

Introduction to Basic Medical Terminology

(aVLLT0121)

AUTUMN 2019

Course requirements and rules

- **STUDY MATERIALS**

- materials available in the IS
- textbook: Prucklová, R. – Severová, M.: *Introduction to Latin and Greek Terminology in Medicine*. Praha: KLP, 2012 (Units 1–7)
- drill on the IS (<https://is.muni.cz/auth/drill/?lang=en>)

- **TESTING**

- 2 progress tests (pass limit = 70%)
- credit test (pass limit: 60–70%)
- rules for testing
- access to test results

- **CLASS ATTENDANCE AND SUBSTITUTIONS**

Latin in medical terminology

= **universal**, **precise** and **flexible** system of terms used in:

- **anatomical nomenclature** (= definite set of terms denoting parts and structures of the human body)
 - first worldwide official standard terminology appeared in 1895 (*Basiliensia Nomina Anatomica*), since then it has been periodically updated and changed to implement new findings and/or understanding of the anatomical structures
 - current terminology, approved by FCAT (Federative Committee on Anatomical Terminology), was published in 1998 as TERMINOLOGIA ANATOMICA (cf. <http://www.unifr.ch>)

Anatomical structures

- | | | | | | |
|----|--------------------------|----|------------------------------------|----|----------------------------------|
| 5 | bulbus aortae | 12 | ramus atrialis intermedius | 19 | ramus coni arteriosi |
| 6 | arteria coronaria dextra | 13 | ramus interventricularis posterior | 20 | ramus lateralis |
| 7 | rami atrioventriculares | 14 | rami interventriculares septales | 21 | rami interventriculares septales |
| 8 | ramus coni arteriosi | 15 | ramus nodi atrioventricularis | 22 | ramus circumflexus |
| 9 | ramus nodi sinuatrialis | 16 | ramus posterolateralis dexter | 23 | ramus atrialis anastomoticus |
| 10 | ramia atriales | 17 | arteria coronaria sinistra | | |
| 11 | ramus marginalis dexter | 18 | ramus interventricularis major | | |

Anatomical structures

Latin in medical terminology

= **universal**, **precise** and **flexible** system of terms used in:

- **clinical terminology** (= non-definite set of terms denoting diseases, health conditions or causes of death)
 - the first international classification of diseases was adopted in 1893
 - current terminology ICD-10 (*International Classification of Diseases*) is approved by WHO and published every \pm 10 years (www.who.int/classifications/icd/en/)
 - widely used in medical documentation, e.g. in medical reports, surgical and hospital reports, pathological reports (central Europe, Russia and former republics of USSR, partly Western Europe – Germany, Austria)

Clinical diagnosis

Dissection protocol

I.a/ Otok mozku, podchlazení
c/ Podchlazení organismu

E 901, 991

I.

CONGELATIO.

Alcoholaemia :

Alcoholuria :

Livores mortis lucide rubri.

II.

Oedema cerebri grave, conus occipitalis et temporalis. Ecchymoses aliquot subpleurales. Venostasis acuta pulmonum. Haemorrhagiae dispersae pulmonum. Sanguis ventriculorum cordis liquidus. Venostasis acuta organorum abdominalium.

III.

Oedema cerebri. Congelatio.

IV.

Atherosclerosis aortae I. gradus et arteriarum periphericarum minoris gradus. Bronchitis catarrhalis chronica. Emphysema chronicum vesicularum pulmonum. Hypertrophia trabecularis concentricae ventriculi dextri cordis /cor pulmonale/. Haematoma subcutanema faciei, extremitarum inferiorum et superiorum. Excoriationes superficiales cutis dorsi manus usriusque.

