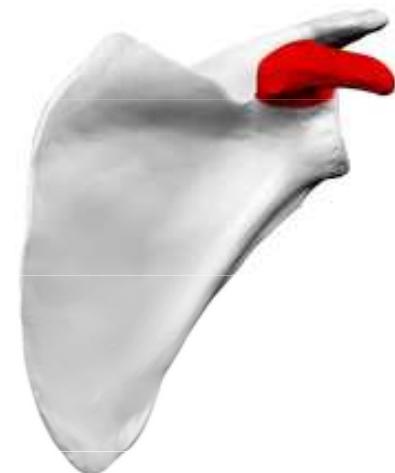

processus xiphoideus  
xifos (sword):

stylus (pen, writing tool)

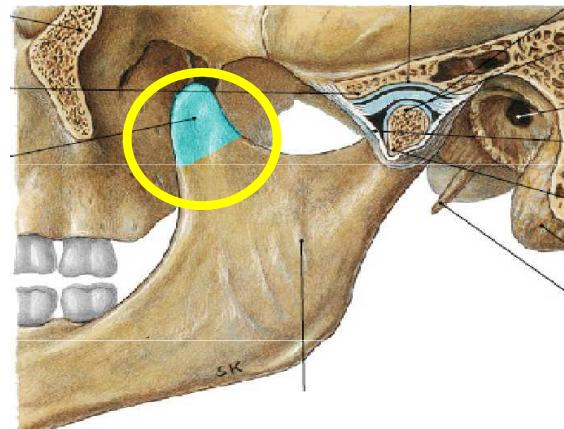

?

processus styloideus  
corax, gen. coracis (crow)

processus coracoideus

corona (crown)

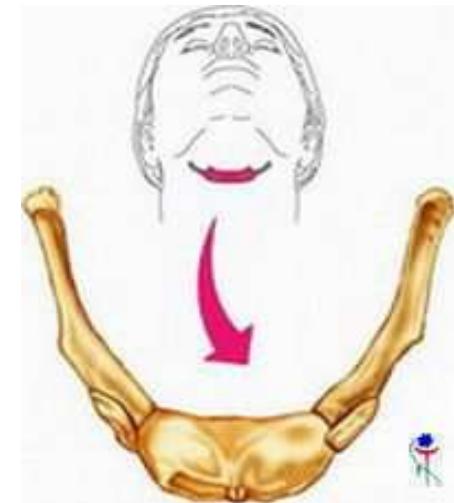

processus coronoideus  
pisum, gen. pisi (pea)

os pisiforme

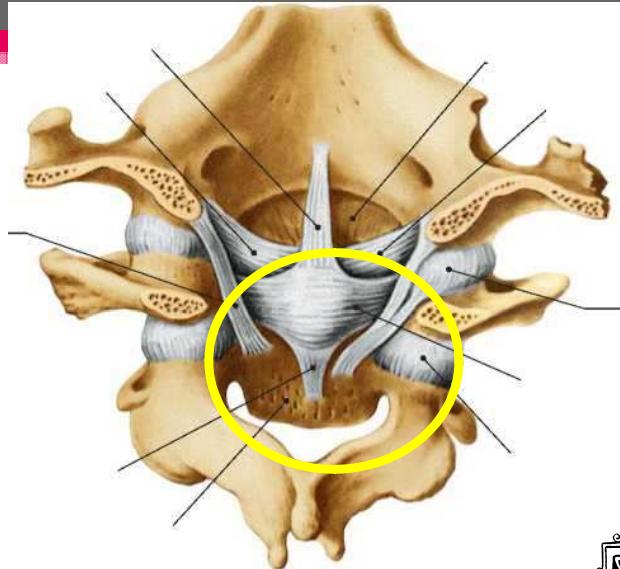

Greek letter  $\nu$

os hyoideum  
pirum, gen. piri (pear)

musculus piriformis

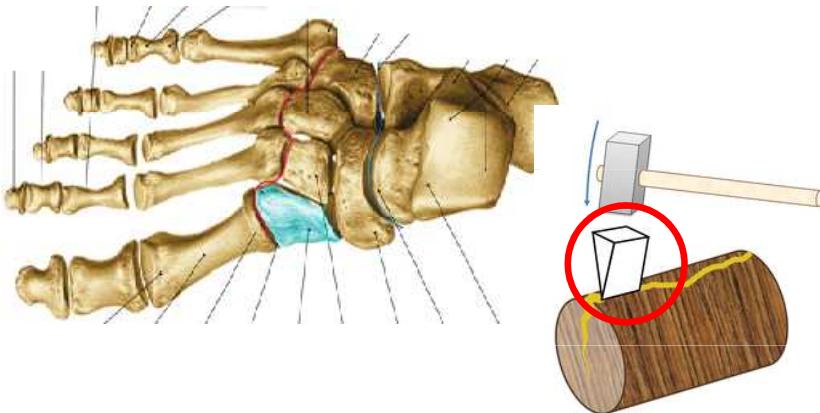

crux, gen. crucis (cross)

