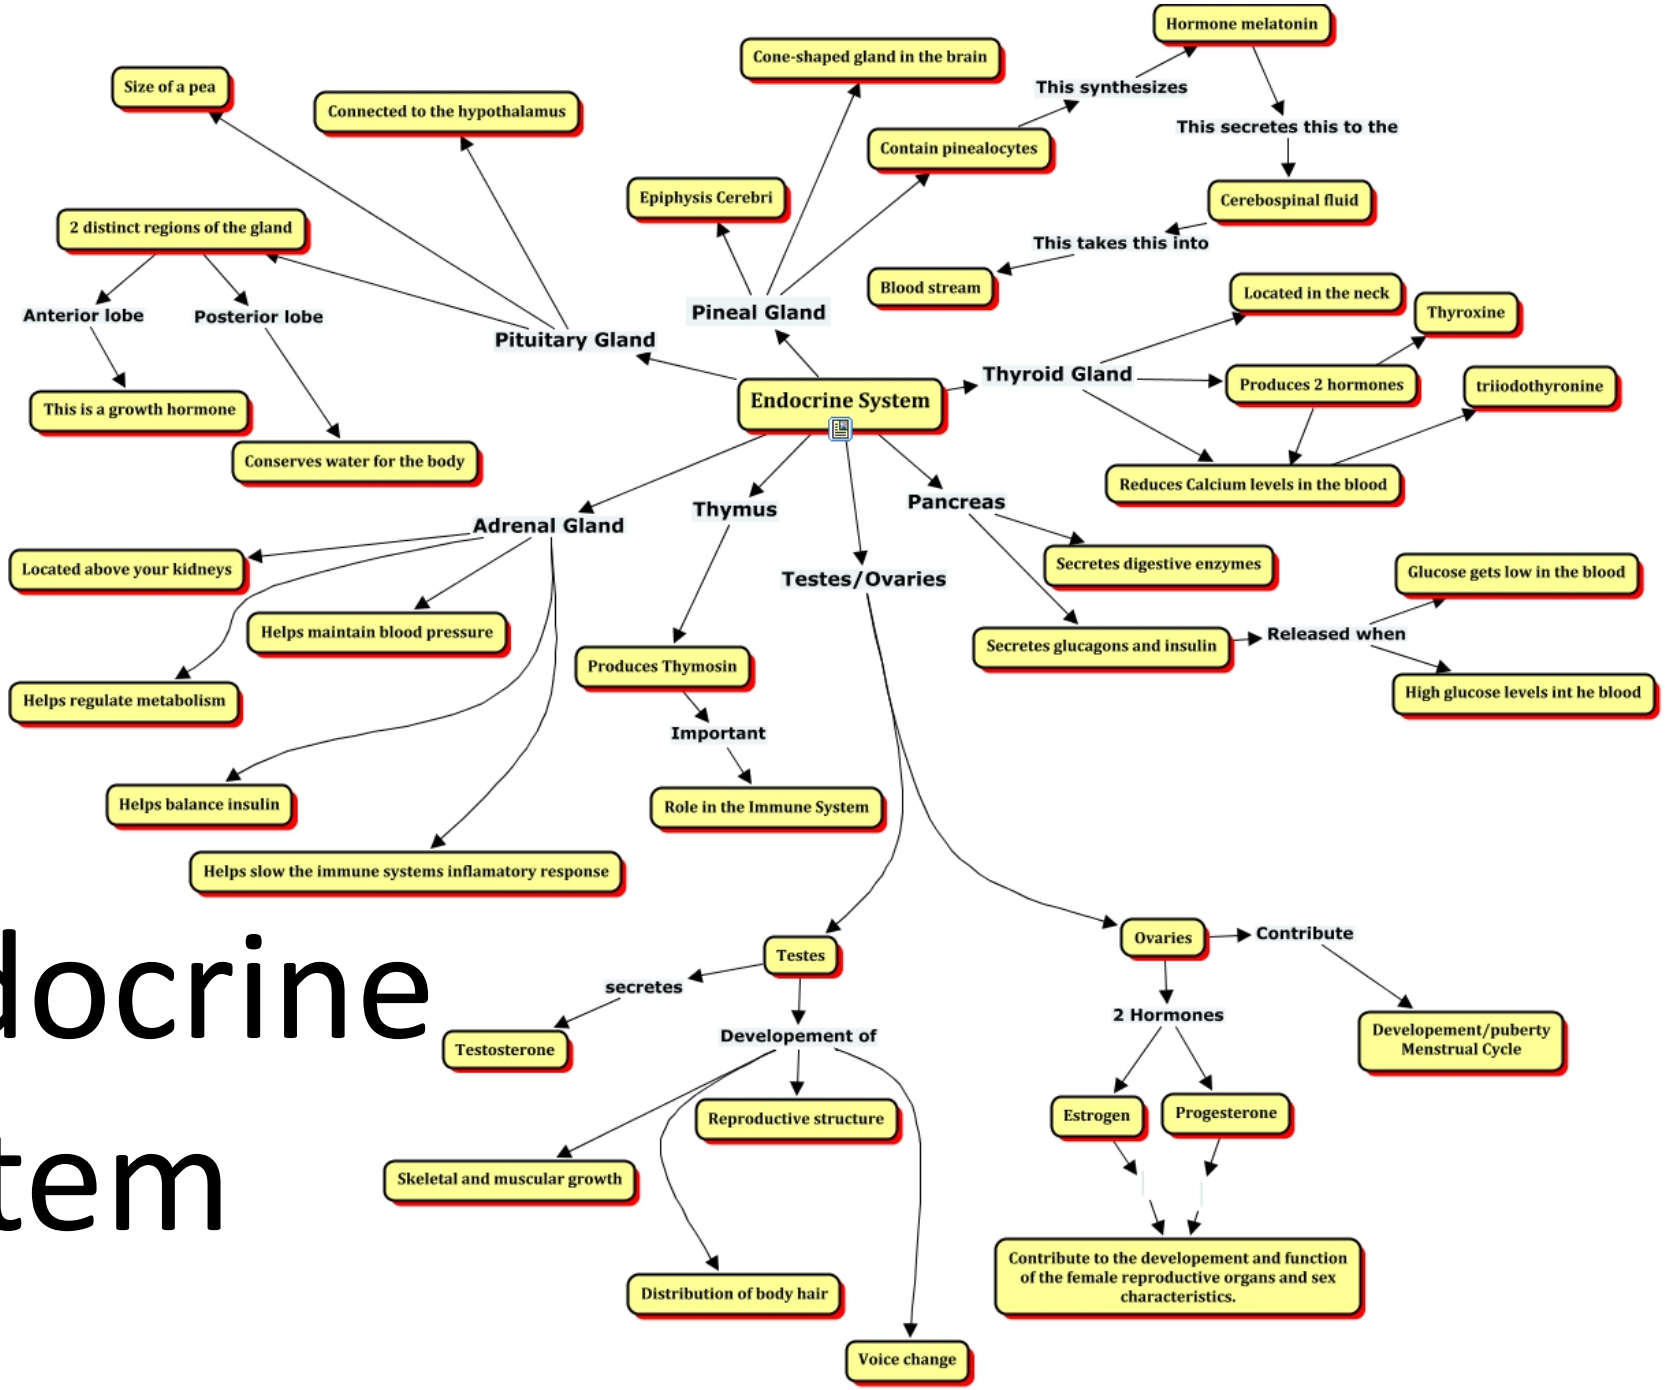
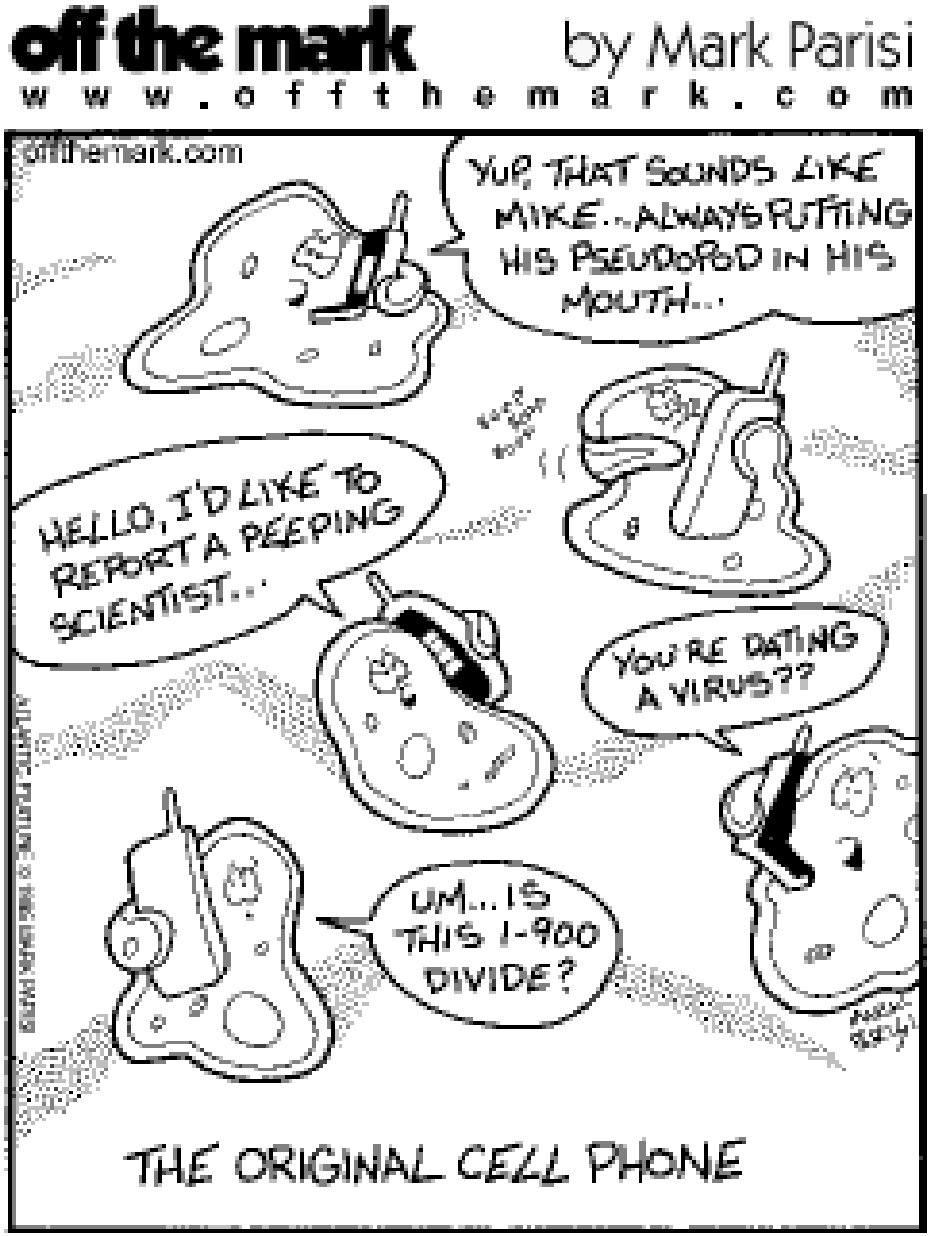
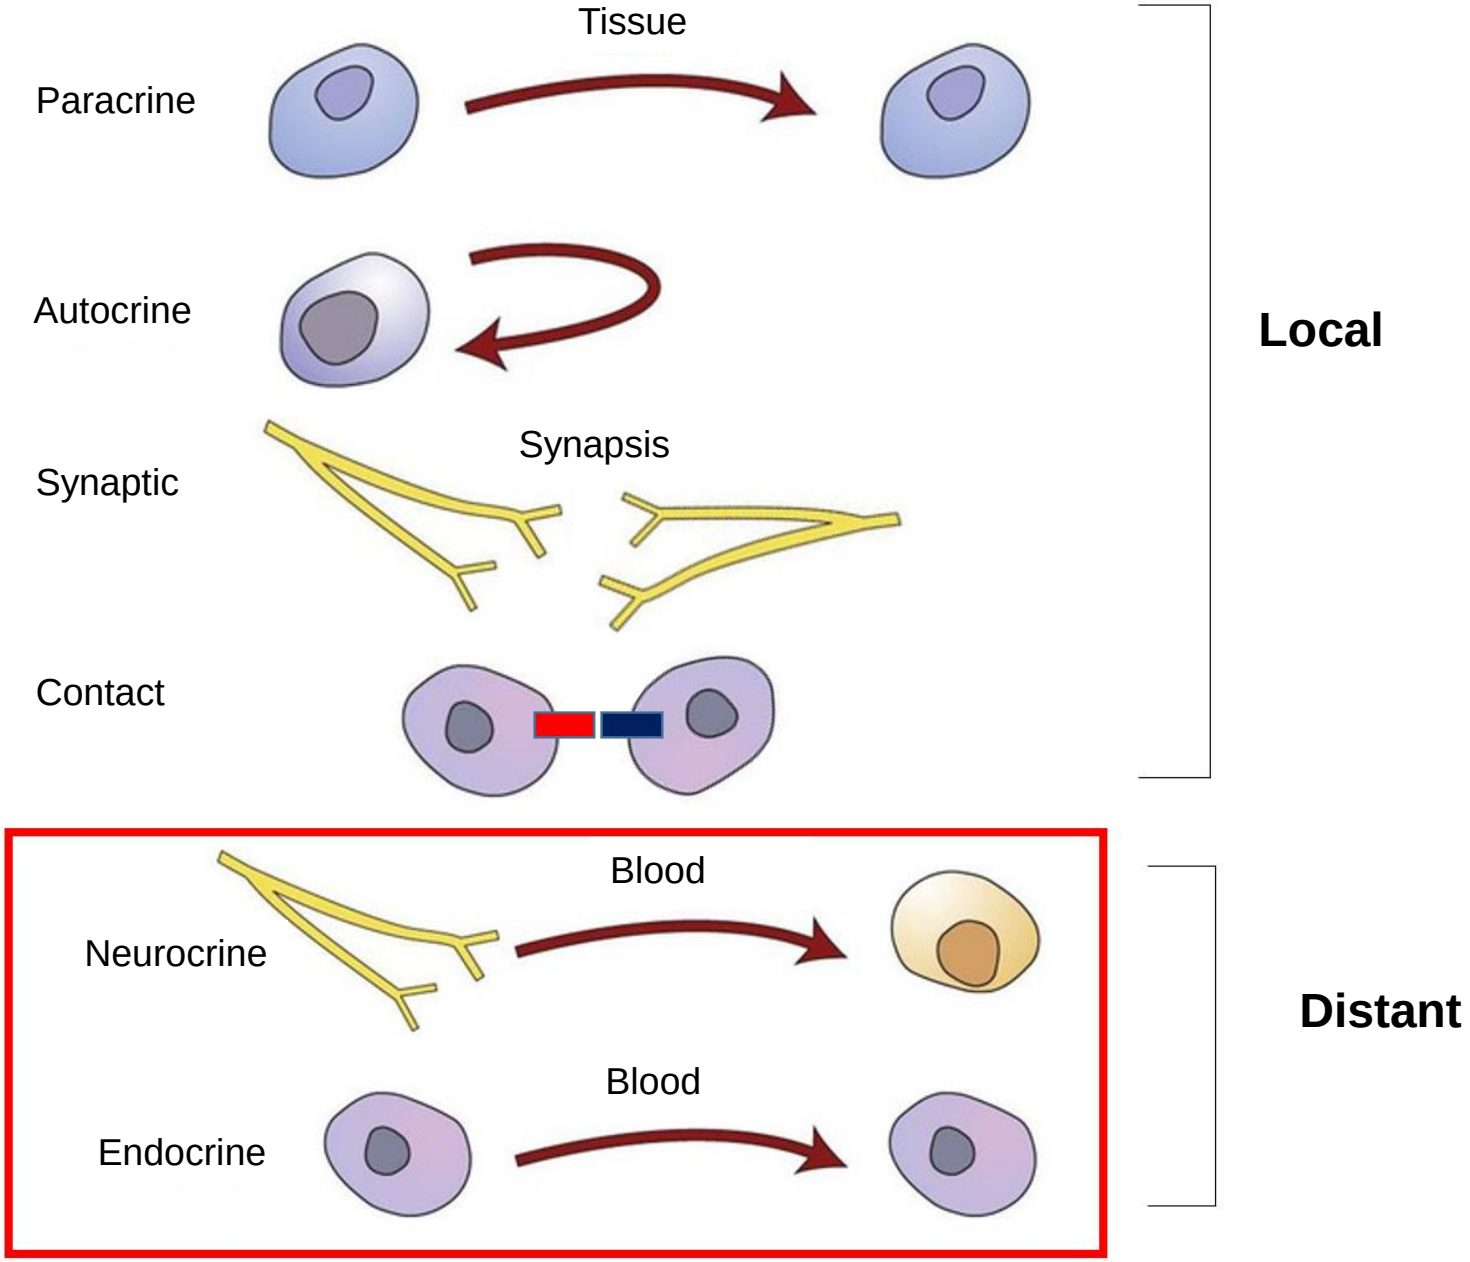
Endocrine system



Endocrine system provides