# **The Highest Functions of Nervous System - Psychological and Social Aspects of Brain Activity I**

# Frontal association area

- Executive function
  - Motor / behavioral
  - Cognitive
- Mostly developed in human

1. *Australopithecus robustus*
2. *Homo habilis*
3. *Homo erectus*
4. *Homo sapiens neanderthalensis*
5. *Homo sapiens sapiens*

# Functions of frontal association area

- Motor/non-motor planning/organization - strategy - anticipation

- Thinking – mental models processing

- Attention – „information filtering“

- Behavioral control
  - Facilitation of „wanted“
  - Inhibition of „unwanted“

**Social brain may be considered as  
an anticipation in social context**

<http://thenextweb.com/wp-content/blogs.dir/1/files/2015/03/jerry1.jpg>

# Socialization

- ✓ Socialization is an evolutionary strategy of „weak/less skilfull“
- ✓ Socialization allows its members to be „weak/less sklifull“
- ✓ The social group brings its members benefits which could not be achieved on an individual basis
- ✓ Society
  - Collaboration
  - Categorization of duties and responsibilities
  - Hierearchy

## LIMBIC SYSTEM

### Top 100 Phobia List

These are the top 100 phobias in the world, with the most common ones listed from the top. You can click on each phobia to learn about causes, symptoms and treatments.

1. Arachnophobia – The fear of spiders affects women four times more (48% women and 12% men).
2. Ophidiophobia – The fear of snakes. Phobics avoid certain cities because they have more snakes.
3. Acrophobia – The fear of heights. Five percent of the general population suffer from this phobia.
4. Agoraphobia – The fear of open or crowded spaces. People with this fear often won't leave home.
5. Cynophobia – The fear of dogs. This includes everything from small Poodles to large Great Danes.
6. Astraphobia – The fear of thunder/lightning AKA Brontophobia, Tonitrophobia, Ceraunophobia.
7. Claustrophobia – The fear of small spaces like elevators, small rooms and other enclosed spaces.
8. Mysophobia – The fear of germs. It is also rightly termed as Germophobia or Bacteriophobia.
9. Aerophobia – The fear of flying. 25 million Americans share a fear of flying.
10. Trypophobia – The fear of holes is an unusual but pretty common phobia.

✓ Environment

# Every brain is a powerful machine...

... which is hard to control

✓ The conflict between the limbic system and the neocortex

✓ The problem with effective control of the neocortex

## 86. The basic characterization of neocortical functions – language and social brain, basic overview of functional diagnostic methods used in neurology

- Communication and language
  - Language areas – localization and function including lobulus parietalis inferior, aphasia...
  - Lateralization of language functions, gender differences
- Social brain
  - Human is a social being, so the brain has to be designed accordingly
  - Frontal lobe and limbic system in behavioral control
  - Triune brain theory, whole brain model, mentalization, dehumanization
- Functional diagnostic methods (EEG, SPECT, PET , fMRI)
