

Isolation of the operation field

Dry field in oral environment?

- Access
- View
- Setting of materials

What does complicate the access?

- Saliva
- Cooling water spray (??)
- Blood

Dry field management

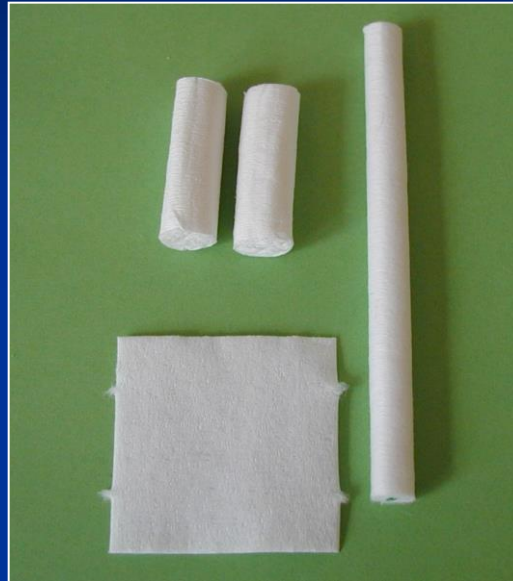

Relative dry field

Absolute dry field

Relative dry field

Cotton rollers

Cotton squares

Cotton cups

Relative dry field

- Belvedere matrix
- Wooden wedges
- Minidam

Wooden wedge

Access to the cavity
(retracts the gingiva)

Dry field
(stops bleeding)

- Matrix adaptation
(presses the strip tightly)

Absolute dry field

Rubber dam (kofferdam)

A membrane which isolates the operation field from oral environment.