Latin in medical terminology

= **universal**, **precise** and **flexible** system of terms used in:

- **pharmacological terminology** = definite set of terms used in European Pharmacopoea to denote:
 - essential medicines (*acidum phosphoricum*)
 - classes of medicines (*antipyretica, spasmolytica*)
 - forms of medicines (*solutio, injectio, tabuletta*)
 - drugs (*calendula officinalis*)
- **prescriptions**
 - the main part of the prescription (including the name and quantity of the medicine as well as the way of its administration) is usually written in Latin, using a system of standard abbreviations

Medical prescription

Learning outcomes

At the end of the course, you will be able to:

- understand the structure of anatomical terms and apply them correctly (this makes the memorizing of anatomical terminology much easier!)
- understand the principles of forming more complex (anatomical and clinical) terms
- understand and write a clinical diagnosis
- write a medical prescription

O Ō P Q R S T U Ū V X Y Ŷ Z

Consonant/group of consonants	Pronunciation	Example
1: c + a, o, u, consonants c + ae, oe, e, i, y	[k] medical [ts]	c <u>a</u> mera, c <u>o</u> sta, c <u>u</u> ltivatio, c <u>r</u> anium c <u>a</u> ecus, c <u>o</u> eliac <u>a</u> , c <u>e</u> ntrum, c <u>i</u> rculatio, c <u>y</u> nismus
2: ch	[x = Greek chi]	chirurgia, cholera

Consonants II

Consonant/group of consonants	Pronunciation	Example
3: g gu + vowel	[g] ground [gv]	gramma, gastritis lingua, sanguis
4: h	[h] house	herba, haematologia
5: j/i + vowel	[y] yes	iniectio/injectio, maior/major
6: p p + h	[p] present [f] physiology	pneumonia, pulmo phantasia, pharmacia
7: qu+ vowel	[kv]	aqua, quadriceps
8: r r+h	[r] rupture [r]	vertebra, ruptura rheuma, rhinitis

Consonants III

Consonant/group of consonants	Pronunciation	Example
9: s/ss <i>s between two vowels and following after l, r, n</i> <i>s between a vowel and m</i>	[s] some [z] zebra [z] zebra	serum, fossa nasus, incisura, pulsus, inversus, tonsilla, suspensio spasmus
10: t ti ti + vowel s/t/x + ti + vowel t+h	[t] tongue [ty] [tsi] [ty] [t]	trauma, tactus tibia operatio, substantia ostium, mixtio therapia, thermometrum
11: z	[z] zone	zoologia

Read aloud

- cancer, medicamentum, lingua
- thorax, pulsus, contusio
- corpus, exitus, functio
- hemispherium, angulus, fractura
- intestinum, aqua, pharmacon
- oedema, musculus, defectus
- medicus, operatio, infarctus
- homo, bronchus, duodenum
- angina, haemorrhagia, spasmus
- encephalon, bacterium, acne
- migraena, pharynx, dysenteria
- inflammatio, leucaemia, virus
- laparoscopia, typhus, organismus
- therapia, digitus, gingiva
- gangraena, diagnosis, tonsilla
- injectio, lymphata, oxygenium
- vademecum, insufficientia, chirurgia

Grammatical categories of Latin nouns and adjectives

Morphological typology of languages: English vs. Latin

- **analytic / isolating languages**

= rely mainly on word order to convey meaning > contain very little inflection (e.g. Chinese, English – fixed word order = SVOMPT keeps sentences understandable)

- **synthetic languages**

= word order is less important, individual words express their grammatical functions/relations by means of prefixes and suffixes, higher degree of inflection

- agglutinative (e.g. Turkish, Hungarian, Japanese, Finnish)
- **fusional = inflectional** (e.g. Latin, Greek, Czech, Russian, Romance languages)
- polysynthetic (Eskimo languages)

Number and gender

Number

- singular (sg. = 1)
- plural (pl. = 2 and more)

Gender

- masculine (nervus, i, m.)
- feminine (vena, ae, f.)
- neutral (cerebrum, i, n.)

Case

Case expresses the grammatical function of a word in a sentence/phrase.