intercellular communication on a long distance



INTERCELULAR COMMUNICATIONS

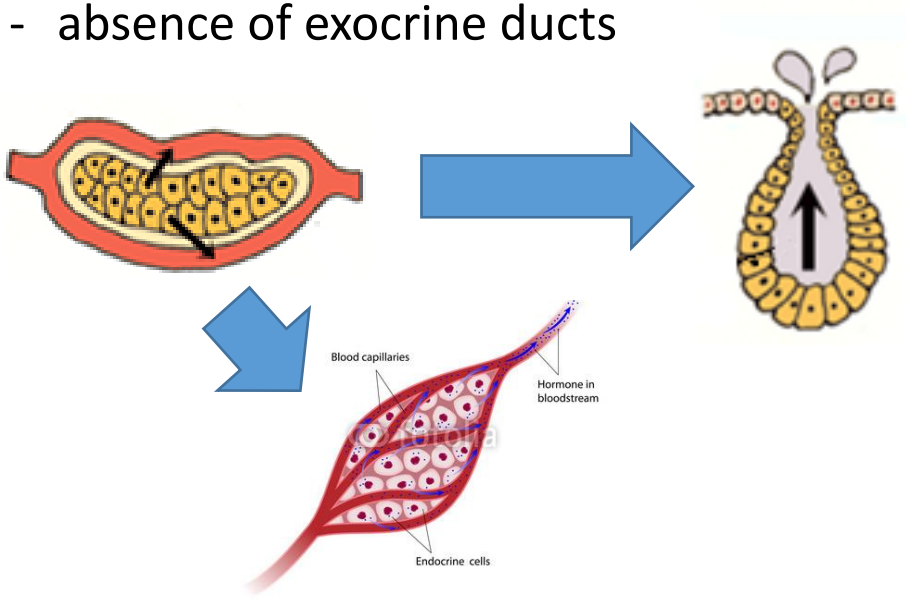


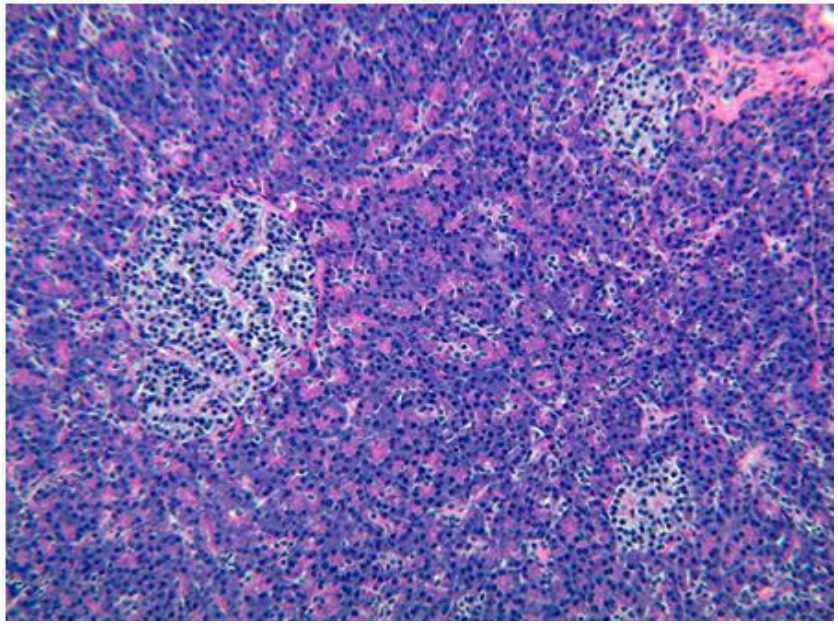