Frame

Rubber

Perforation forceps

Clamp

Components

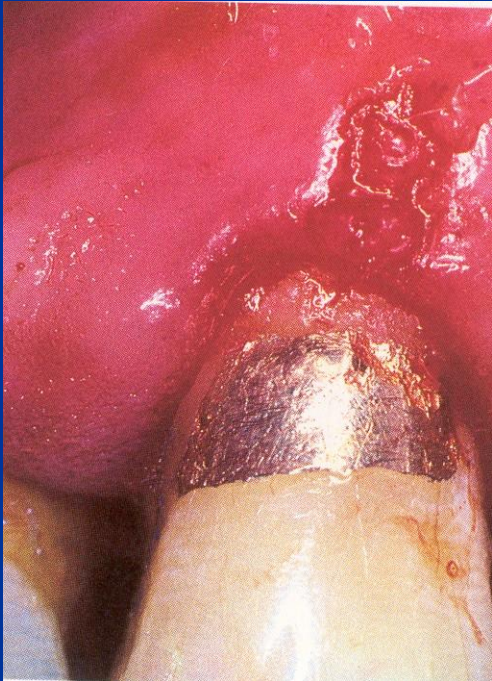

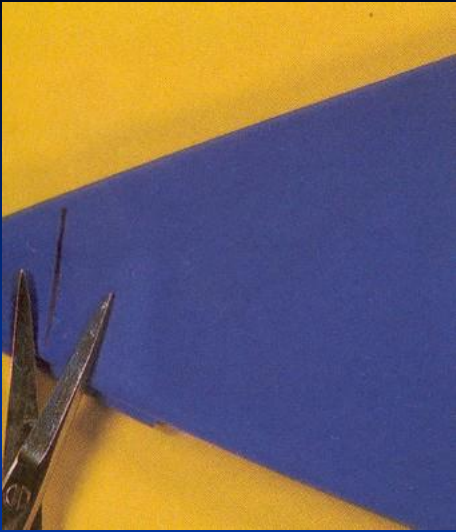

Forceps for clamps

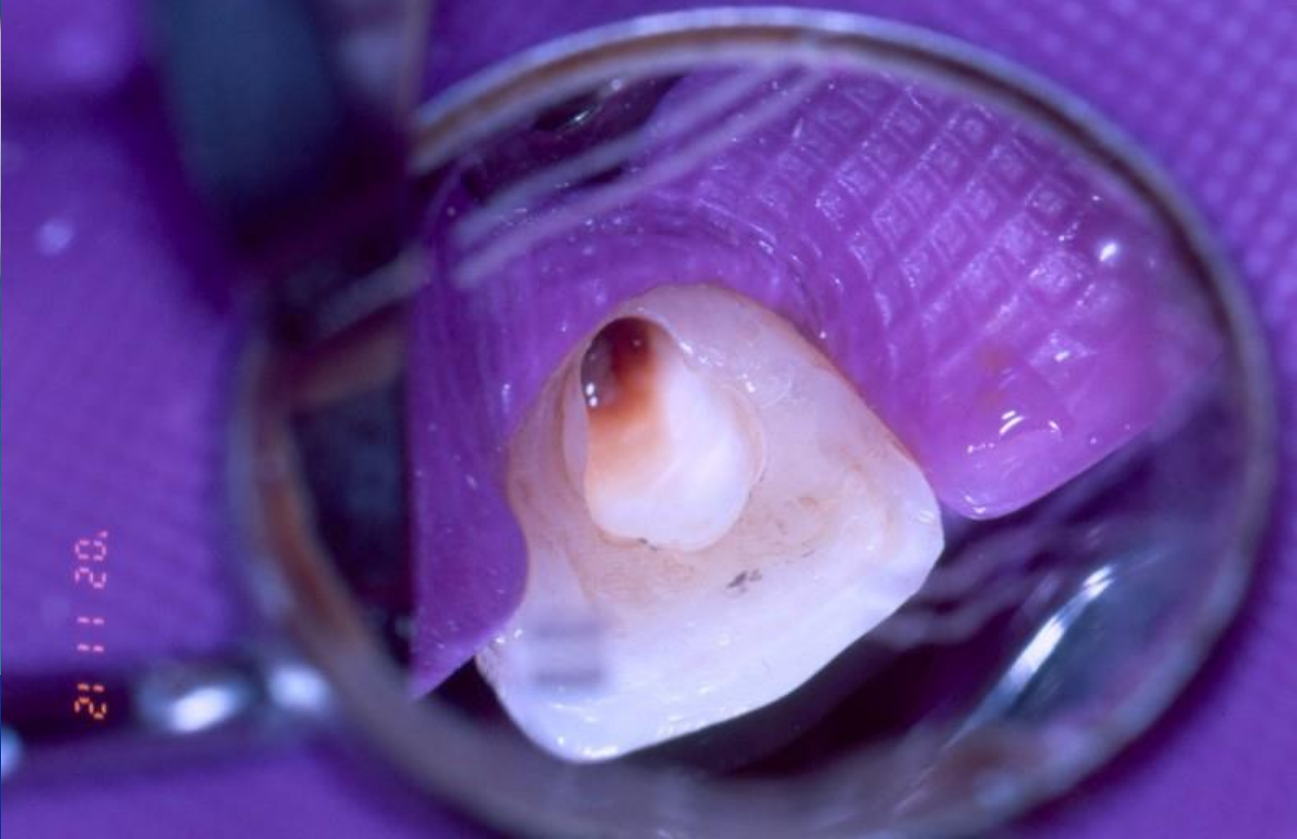

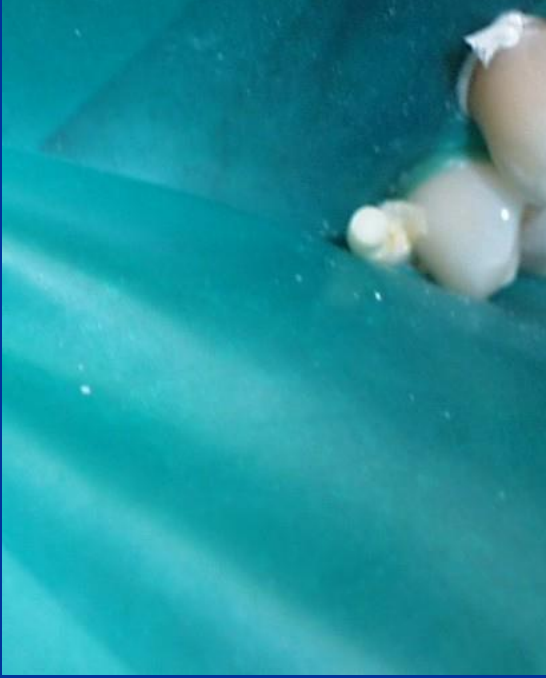

Benefits

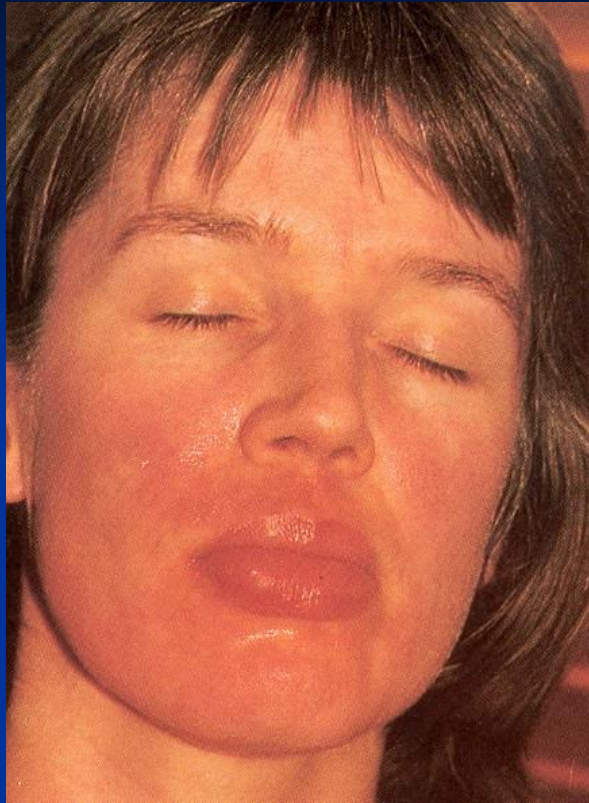

- Protection of patient against gulp or aspiration
- Protection of dentist and assistant against infection
- Possibility of the aseptic approach
- Absolute dry field
- Retraction of soft tissues
- Protection of soft tissues
- Better access to the operation field

Nevýhody a nebezpečí kofferdamu

- Limitation of oral breathing
- Fear
- Latex allergy
- Aspiration or gulp of the clamp
- Damage of hard and soft tissues

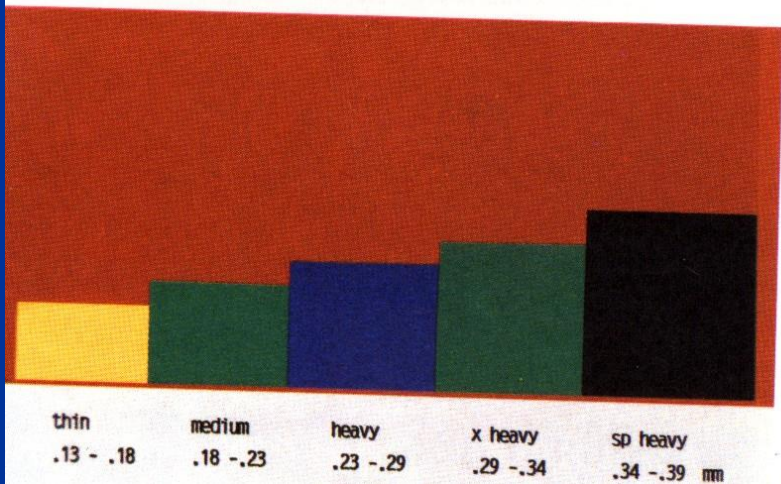

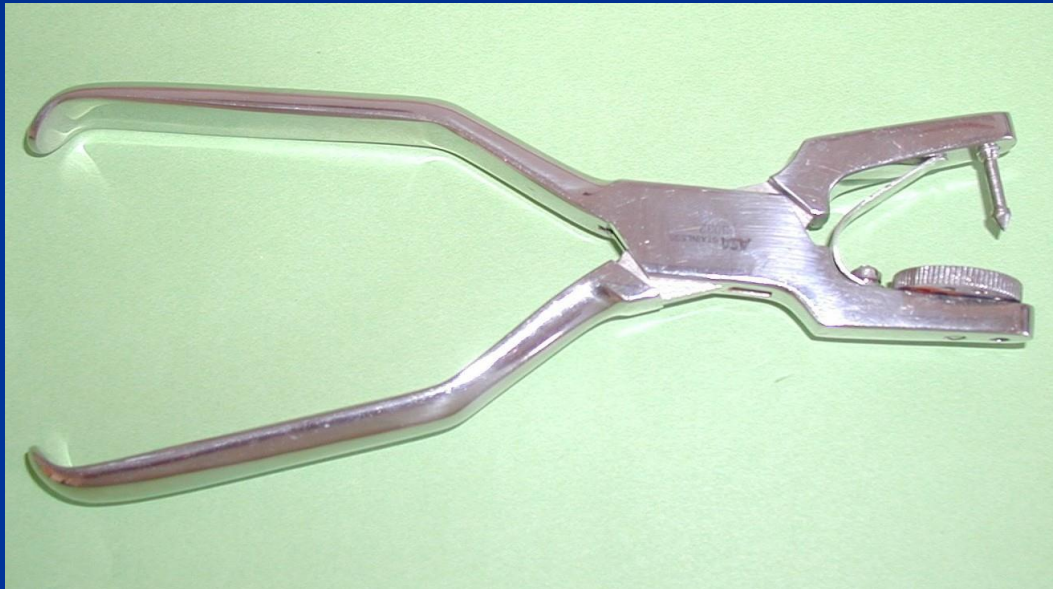

Rubber

Roll

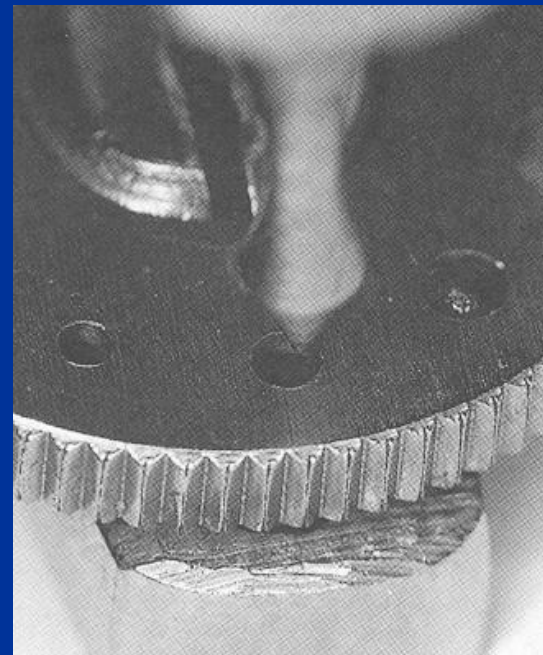

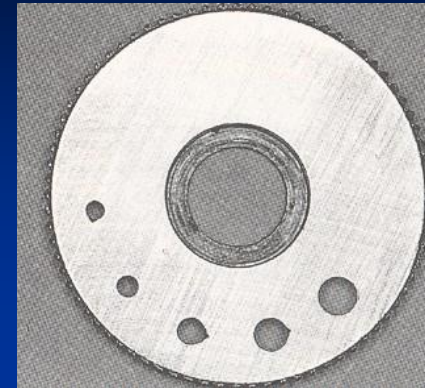

Square (blank)