lig. \_\_\_\_\_ cruciforme

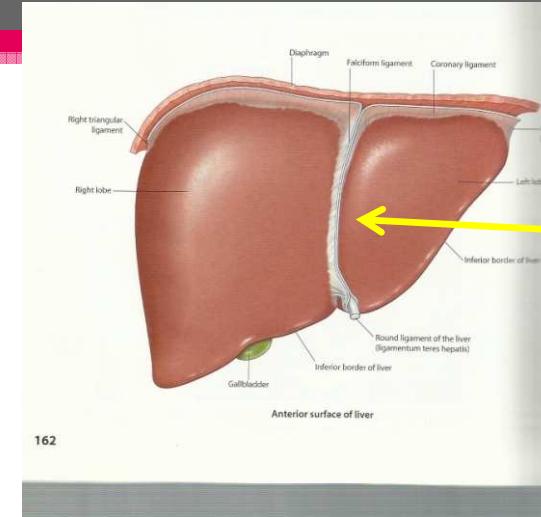

atlantis

cuneus, gen. cunei (trig, wedge)

os\_\_\_\_\_ cuneiforme

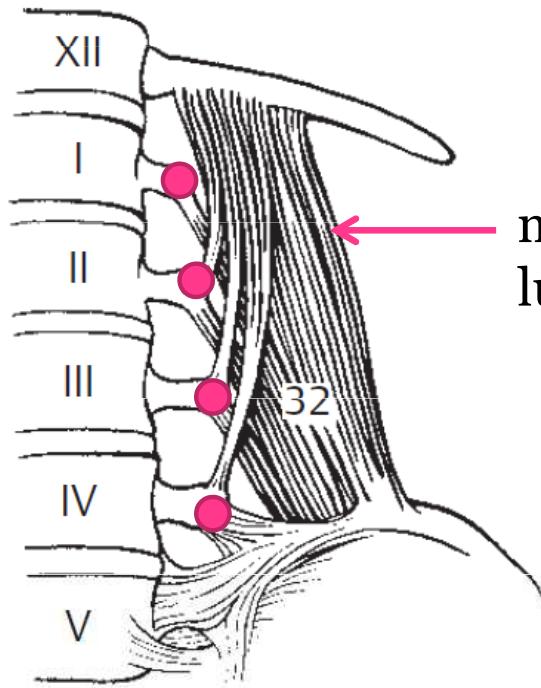

falx, gen. falcis (sickle)

lig. \_\_\_\_\_ falciforme \_\_\_\_\_ hepatis

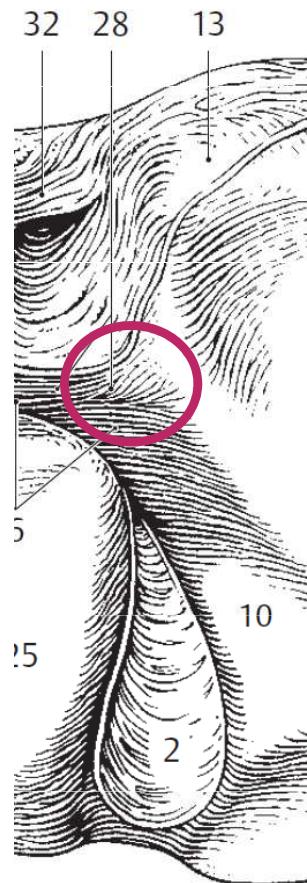

filum, gen. fili (fibre)

