HIV/AIDS surveillance in Europe 2019

data 2018

Figure 1.1: Male-to-female ratio In new HIV diagnoses, by country, EU/EEA, 2018 (n=26164)

No female cases were diagnosed in Liechtenstein in 2018

Figure 1.2: Age- and gender-specific rates of new HIV diagnoses per 100 000 population, EU/EEA, 2018 (n = 26 031)

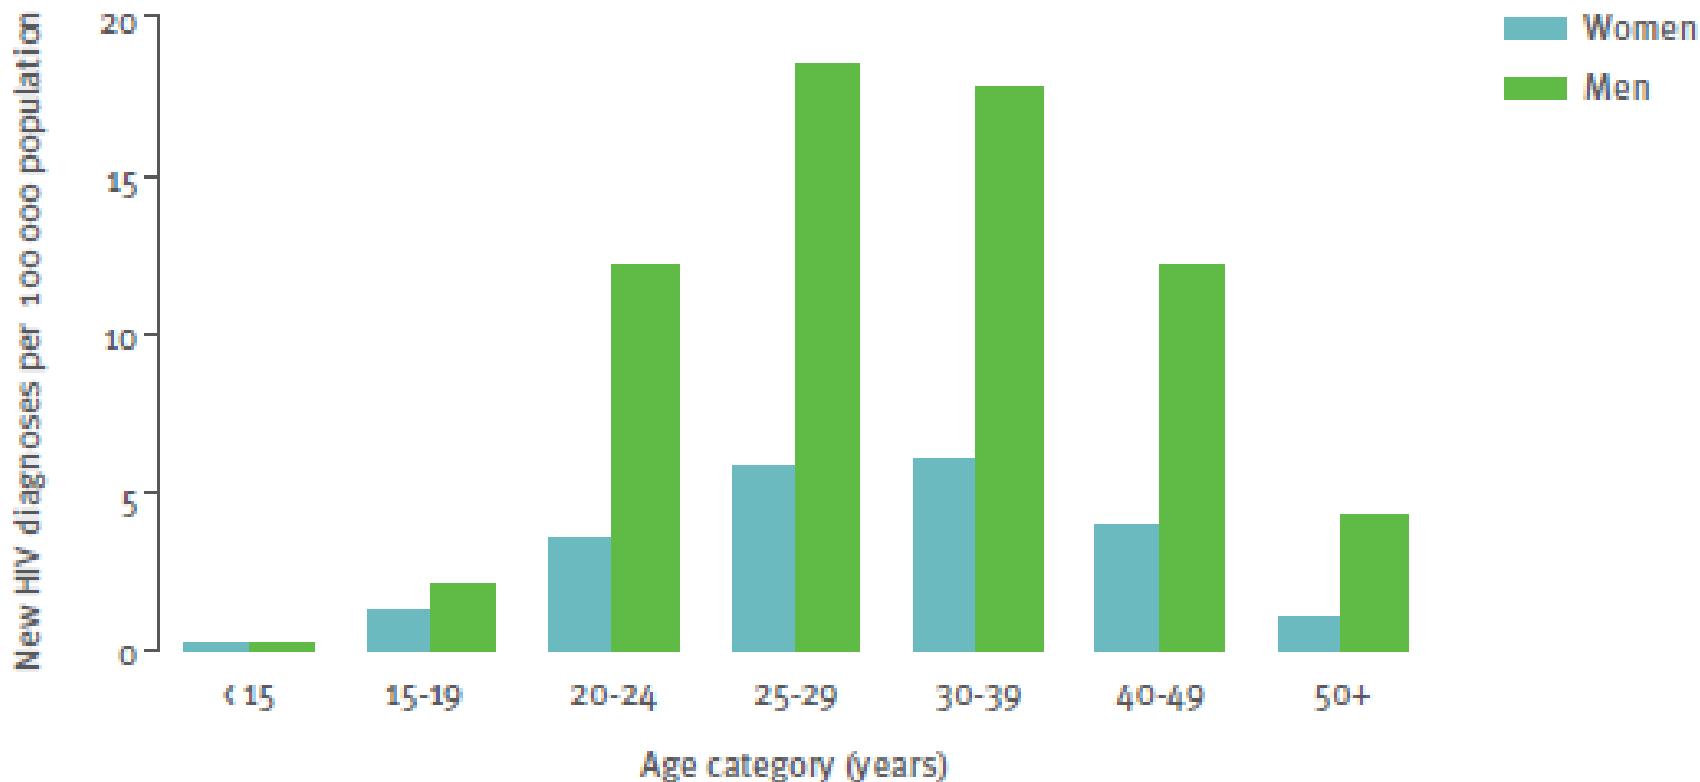

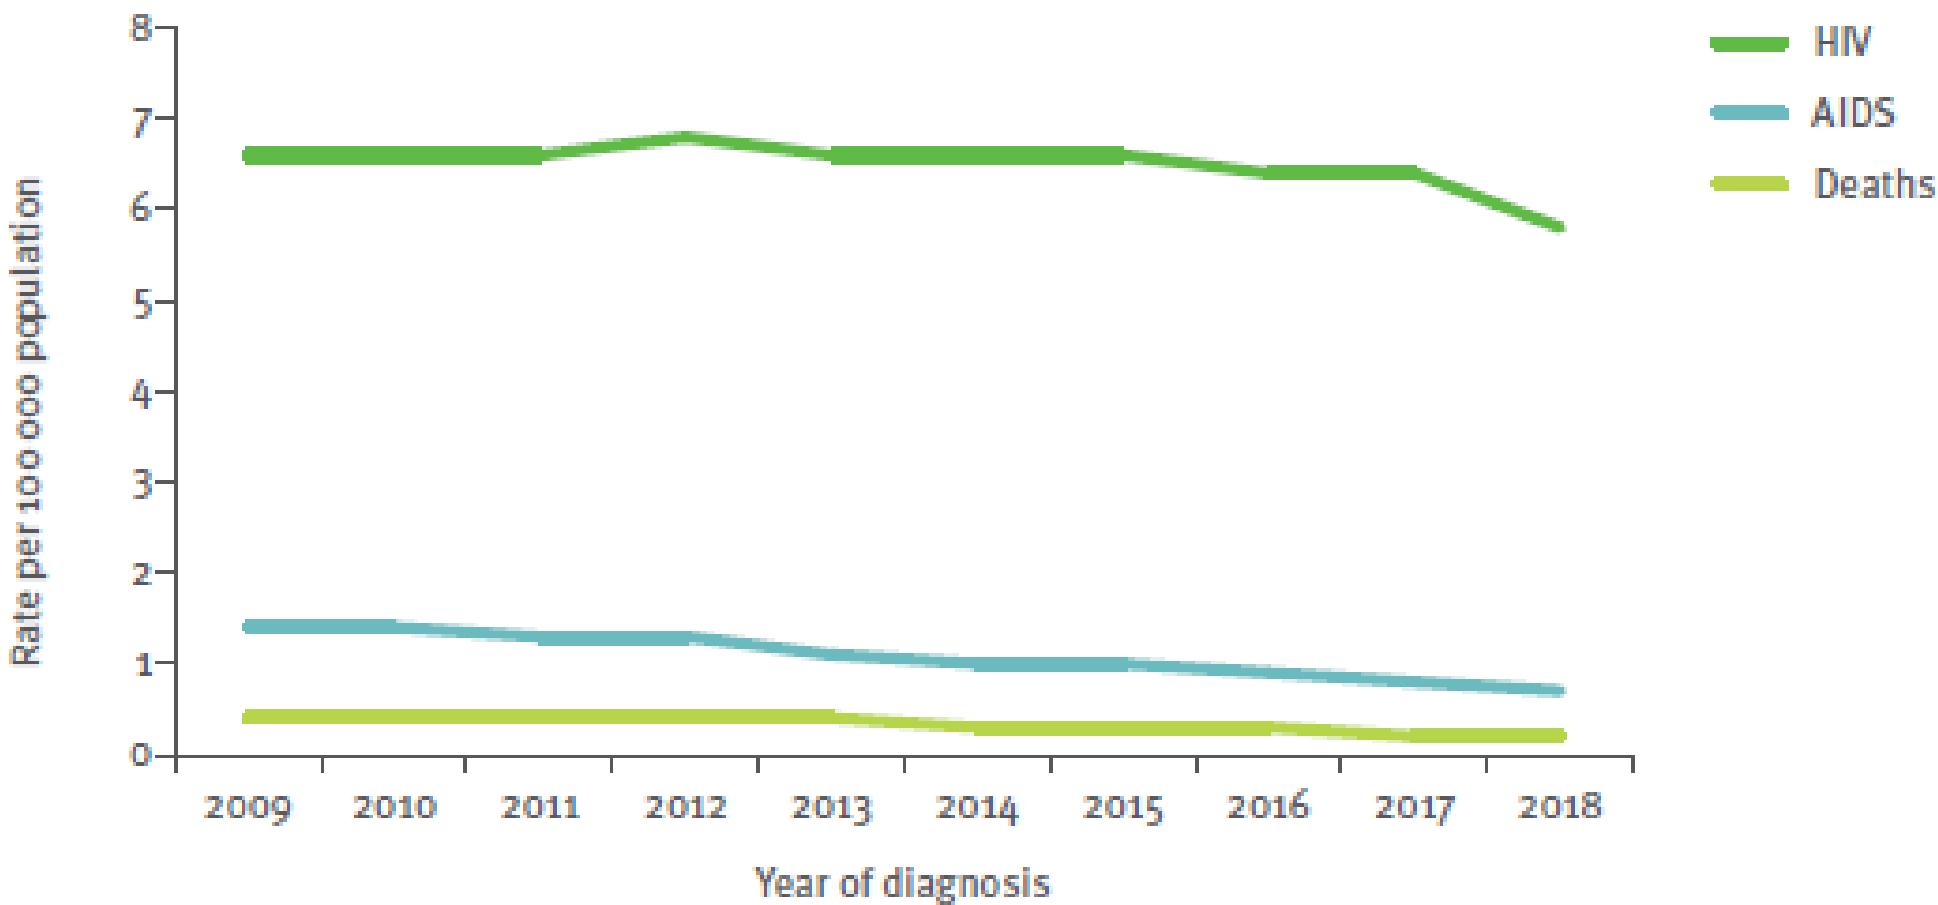

Figure 1.10: People diagnosed with HIV, AIDS and deaths reported per 100 000 population, EU/EEA, 2009–2018