Perforation

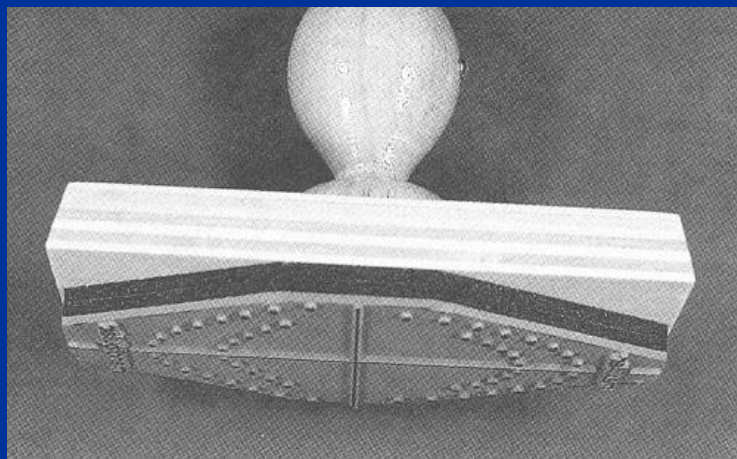

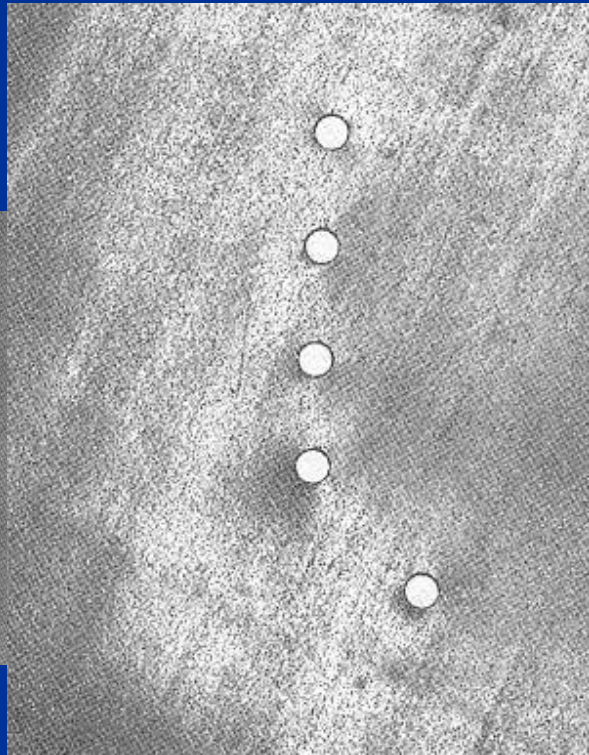

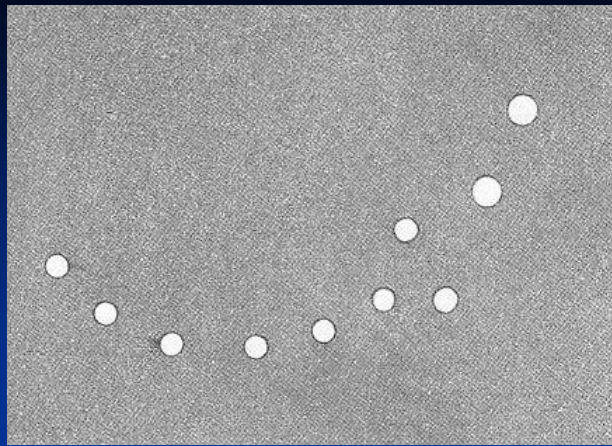

Round aperture

Perforation plate

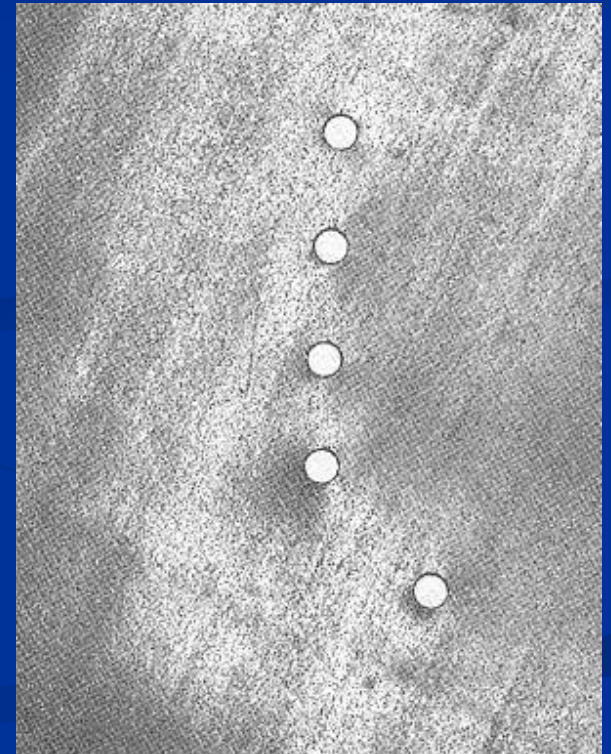

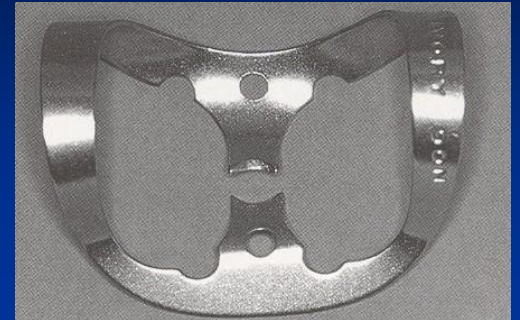

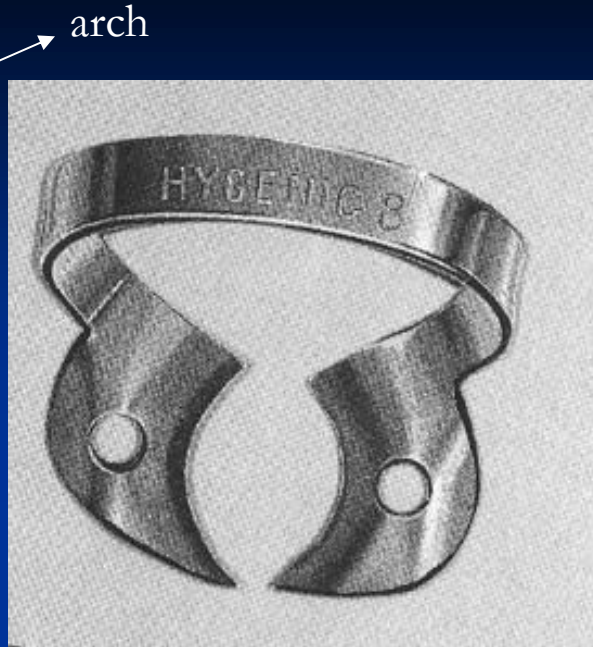

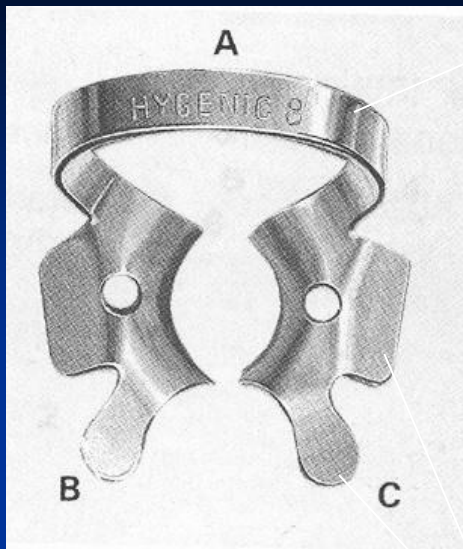

Jak velká bude perforace?