papillae \_\_\_\_\_ filiformes \_\_\_\_\_ linguae

m. quadratus  
lumborum

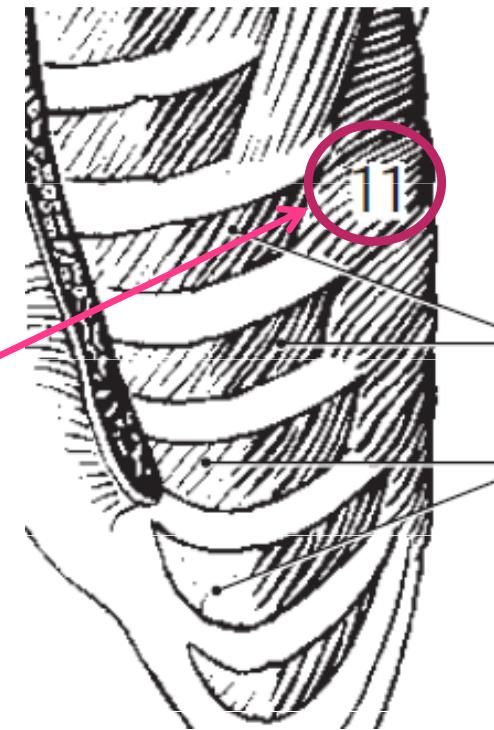

processus caudatus (hepatis)

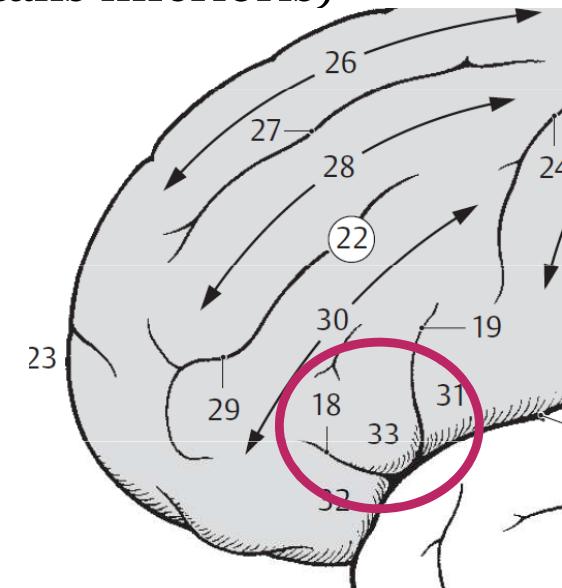

\* ≠ caudalis, e!!