Note: Rates exclude countries not reporting consistently over the period: Sweden (AIDS and AIDS-deaths), Italy and Denmark (AIDS deaths)

Figure 1.13a: HIV diagnoses, by year of diagnosis and transmission mode, EU/EEA, 2009–2018

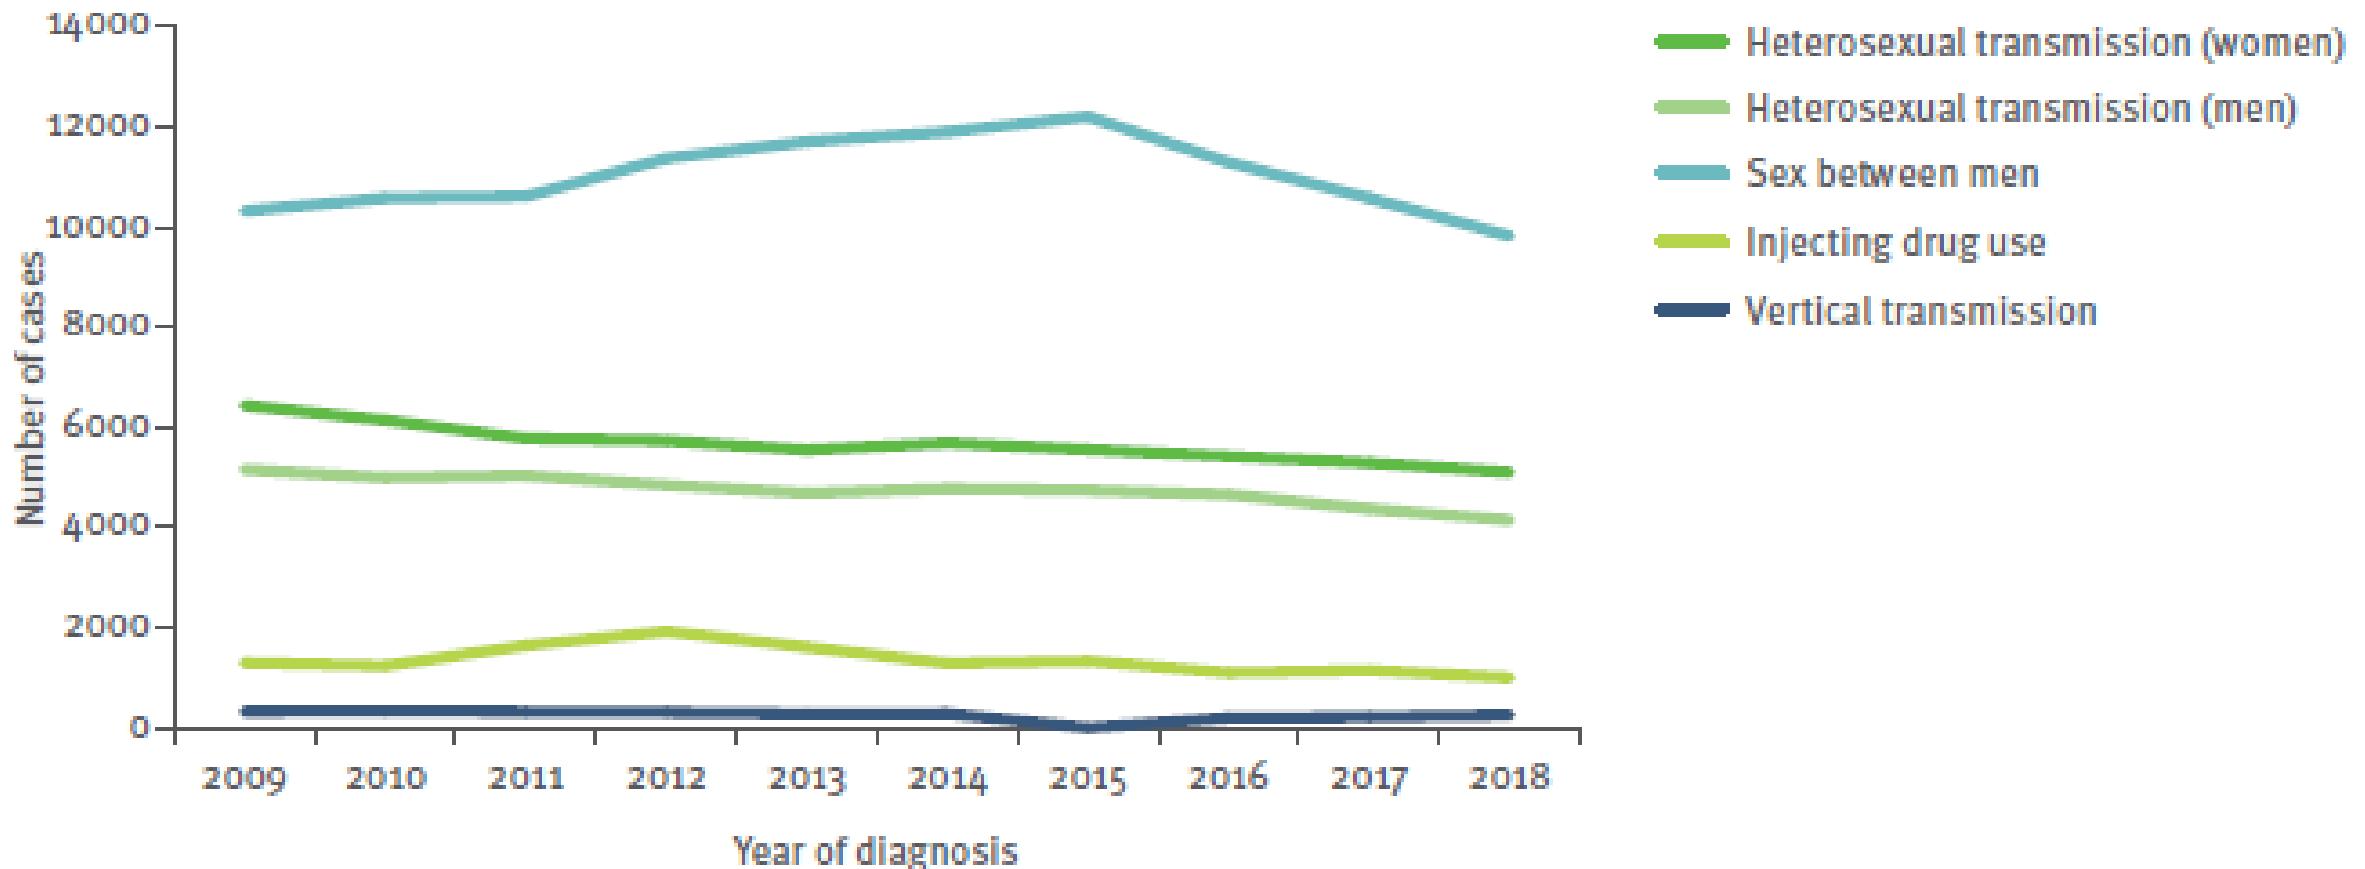

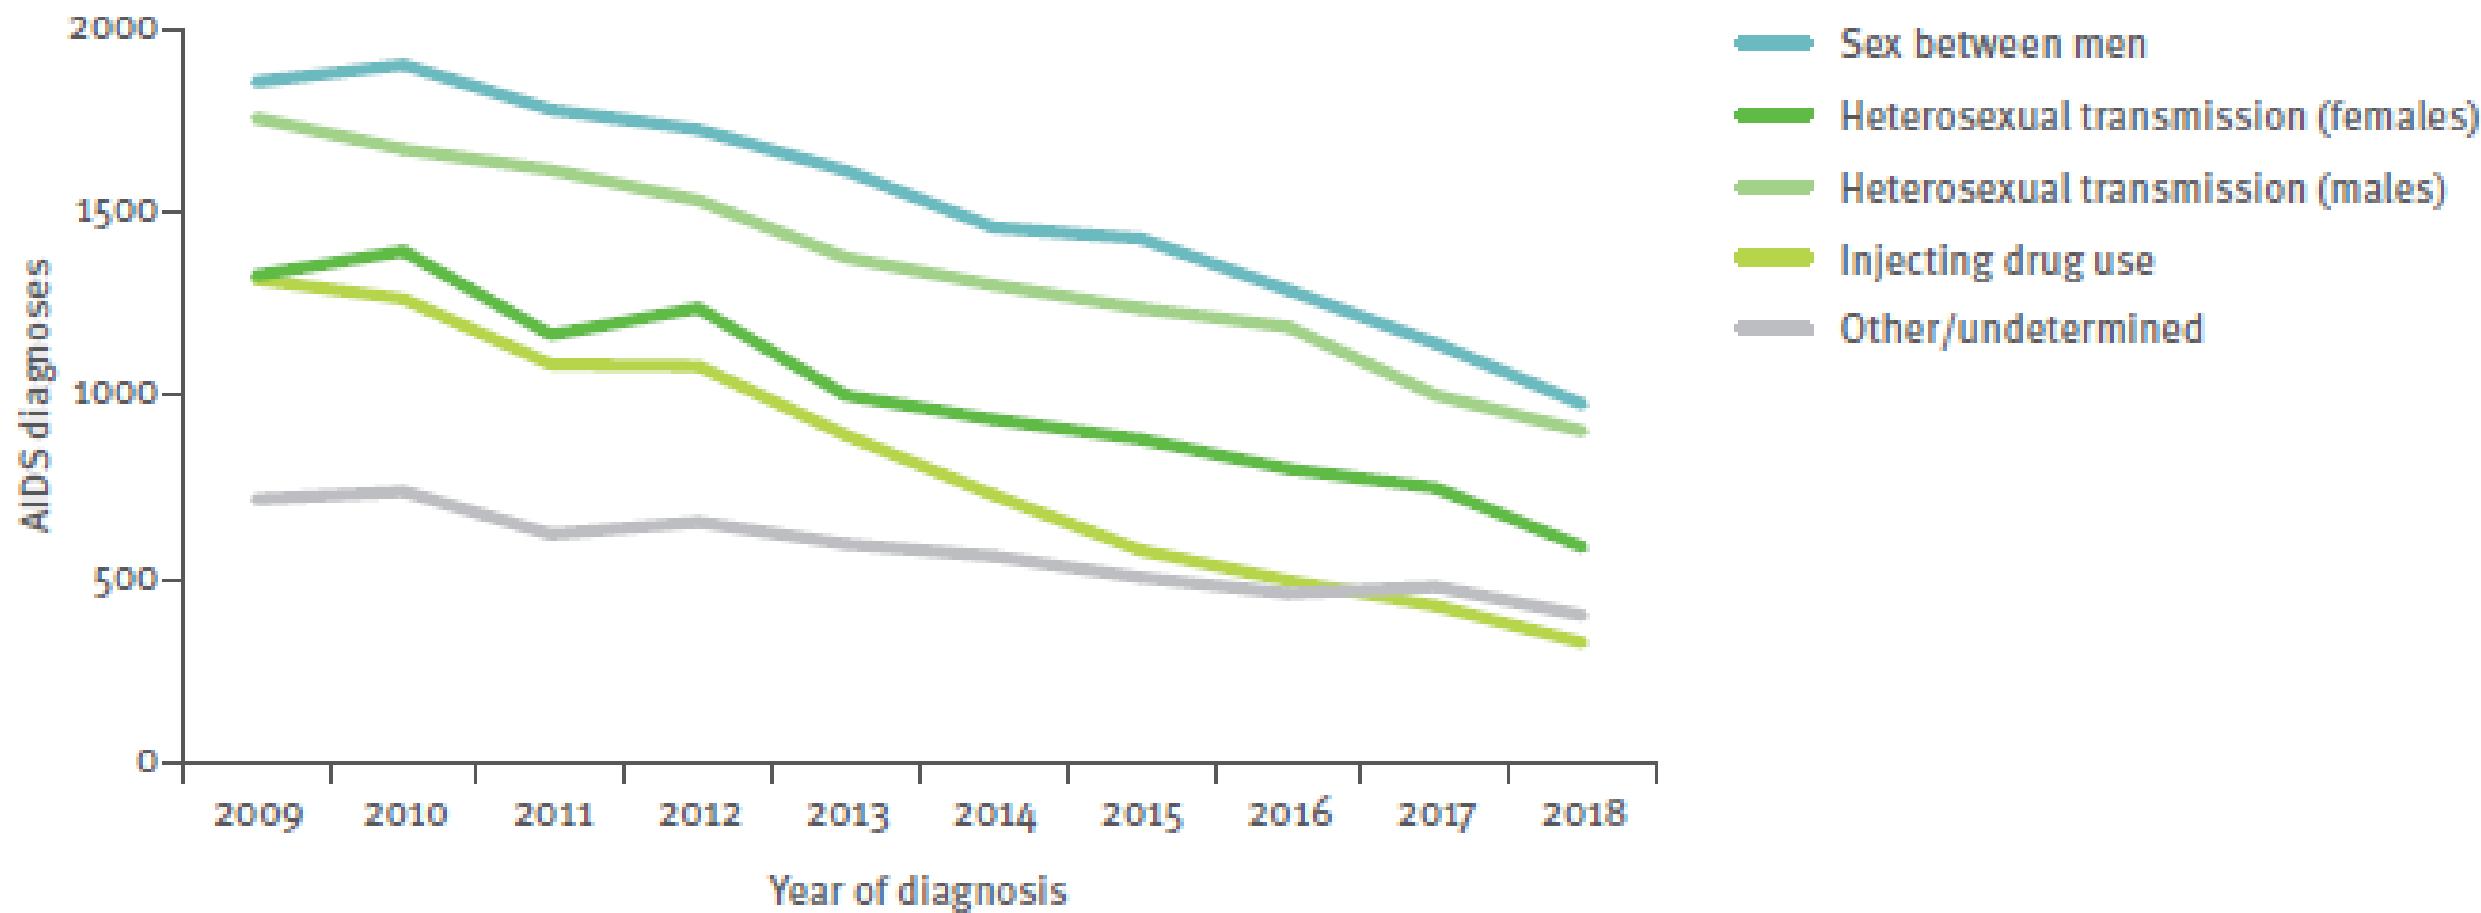

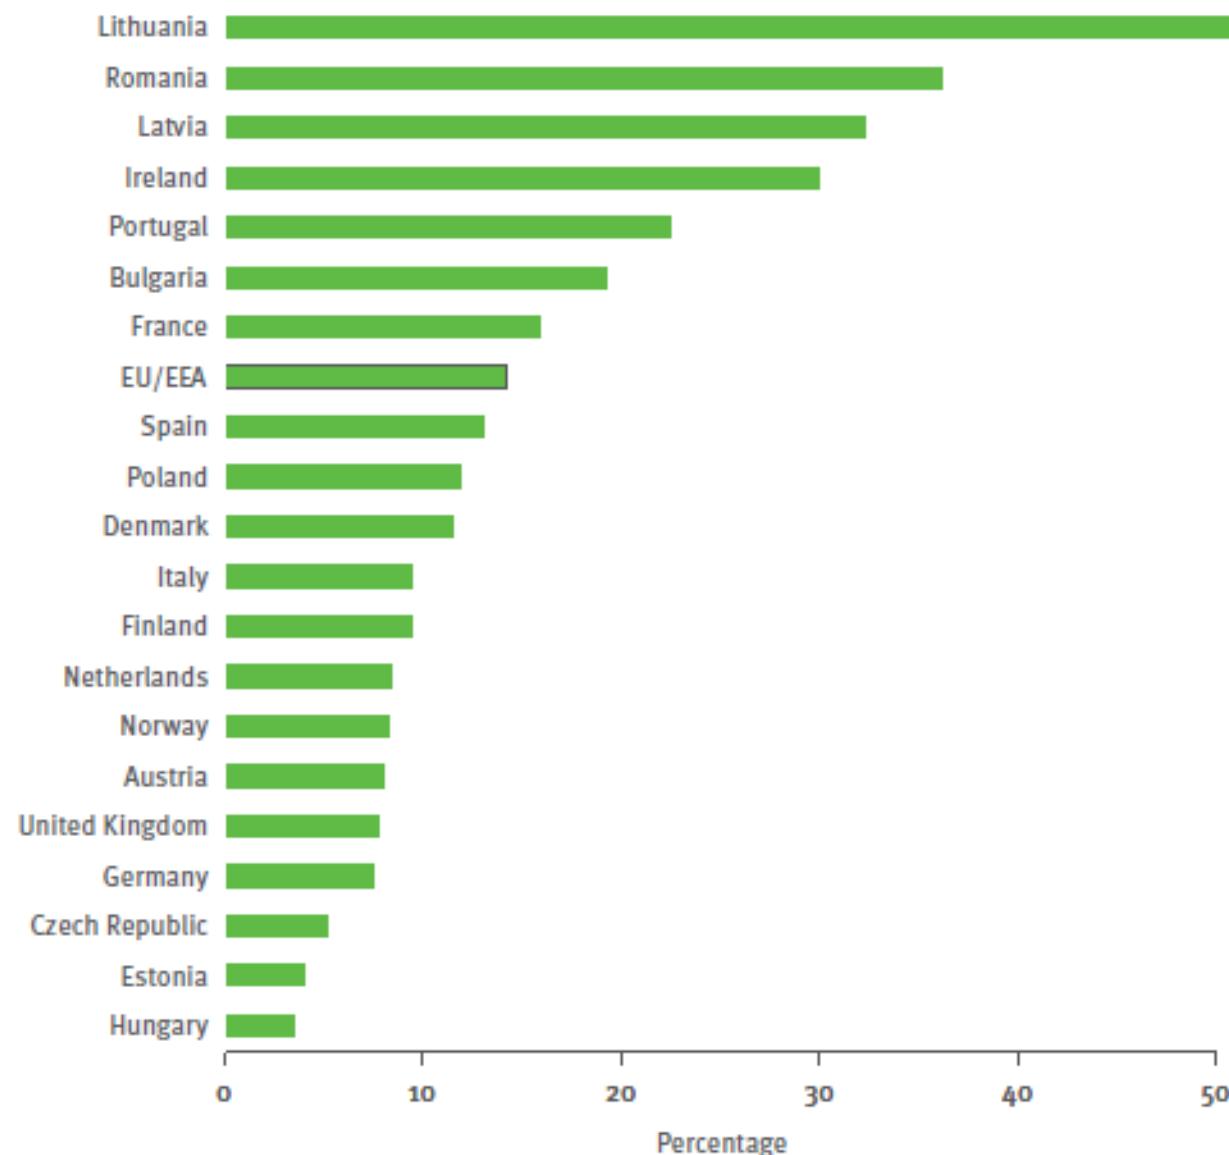