Podle velikosti zubu

Podle síly a druhu blány

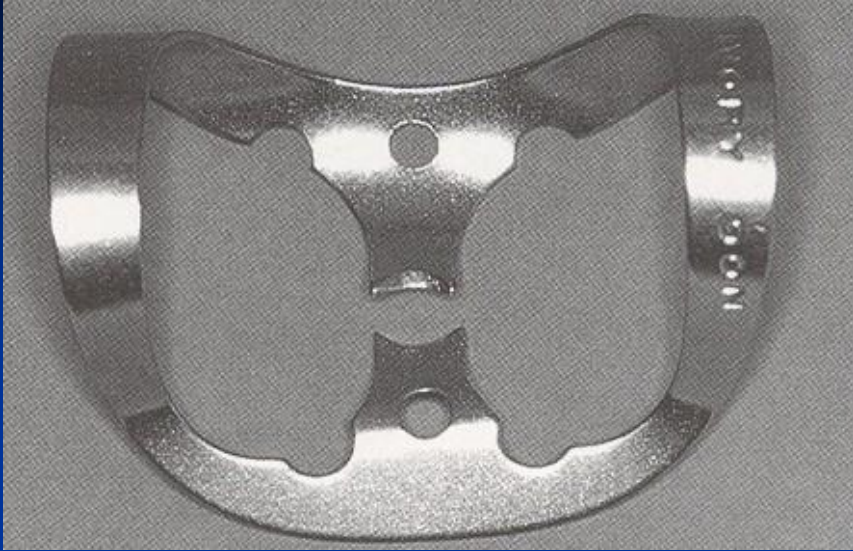

Podle způsobu nasazení kofferdamu

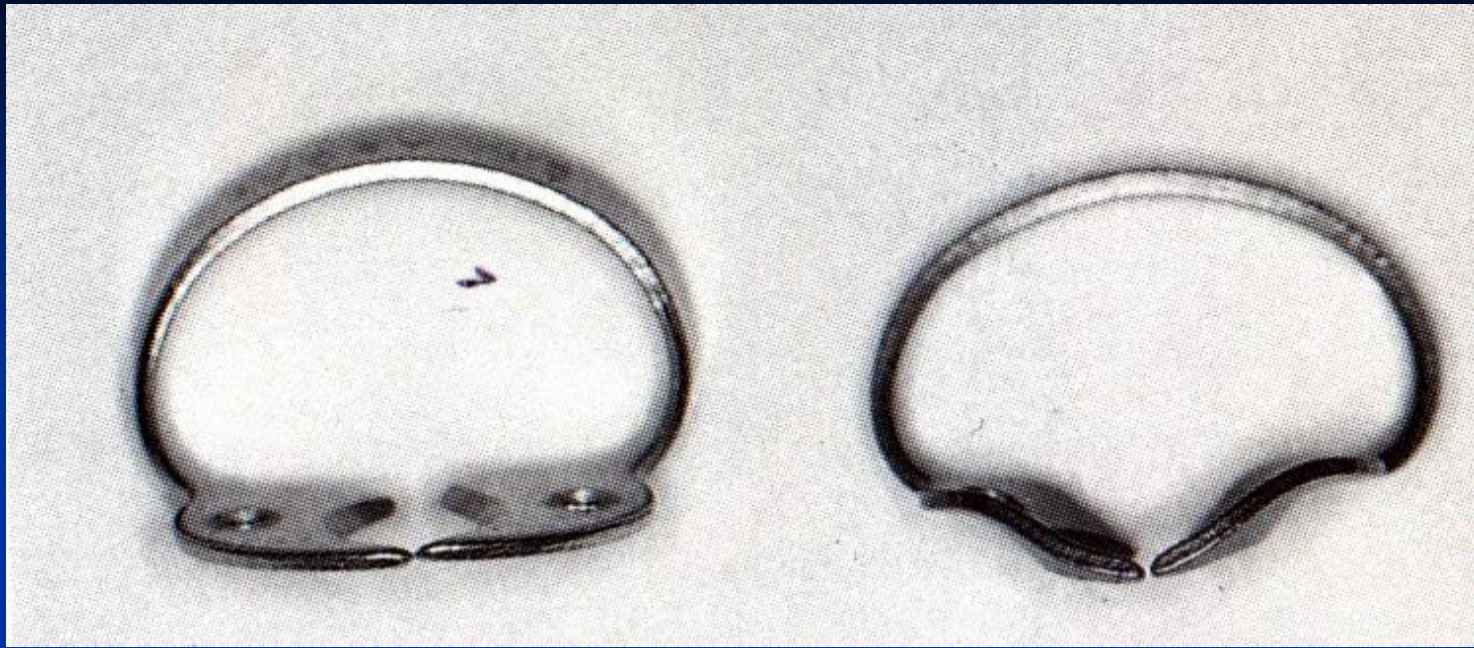

wings

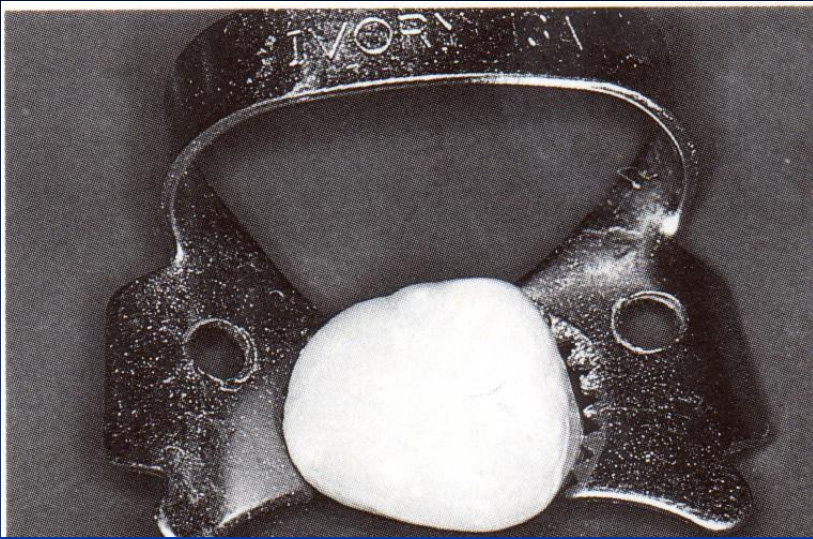

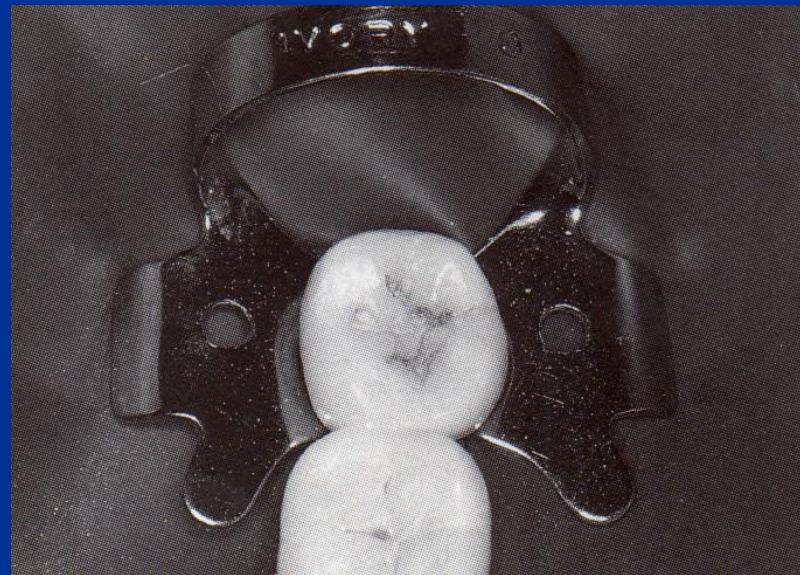

Clamps for retention

Clamps for retraction