GENERAL PROPERTIES OF ENDOCRINE ORGANS

- **Endocrine organs** (e.g. pituitary, thyroid, parathyroid, adrenal)
- **Endocrine tissue within other organs**
  (pancreas, gonads, kidneys, placenta)
- **Isolated endocrine cells** (DNES, APUD)
- **Neuroendocrine cells**

- **Common developmental scheme**

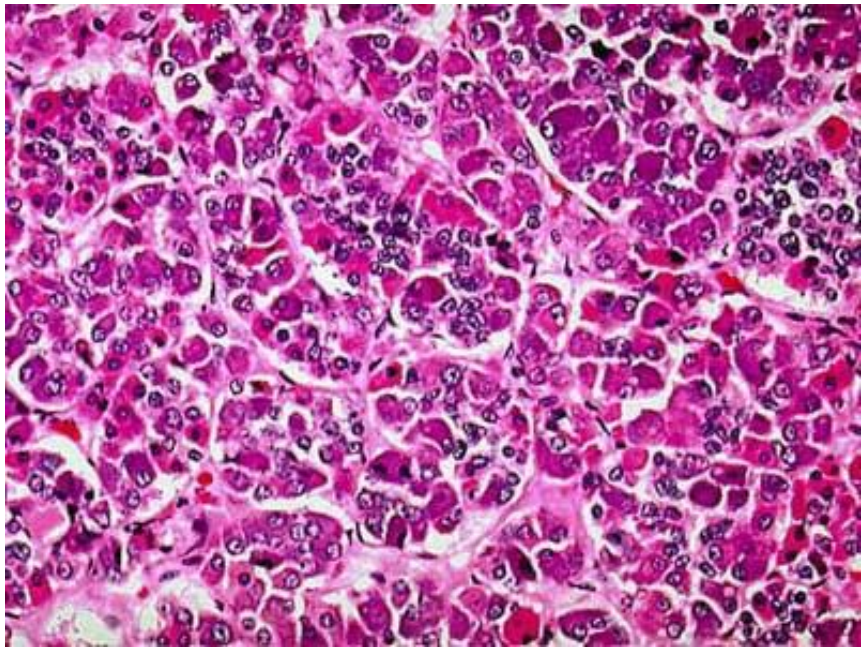