Figure 1.17: AIDS diagnoses, by transmission mode, EU/EEA, 2009–2018

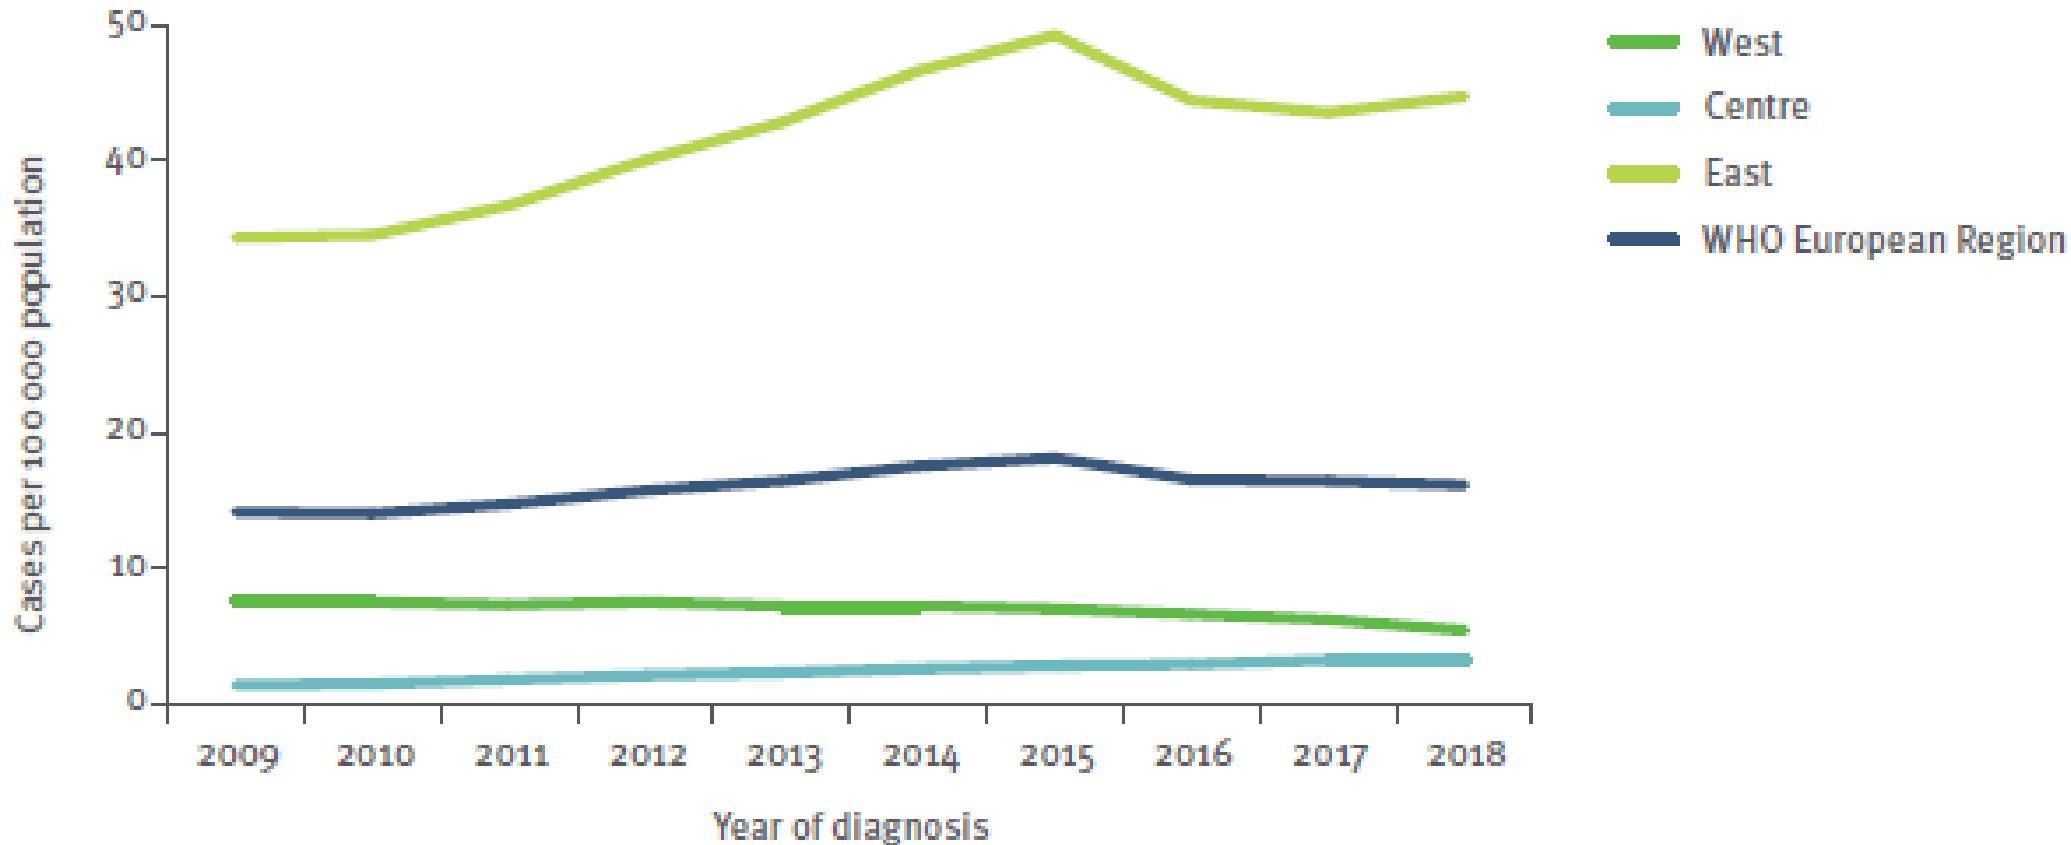

Data from Sweden and Belgium excluded due to inconsistent reporting during the period

Figure 1.18: Proportion of persons diagnosed with AIDS with tuberculosis as an AIDS-defining illness, EU/EEA, 2017 (n=2825)

Countries that did not report AIDS (Sweden) or reported no cases of TB as an AIDS-defining illness (Belgium, Croatia, Cyprus, Greece, Iceland, Luxembourg, Slovakia, Slovenia and Sweden) are excluded.

Figure 2.2: New HIV diagnoses per 100 000 population, by year of diagnosis, WHO European Region, 2009–2018

Includes data from 50 countries. Data from Tajikistan, Turkmenistan and Uzbekistan excluded due to inconsistent reporting over the decade.