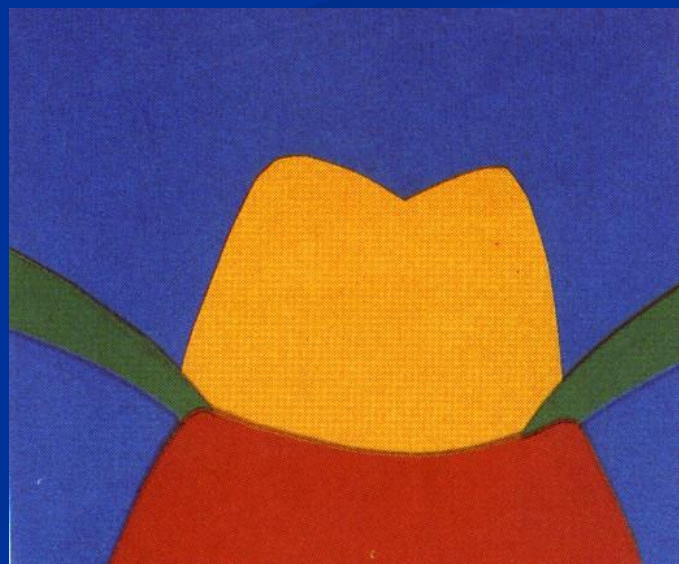

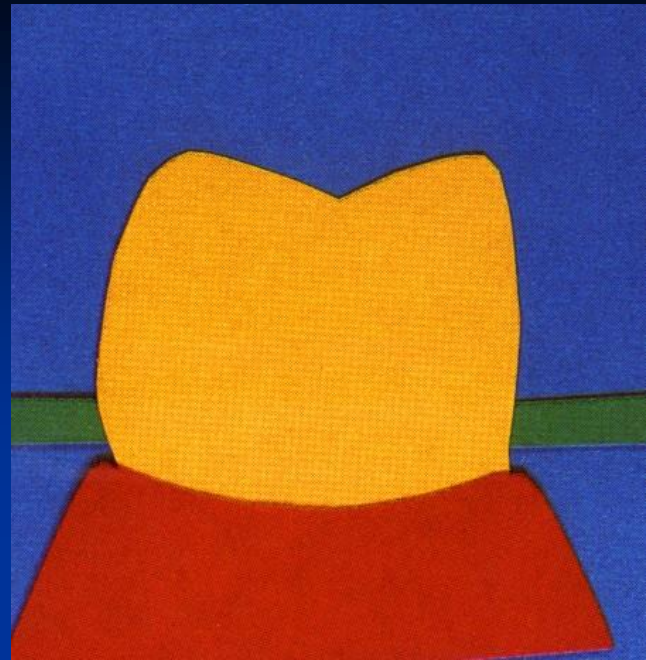

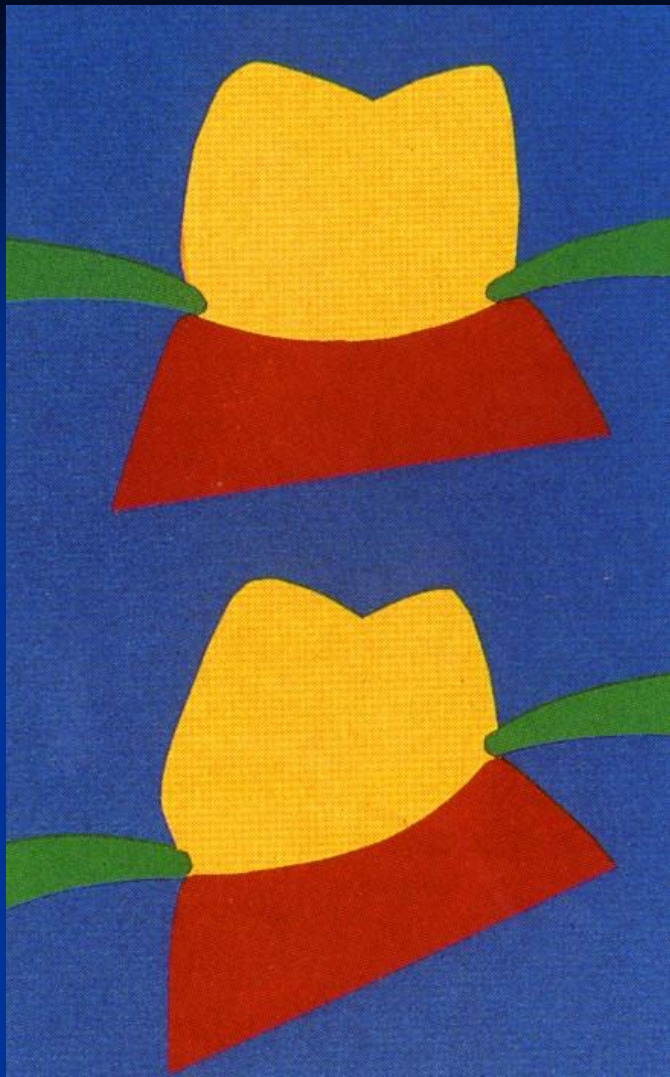

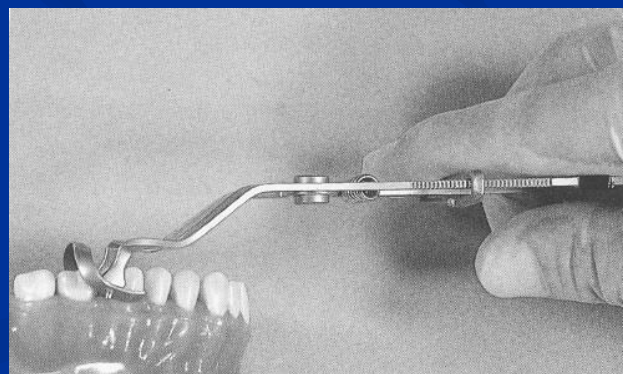

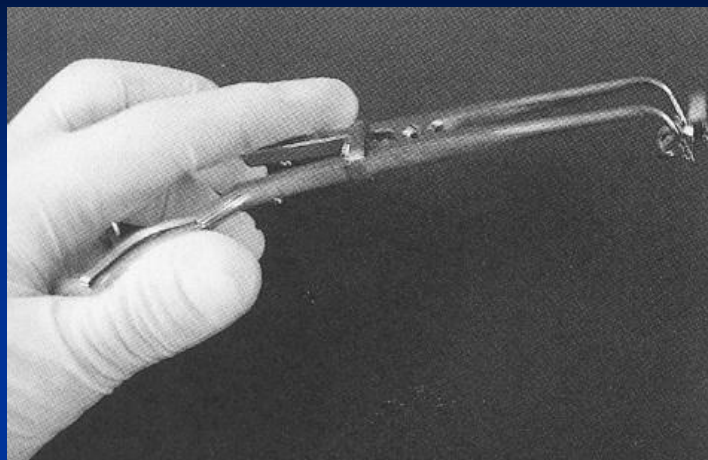

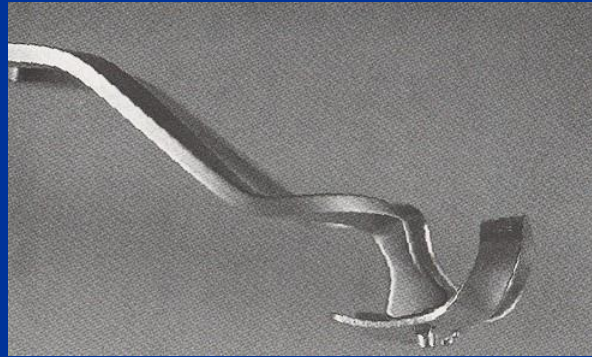

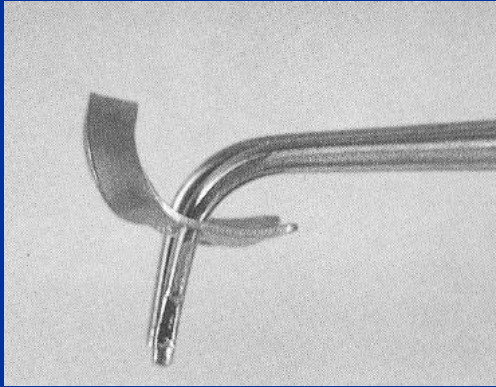

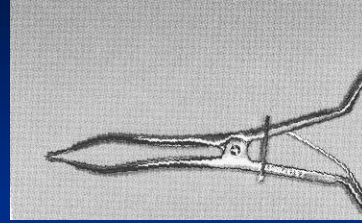