- invagination of epithelial layer
- contact with original tissue lost during development
- absence of exocrine ducts

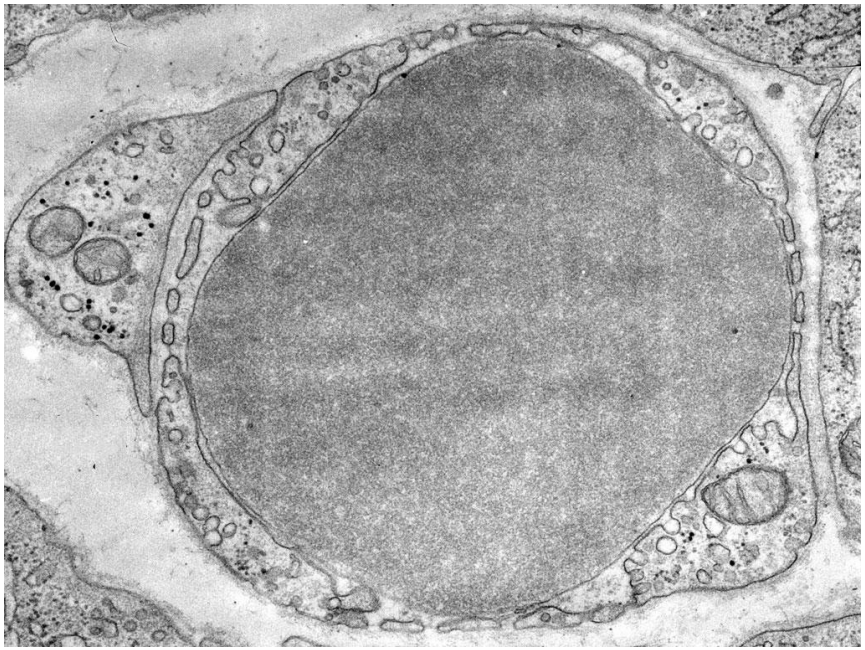