Fig. A. Rate of new HIV diagnoses per 100 000 population, by year of diagnosis and adjusted for reporting delay, in the EU/EEA and WHO European Region, 1985–2017

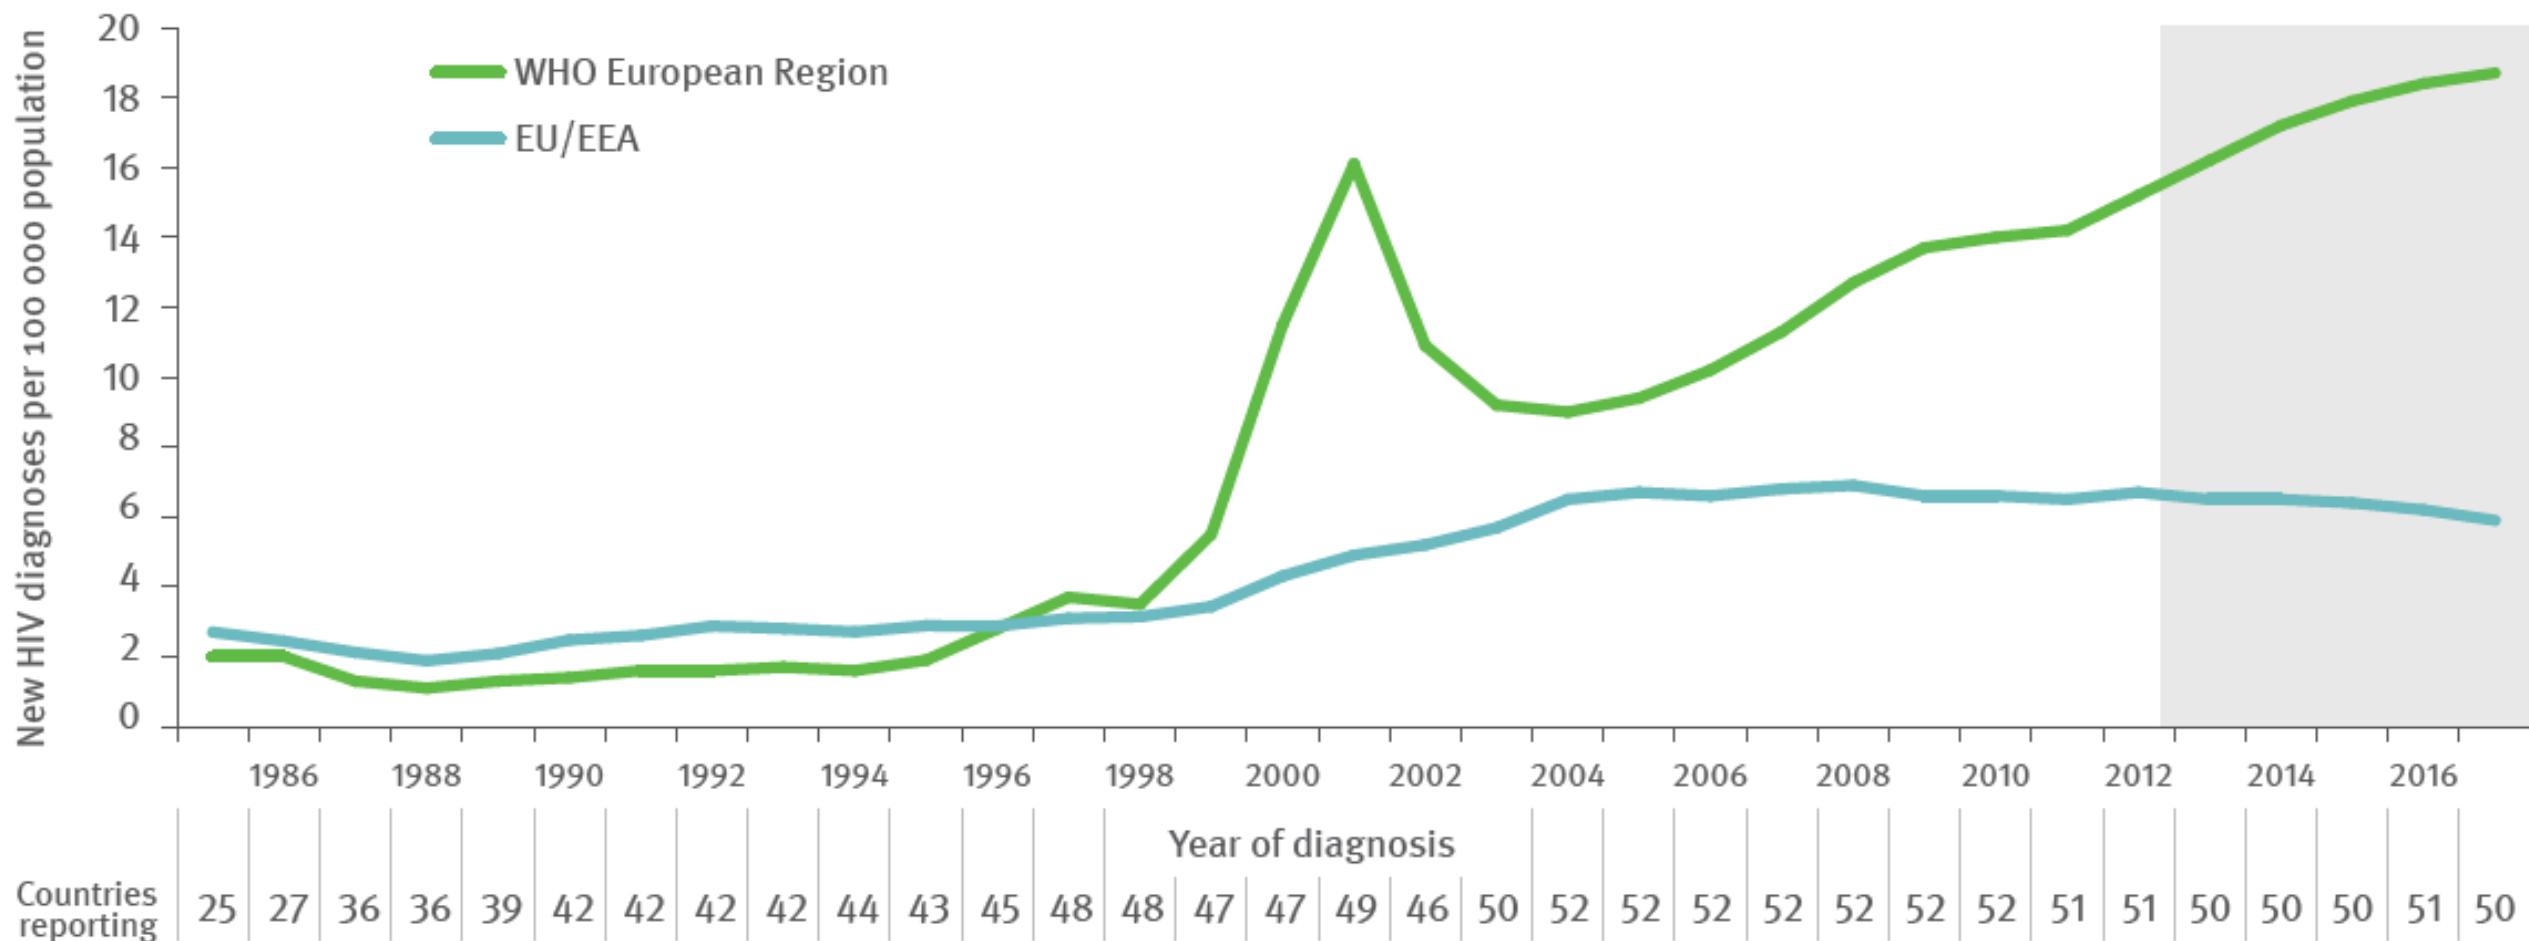

Fig. B. Cumulative number of new HIV diagnoses in the EU/EEA and other countries of the WHO European Region, 1984–2017