There are six cases in Latin, but only four of them are used in medical terminology:

- 1. **nominative** (nom.) – expresses subject
- 2. **genitive** (gen.) – expresses possession (“of”)
- 4. **accusative** (accus.) – prepositional case
- 6. **ablative** (abl.) – prepositional case

Case

case	function	use	vocabulary system
nominative	subject of a phrase	ANATOMY corpus ulnae (= body of elbow bone)	1 st part of the dictionary entry
genitive	possessive case = <i>English</i> „of“	ANATOMY caput femoris (= head of thigh bone)	2 nd part of the dictionary entry
accusative	after prepositions	CLINICAL DIAGNOSES post operationem (after operation)	
ablative		sine complicationibus (= without complications)	

Case: English vs. Latin

- **English:** **(fixed) word order** gives the information on the grammatical function of each word in a sentence/phrase

e.g. Teacher gives a book to the student.

(**subject** – **verb** – direct **object** – indirect object)

- **Latin:** **the form of each word** expresses its grammatical function in a sentence/phrase (> loose word order)

e.g. Magister *librum* discipulo *dat*.

Case: English vs. Latin

- **English:** change of the word order > **meaning change**
soft ulcer in duodenum x ~~ulcer in soft~~ duodenum
 - the grammatical function of a word is conveyed by **WORD ORDER**
(Subject-Verb-Object rule)
- **Latin:** change of the word order > **nothing happens**
soft ulcer of/in duodenum:
ulcus molle duodeni = *ulcus duodeni molle*
 - the grammatical function of a word is conveyed by its **ENDING!!!**

