

## 1. seminar

### Basic anatomy of the nervous system

Nervous system

Divison, development

Neuron –types

REFLEX

Gray matter - nuclei

White matter – nerve tracts

- tractus

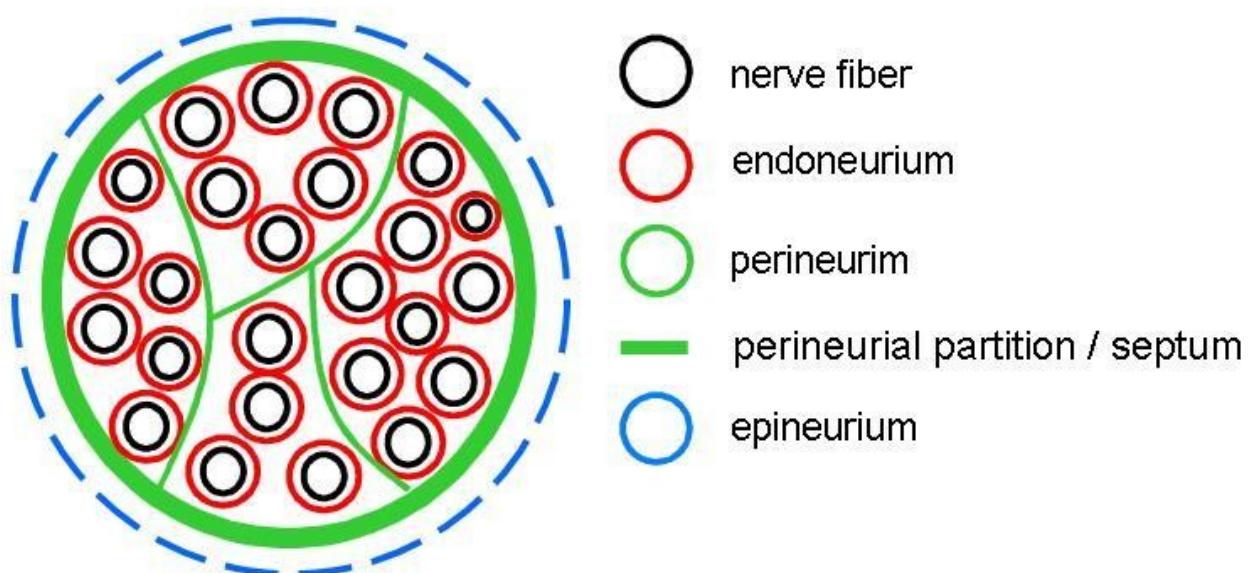

- fasciculus (lemniscus)

terms: afferent, eferent, ascendent, descendent

substantia alba x substantia grisea

nucleus motorius x terminationis

functional zones: sensory, motor, SS, VS, SM, VM, BM

## Anatomy of the spinal cord

**decussatio pyramidum – L2 – conus medullaris – filum terminale  
cauda equina  
intumescencia cervicalis (C3-T2) & lumbosacralis (T9-L1)**

**Fissura mediana anterior**  
**Sulcus medianus posterior**  
**Sulcus anterolateralis**  
**Sulcus posterolateralis**  
**Sulcus intermedius posterior**

**Funiculus anterior**  
    **lateralis**  
        **posterior- pars medialis- fasciculus gracilis**  
            **- pars lateralis- fasciculus cuneatus**

**Substantia grisea**  
- cornu anterius, lateralis (substantia intermedia), posterius  
- zona intermedia, zona centralis  
- columna anterior, lateralis – missing in C region- formatio reticularis, posterior  
- nuclei originis (motorii)  
– nucl.intermediolateralis et intermediomedialis  
– nucl.proprius  
- nucl.thoracicus  
- substantia gelatinosa Rolandi  
- nucl.apicalis

**Substantia alba**  
- funiculus ventralis, lateralis et dorsalis  
- fasciculus gracilis et cuneatus  
- tracts:  
    - tr.spinothalamicus  
    - tr.spinocerebellaris post.et ant.  
    - tr.spinoreticularis  
    - spinotectalis  
    - spinooolivaris  
    - tr.reticulospinalis  
    - tr.rubrospinalis  
    - tectospinalis  
    - olivospinalis,  
    - vestibulospinalis  
    - tr.corticospinalis lat.et ant.