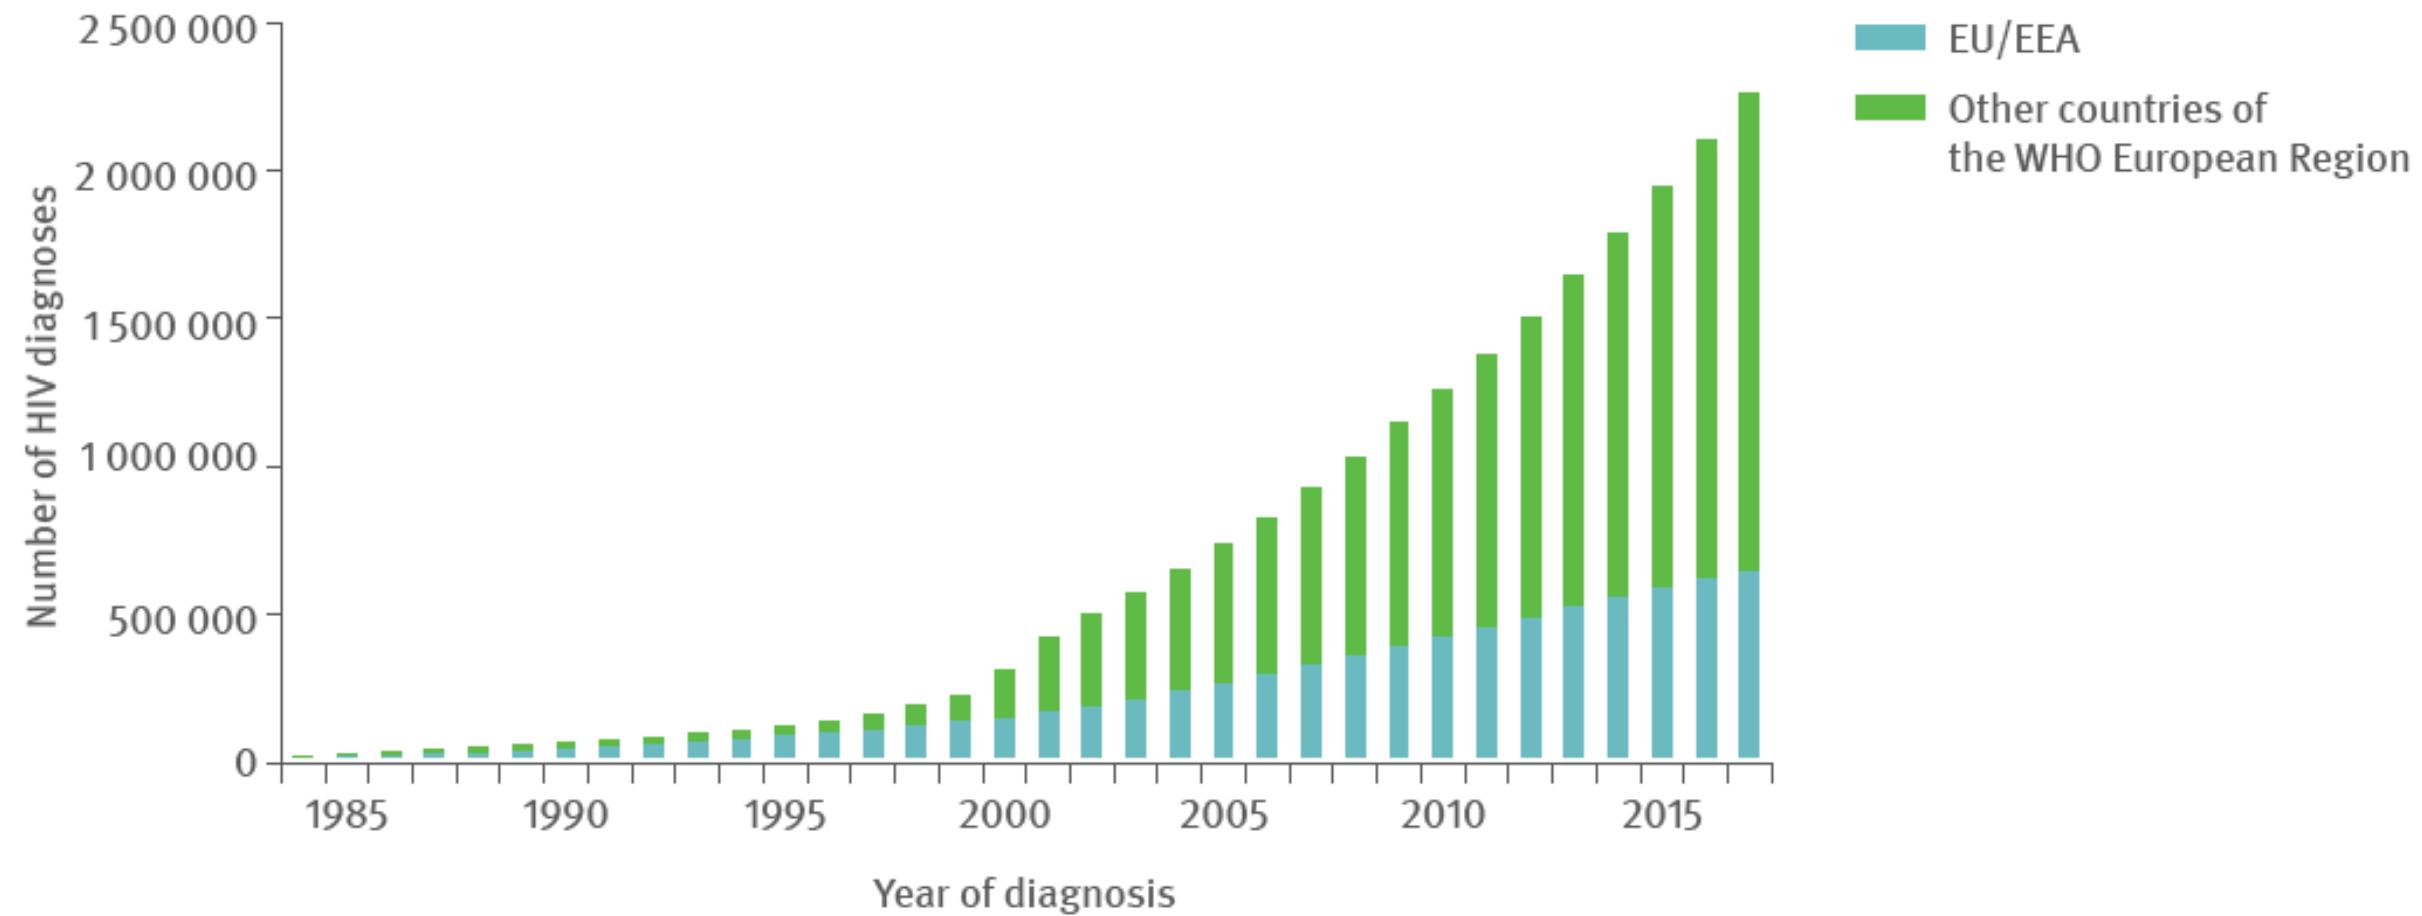

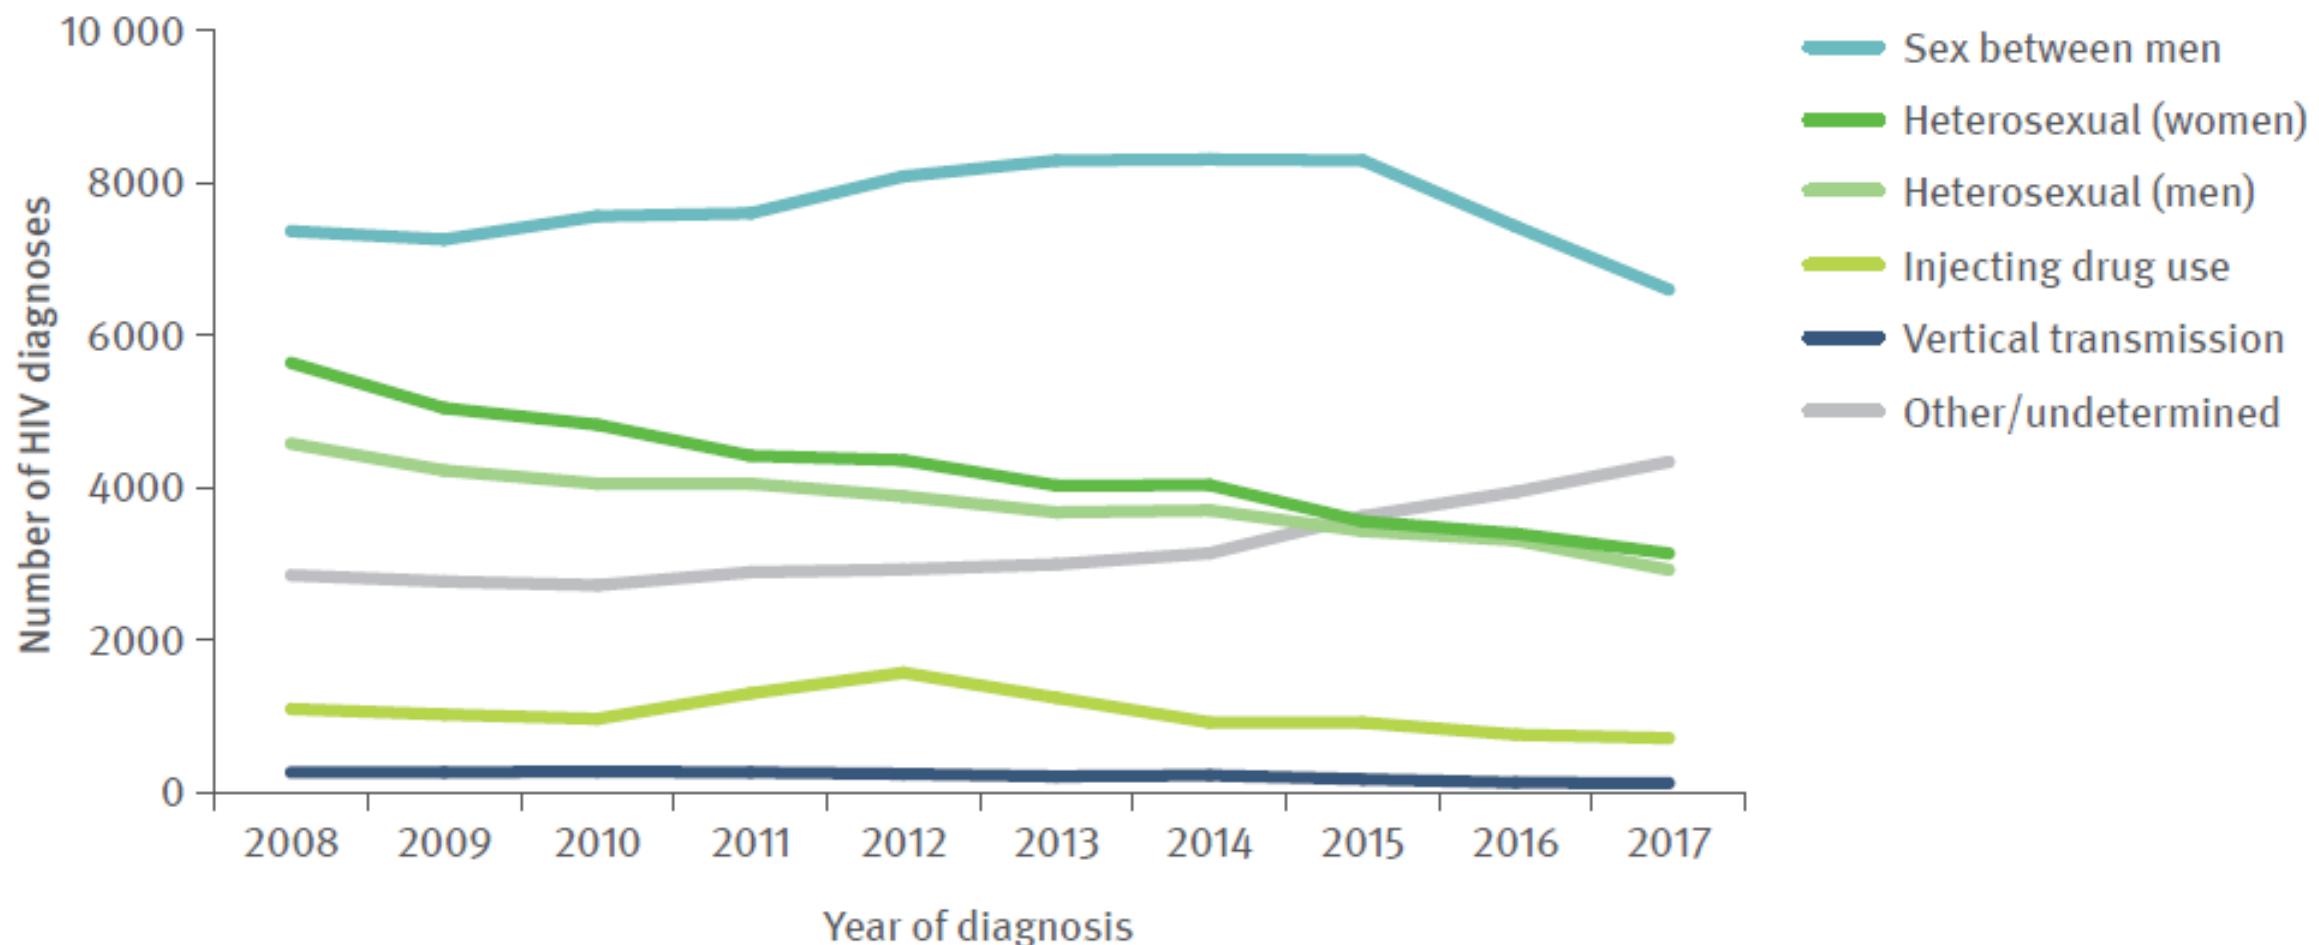

Fig. 1.11a. HIV diagnoses, by year of diagnosis and transmission mode, adjusted for reporting delay, EU/EEA, 2008–2017