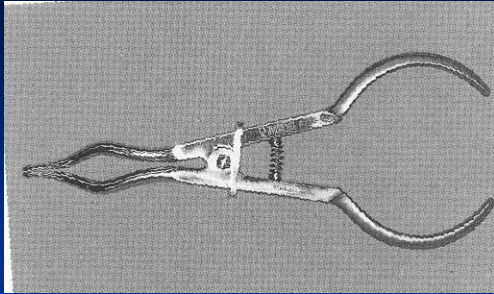

Contact – areal

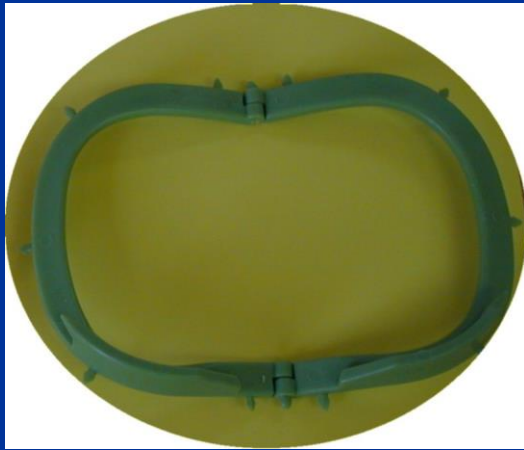

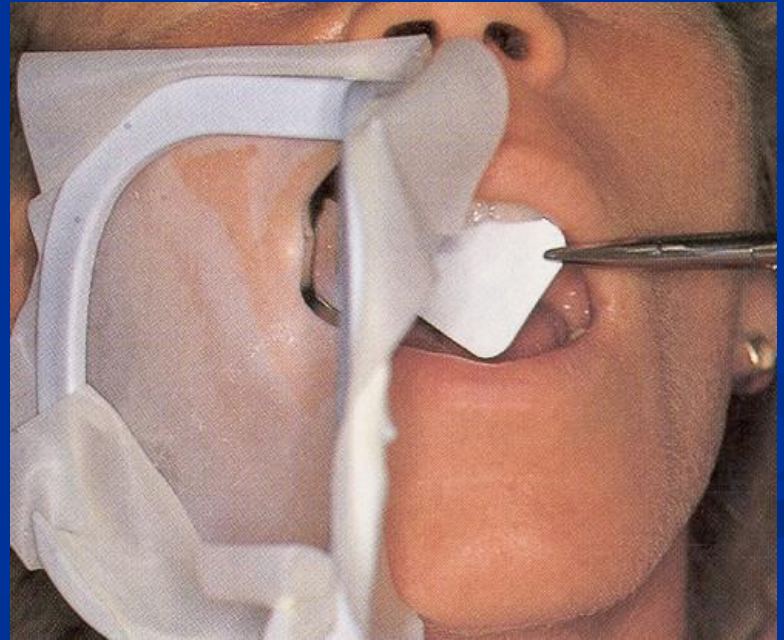

4 pointed

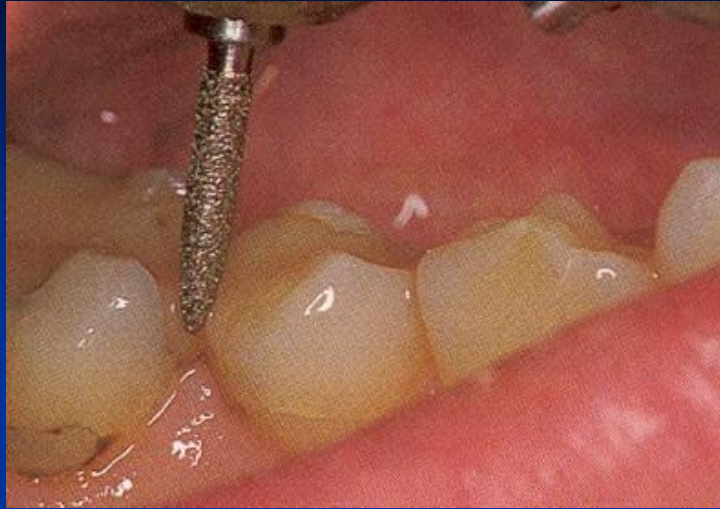

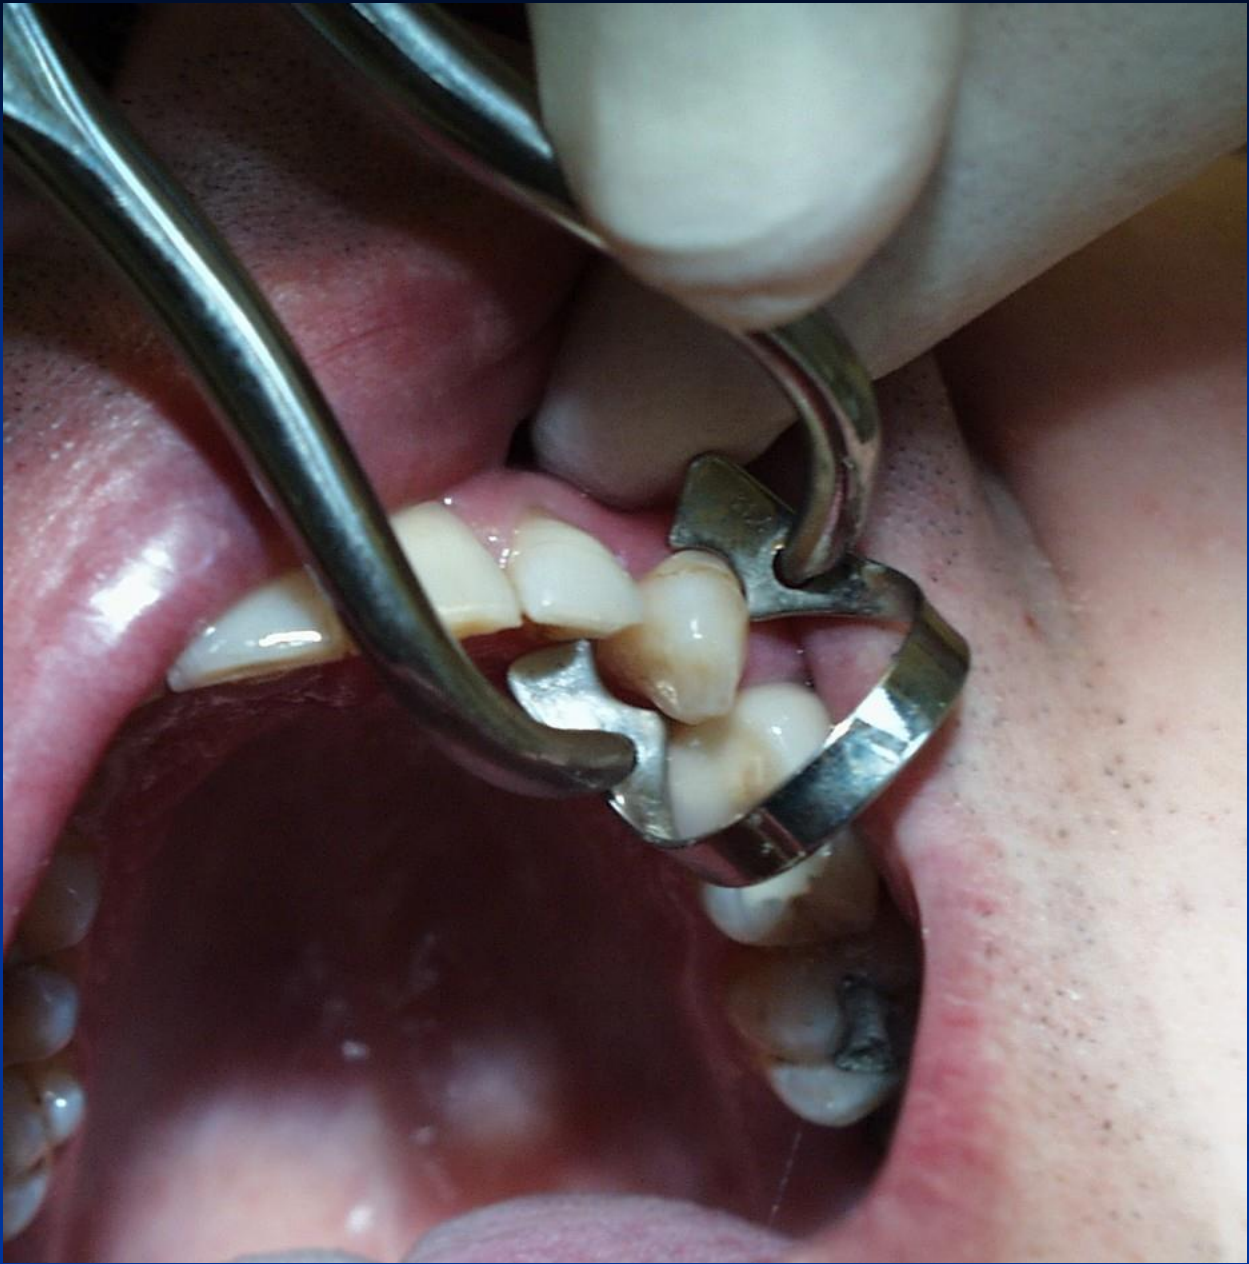

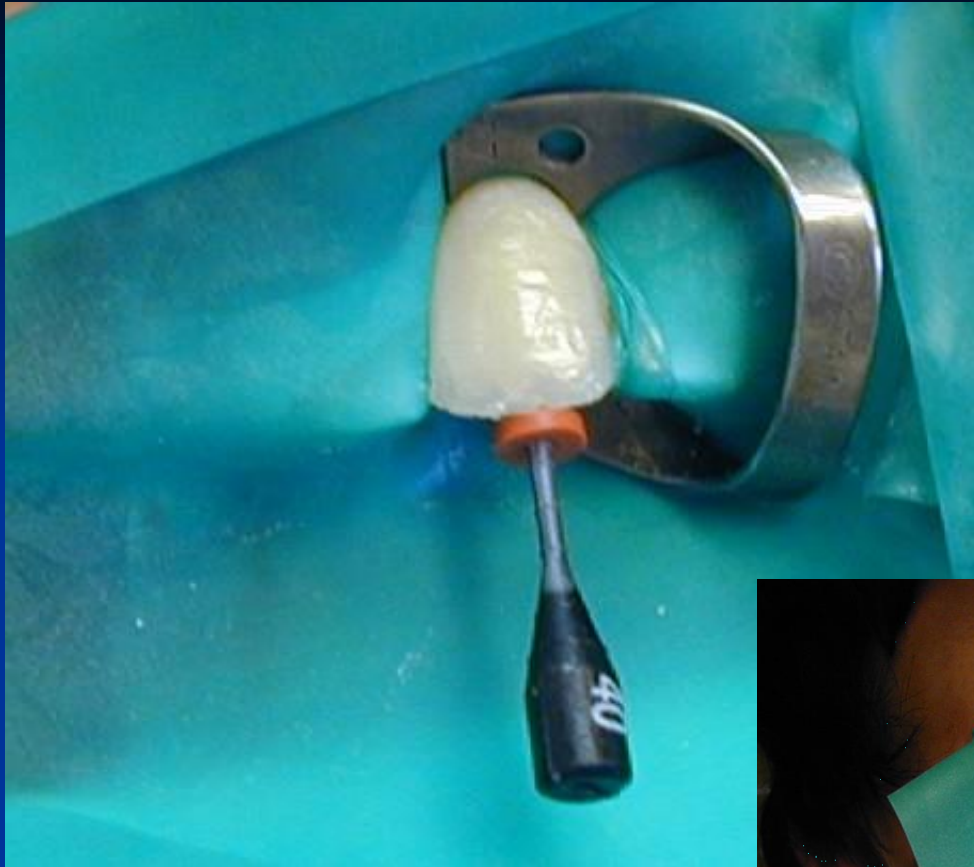

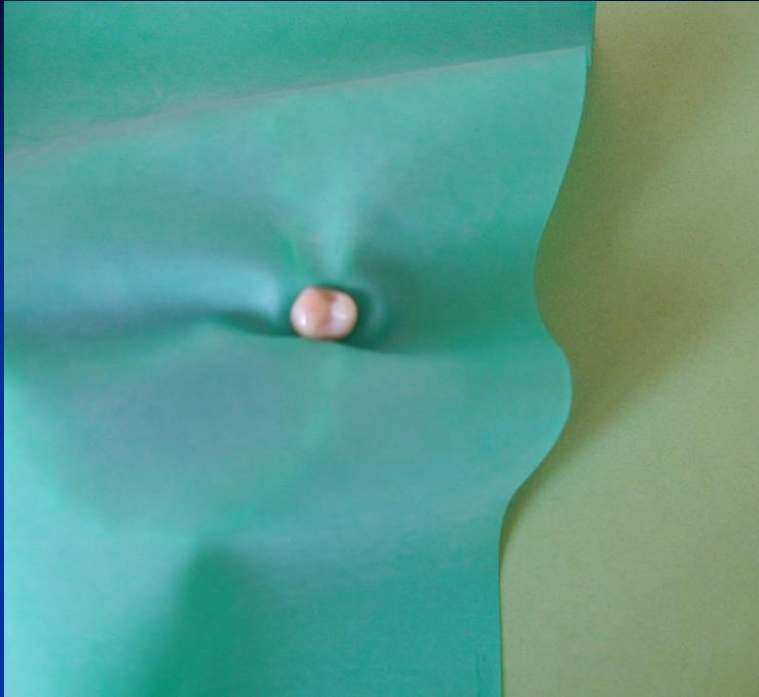