m. serratus anterior

\**serra, ae, f.* = saw

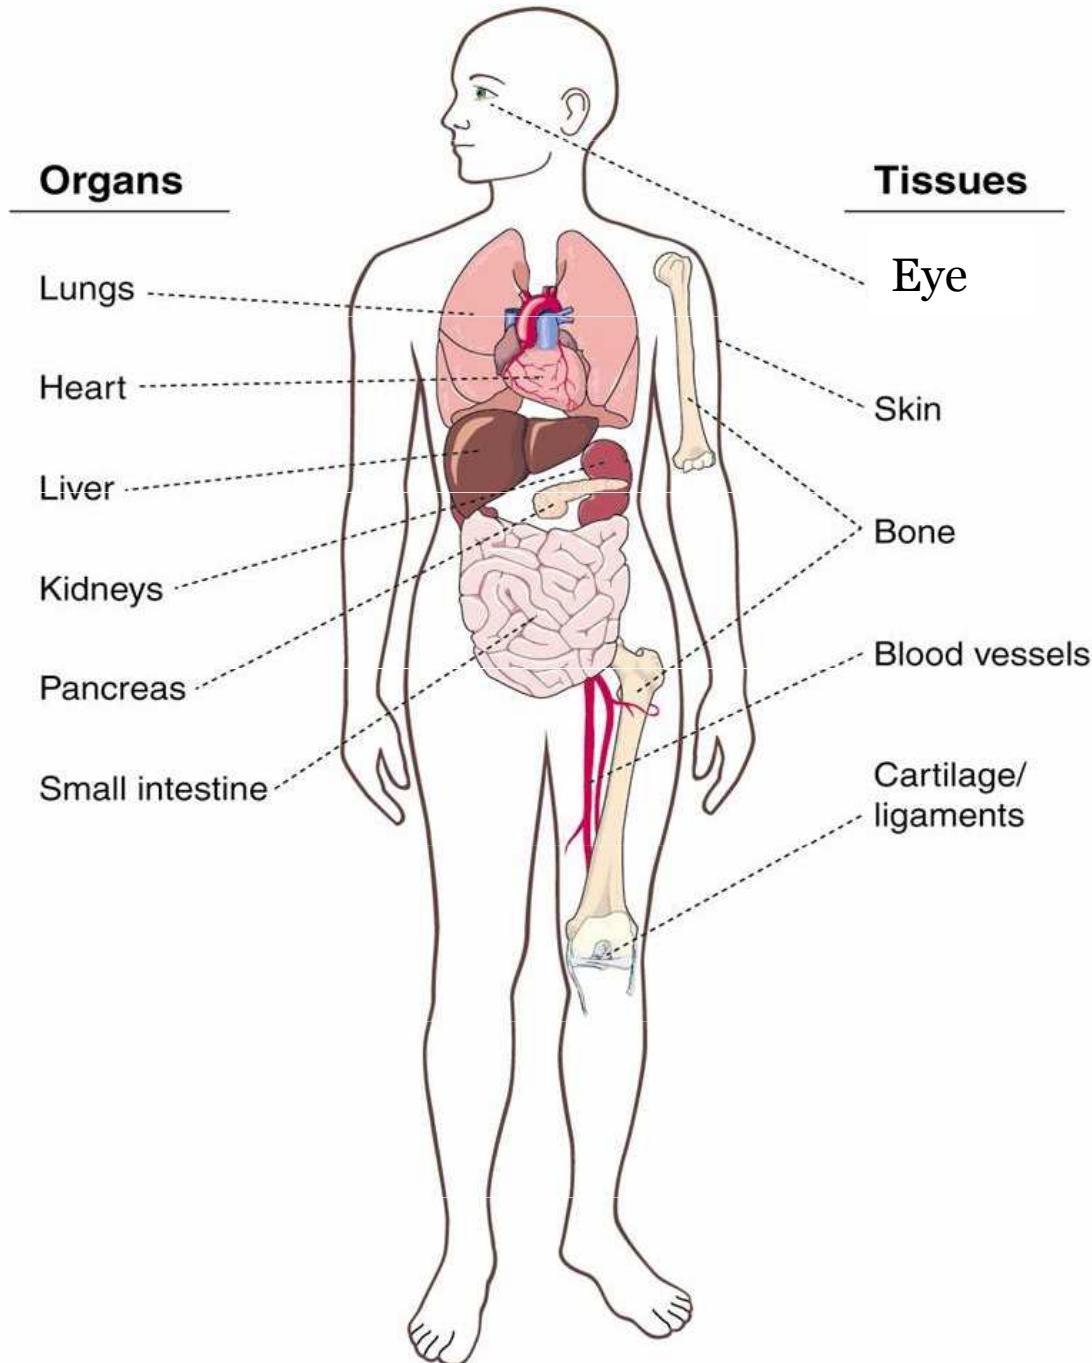

pars triangularis  
(gyri frontalis inferioris)

# GIVE GREEK COMPONENTS OF SELECTED BODY PARTS DERIVE TERMS FOR INFLAMMATIONS

Pneum(on)-  
Cardi-  
Hepat-  
Neph-  
Pancreat-  
Enter-

Ophthal-  
Derm(at)-  
Ost(e)-  
Angi-  
Chondr-

## **GIVE LATIN EQUIVALENTS (FULL FORM) TO GREEK COMPONENTS**

my-	<b>MUSCULUS, I, M.</b>
oste-	<b>OS, OSSIS, n.</b>
arthr-	<b>ARTICULATIO, ONIS, F.</b>
spondyl-	<b>VERTEBRA, AE, F.</b>
gon-	<b>GENU, US, N.</b>
stomat-	<b>OS, ORIS, N.</b>
somat-	<b>CORPUS, ORIS, N.</b>
cephal-	<b>CAPUT, ITIS, N.</b>

# **GIVE GREEK COMPONENTS WHICH CORRESPOND TO THE GIVEN LATIN WORDS**

- |                  |           |
|------------------|-----------|
| <b>1. VAS</b>    | ANGI-     |
| <b>2. VENA</b>   | PHLEB-    |
| <b>3. COR</b>    | CARDI-    |
| <b>4. REN</b>    | NEPHR-    |
| <b>5. VESICA</b> | CYST-     |
| <b>6. LINGUA</b> | GLOTT/SS- |
| <b>7. MAMMA</b>  | MAST-     |
| <b>8. CUTIS</b>  | DERM(AT)- |

# MATCH DEFINITIONS WITH THE GREEK COMPONENTS

The benign tumor made up of newly formed blood vessels is ?

The burning sensation caused by the return of acidic stomach contents into the oesophagus is called heartburn or ?

Condition in which excess cerebrospinal fluid accumulates in the ventricles of the brain is ?

The surgical removal of fat beneath the skin is ?

An accumulation of pus in the Fallopian tube is ?

The surgical removal of a kidney stone through an incision into the kidney is ?

A toxic condition resulting from renal failure in which kidney function is compromised and urea is retained in the blood is ?

***py-***

PYOSALPINX

***pyr-***

PYROSIS

***lith-***