HIV in the United States and Dependent Areas

HIV in the United States and Dependent Areas

OF THE 38,739 NEW HIV DIAGNOSES IN THE US AND DEPENDENT AREAS IN 2017:*

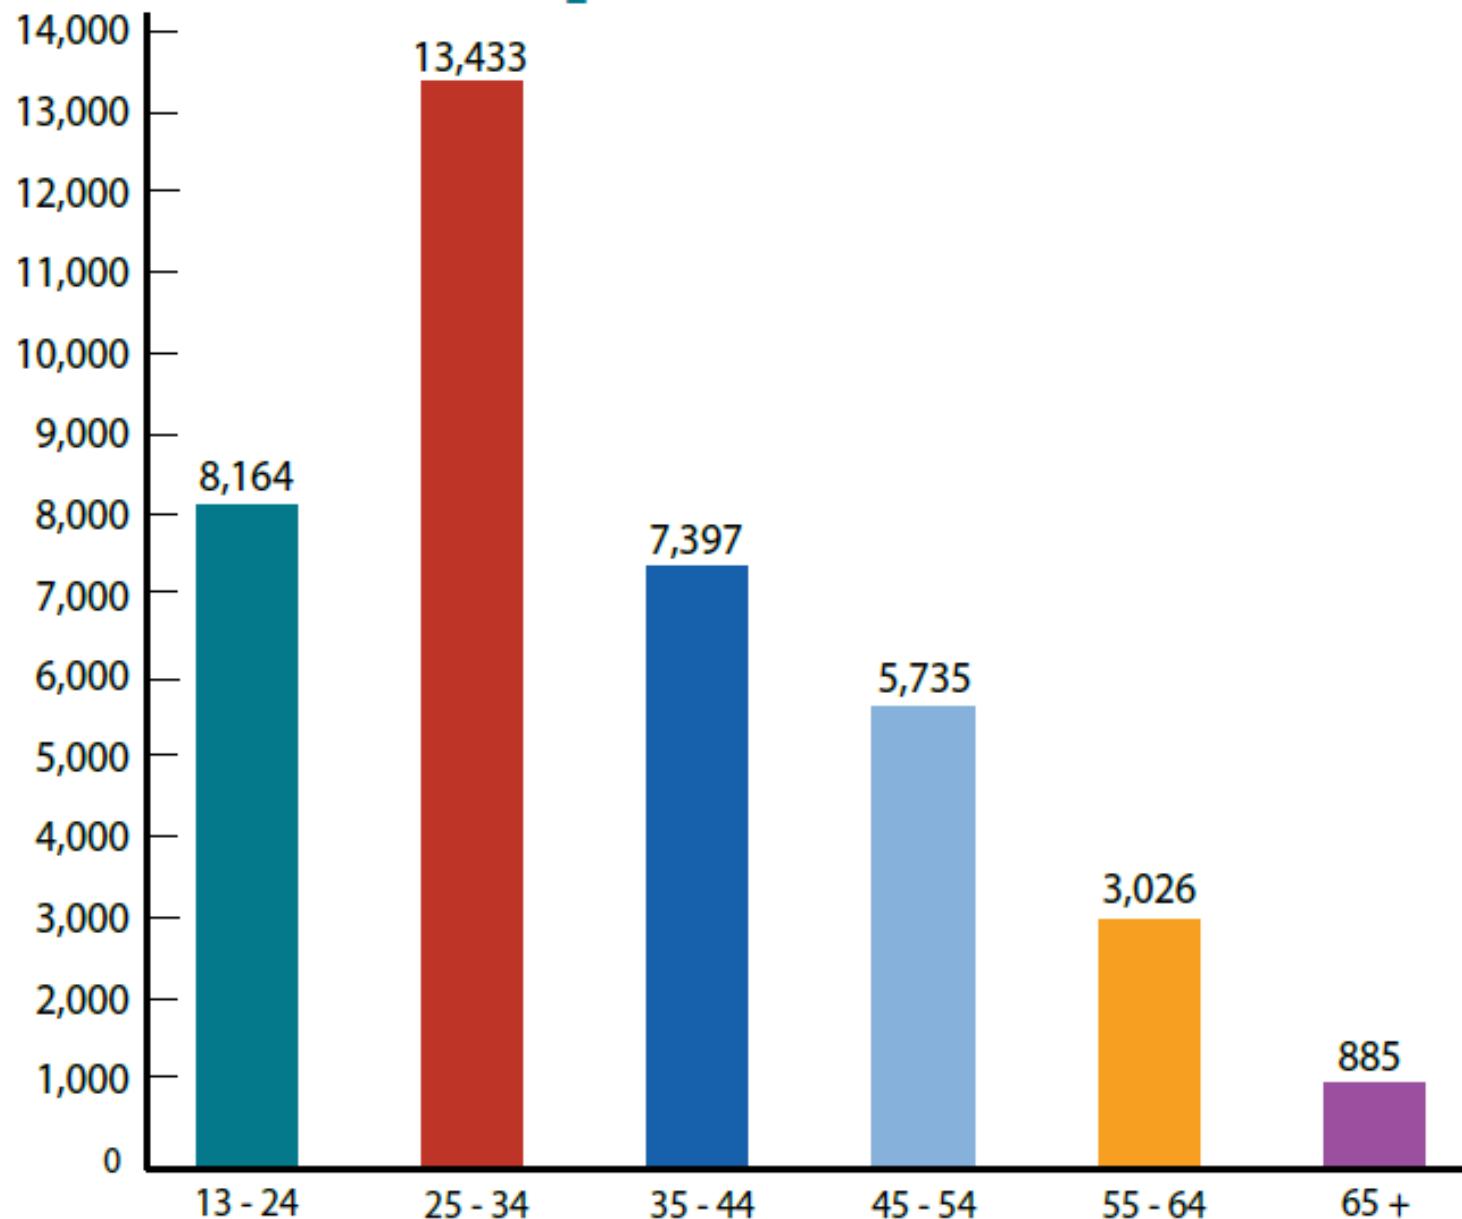

25,748 (66%) WERE AMONG GAY AND BISEXUAL MEN^{**}

9,170 (24%) WERE AMONG HETEROSEXUALS^{**}

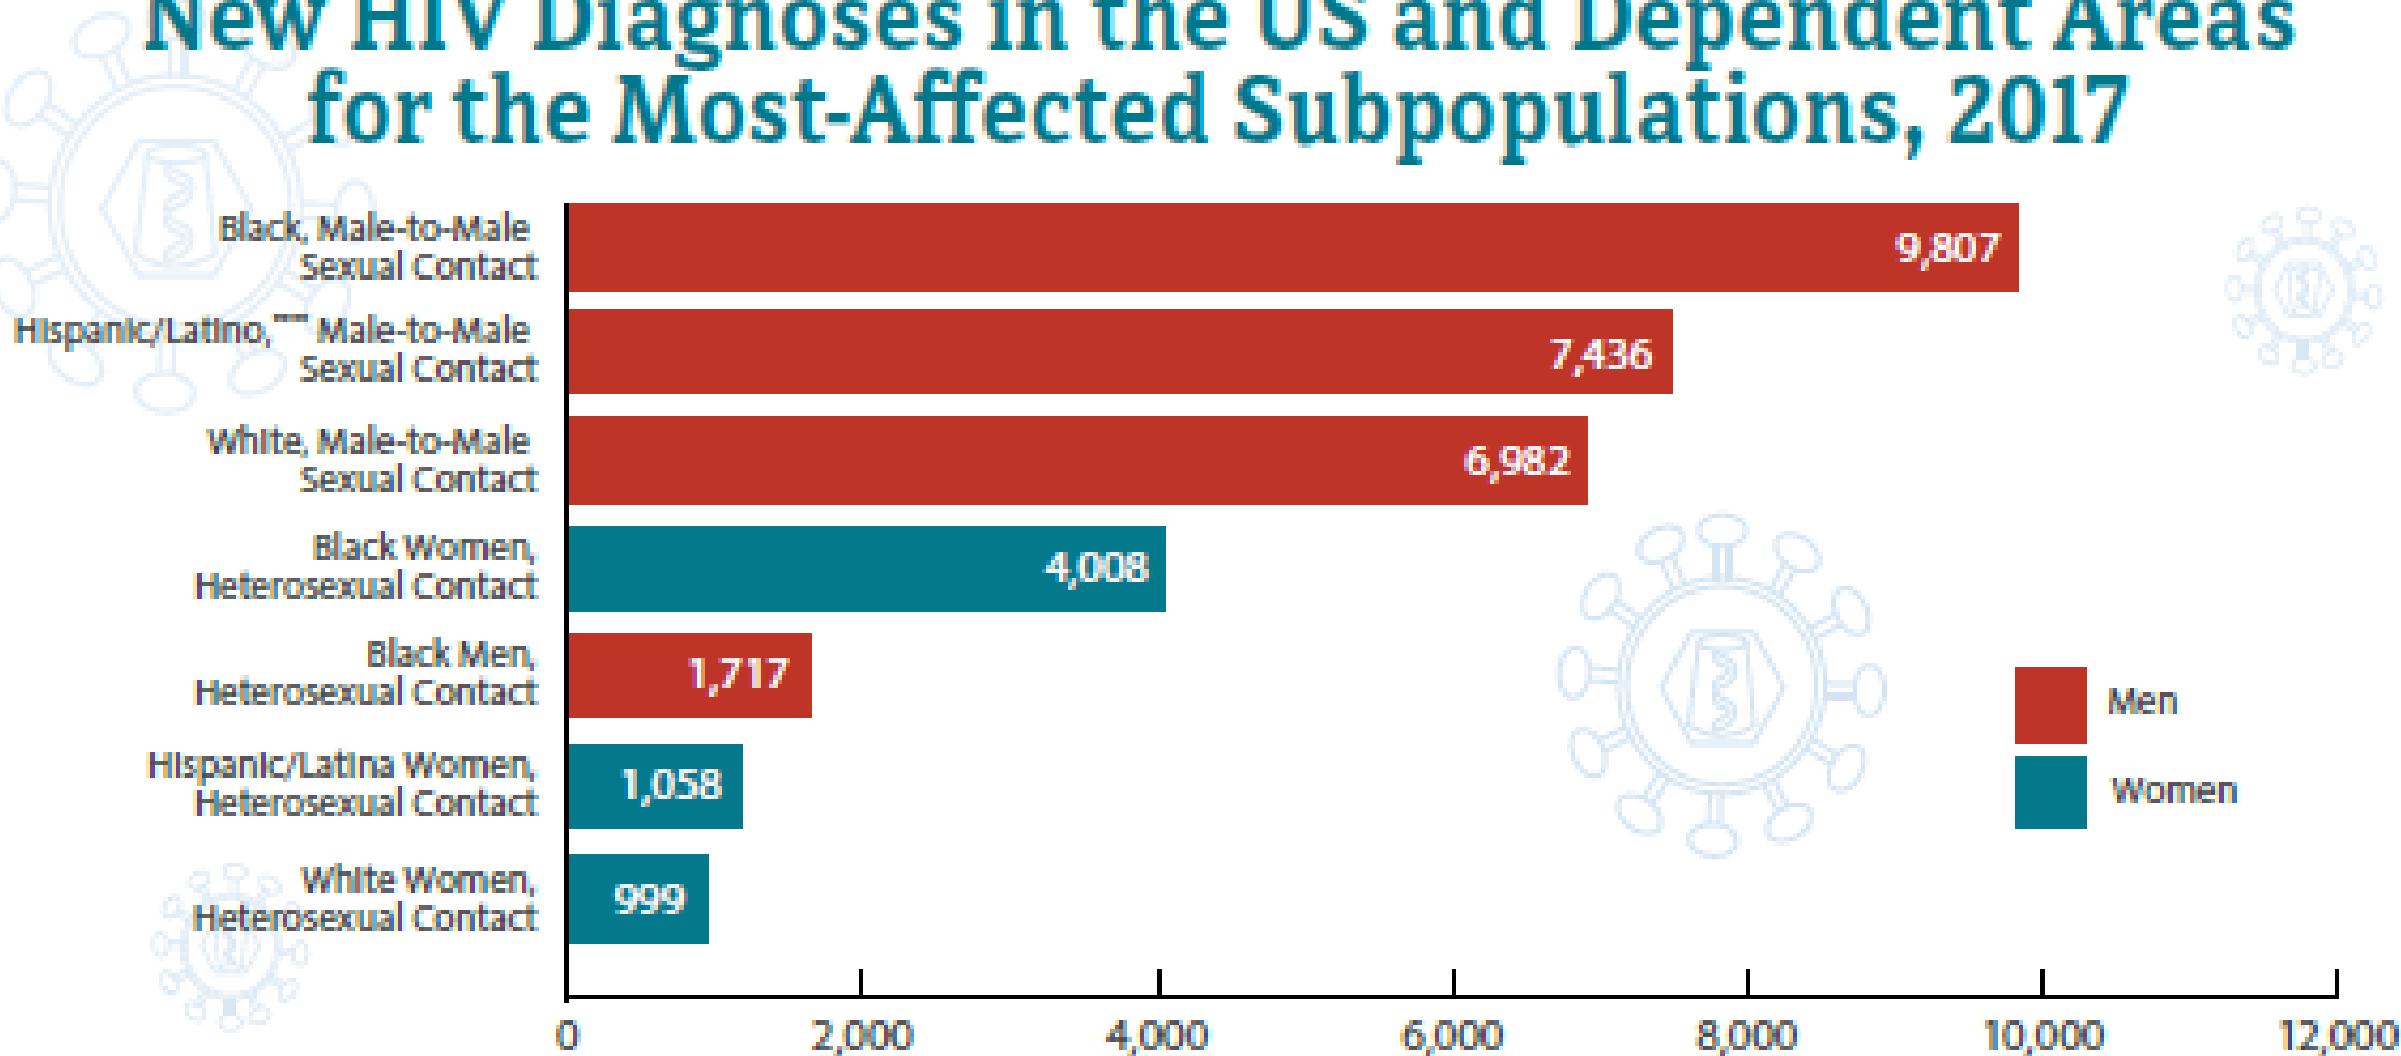

2,389 (6%) WERE AMONG PEOPLE WHO INJECT DRUGS (PWID)^{**}

1,252 (3%) WERE AMONG GAY AND BISEXUAL MEN WHO INJECT DRUGS

New HIV Diagnoses by Age in the US and Dependent Areas, 2017

New HIV Diagnoses in the US and Dependent Areas for the Most-Affected Subpopulations, 2017

People with HIV need to know their HIV status so they can take medicine to treat HIV. Taking HIV medicine as prescribed can make the level of virus in their body very low (called viral suppression) or even undetectable.

A person with HIV who gets and stays virally suppressed or undetectable can stay healthy and has effectively no risk of transmitting HIV to HIV-negative partners through sex.

FOR EVERY 100 PEOPLE
LIVING WITH HIV IN 2015:¹