Kolik zubů izolovat ?

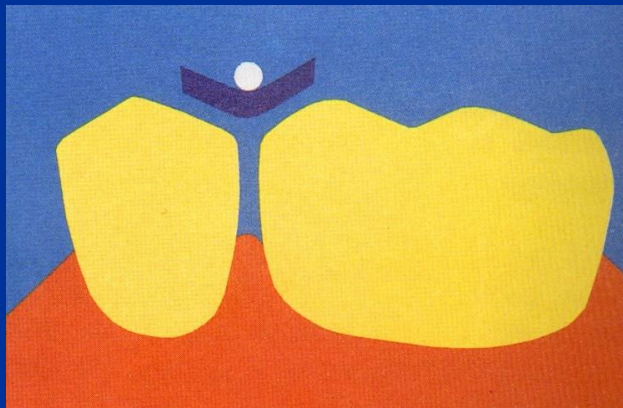

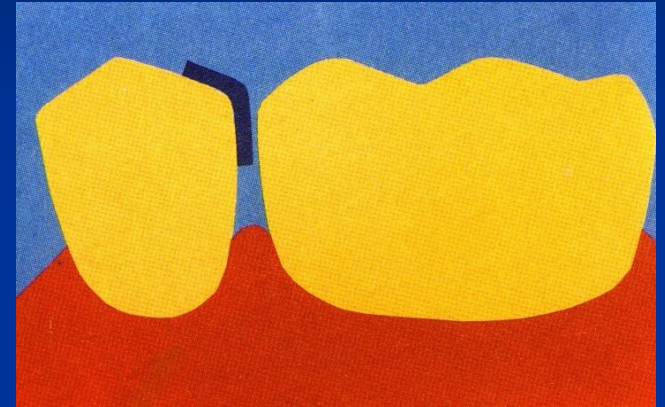

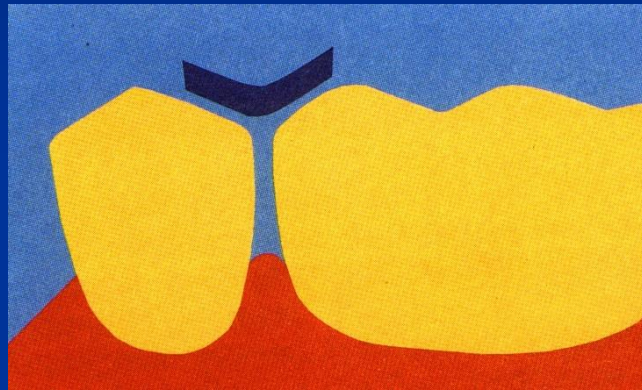

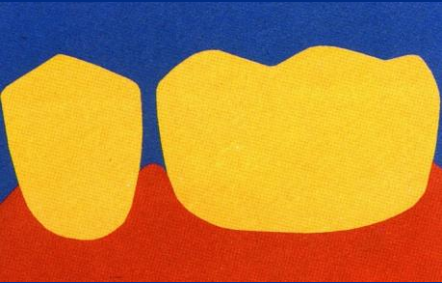

Způsoby nasazení

- Napřed blána, potom spona
- Napřed spona potom blána
- Přes oblouk spony
- Sekundové nasazení