Case: example

status post implantationem osteoprotheseos coxae sine complicationibus

↑
NOMINATIVE
= state/condition

↑
ACCUSATIVE
= after implantation

↔
GENITIVE
= of osteoprothesis
= of hip joint

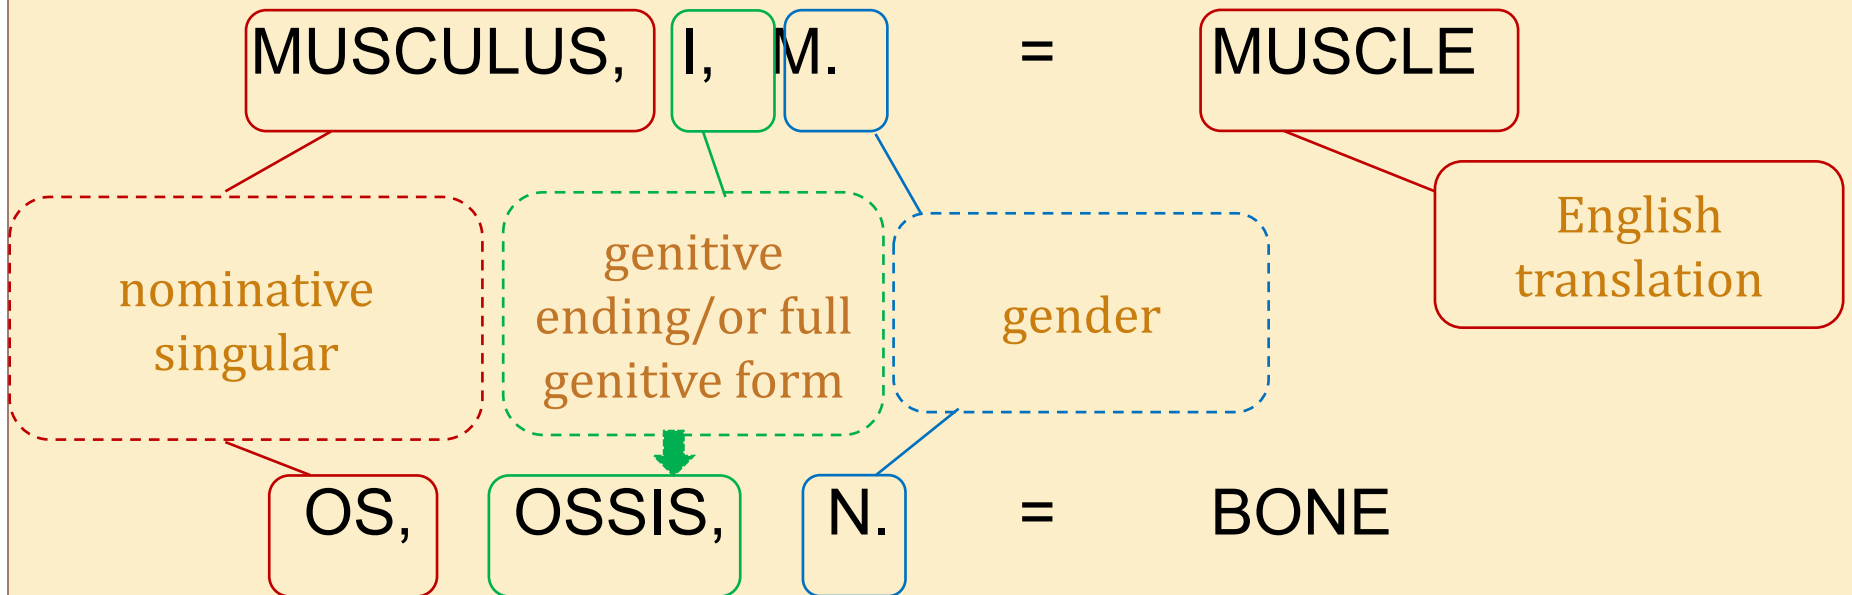

↑
ABLATIVE
= without complications

= state after the implantation of osteoprothesis of hip joint without complications

How does a dictionary entry look like?

- English: one single form of a noun is given
- Latin: a noun is presented in the following way

ALL these pieces of information are EQUALLY important and should be learned by heart!!!

Latin declensions

- declensions are groups of nouns (+ adjectives) declined in the same way (i.e. they share one and the same set of case endings)
- there are 5 declensions in Latin
- the declension of a noun can be identified on the basis of the **genitive singular ending**

DECLENSION	1 st	2 nd	3 rd	4 th	5 th
GENITIVE ENDING	-ae (-es)	-i	-(?)-is	-us	-ei
EXAMPLE	coxa, ae, f.	humerus, i, m. cranium, ii, n.	coccyx, gis, f. dens, dentis, m. femur, oris, n. pelvis, is, f.	arcus, us, m. genu, us, n.	facies, ei, f.

Latin declensions

Nouns are divided into 5 declensions on the basis of their **stem sound** (see gen. pl.):

- 1st declension – **a-stems** – ven-**a**-rum
- 2nd declension – **o-stems** – nerv-**o**-rum
- 3rd declension
 - **i-stems** – pelv-**i**-um
 - **consonant stems** – dolo-**r**-um, pon-**t**-um, sectio-**n**-um
- 4th declension – **u-stems** – duct-**u**-um
- 5th declension – **e-stems** – faci-**e**-rum

How to decline a Latin noun?

1. find the **right declension paradigm**
(on the basis of gen. sg. + gender)
2. find the **stem** of the noun
= part of the word, which remains after the
removal of the ending of genitive singular
3. attach individual **case endings** to the **stem**

ven-a

Adjectives

= words that describe nouns

Noun-adjective agreement in Latin

= a Latin adjective always corresponds with the respective noun in gender, number and case!!!!

Noun + adjective = agreed attribute

Examples: fractura ulnae dextrae complicata
vertebrae thoracicae
ad lagoenam fuscam
cum anaemia pernicioosa

Why do you think this is so?

Prepositions

= words that express relations (spacial, temporal etc.) between nouns

with **ACCUSATIVE**

- **in** (direction) = towards, into – in venam
- **sub** (direction) = under – sub tibiam
- **ad** = towards, to – ad cranium
- **ante** / **post** = before / after – ante / post operationem
- **extra** / **intra** = outside / inside of – extra / intra pulmones
- **contra** = against – contra tussim
- **per** = through – per rectum
- **prope** (motion) = near to – prope ulnam
- **propter** = because of – propter anaemiam
- **circum** = around – circum oculum
- **inter** = between – inter costas
- **secundum** = according to – secundum Geppert

with **ABLATIVE**

- in** (location) = inside – in vena
- sub** (location) = under – sub tibia
- e/ex** = out of – e scatula
- a/ab** = from, by – a medico
- sine** = without – sine insufficientia
- cum** = with – cum digito medio
- pro** = for the sake of – pro adulto