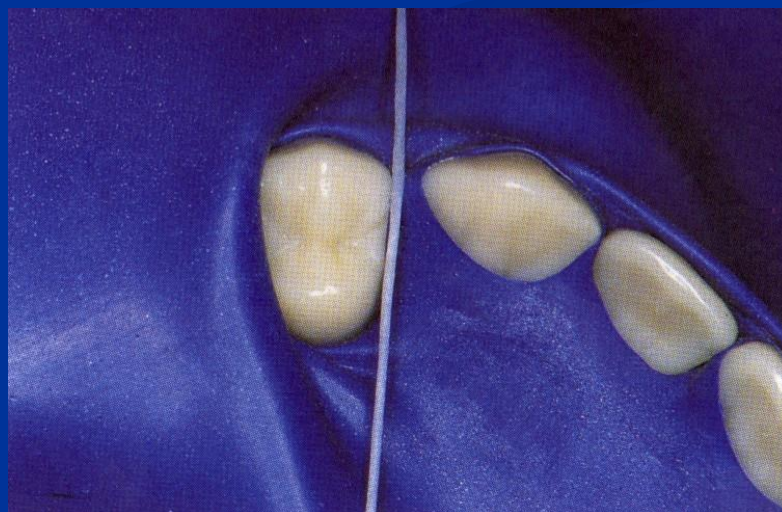

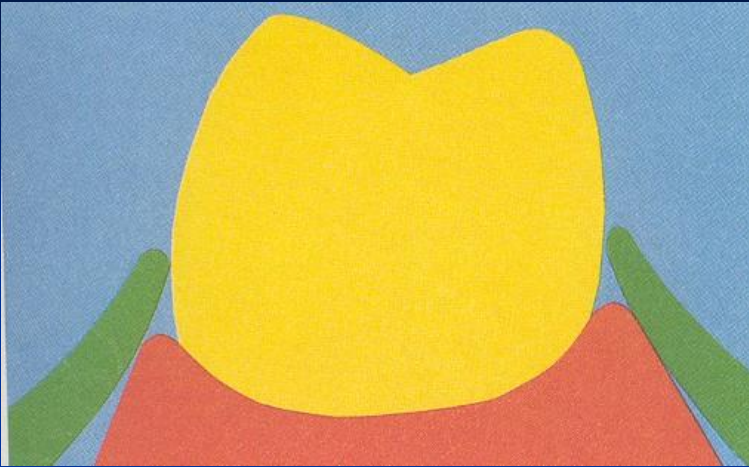

Interdental adaptation

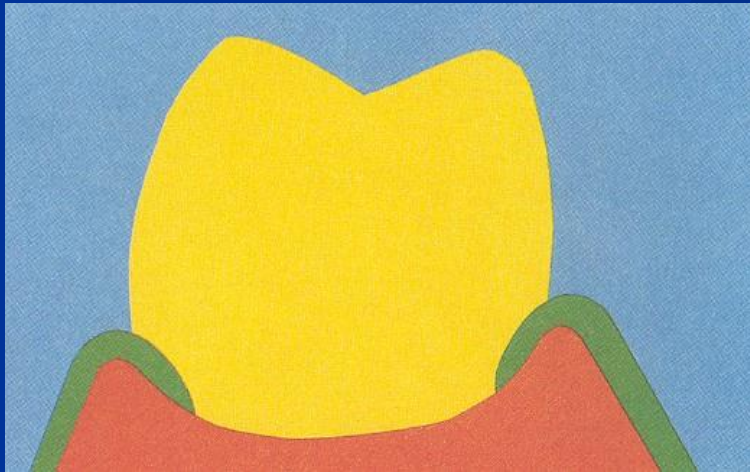

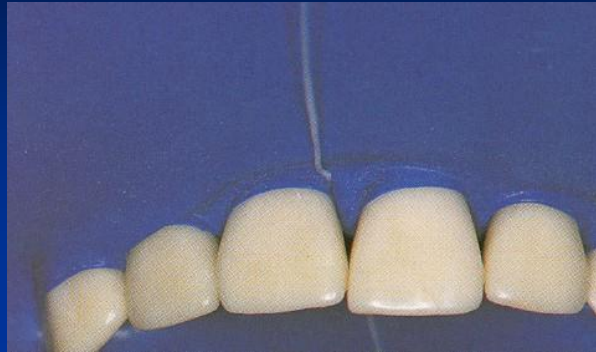

Interdentální adaptace

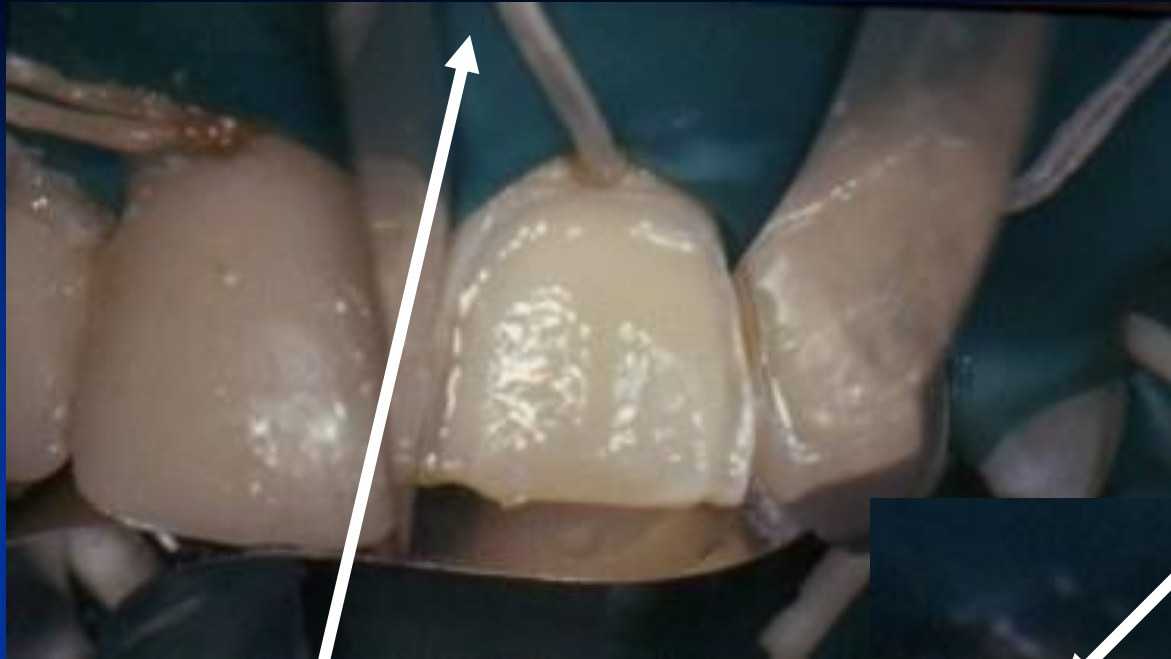

inversion