GENERAL PROPERTIES OF ENDOCRINE ORGANS

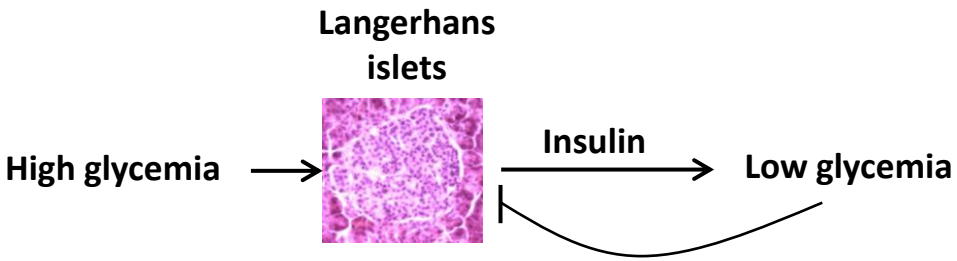
- C.t. capsule + septs
- **Trabecules** of glandular epithelium or **follicles** or **clusters** of glandular cells
- **Capillary network**
  - Fenestrated capillaries
  - Sinusoids



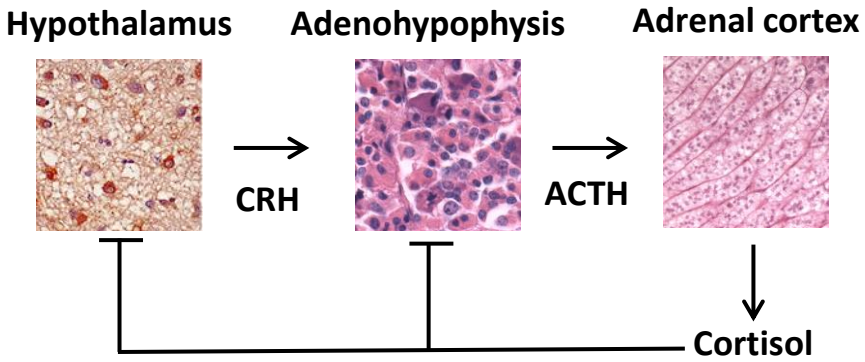


REGULATION OF HORMONE SECRETION

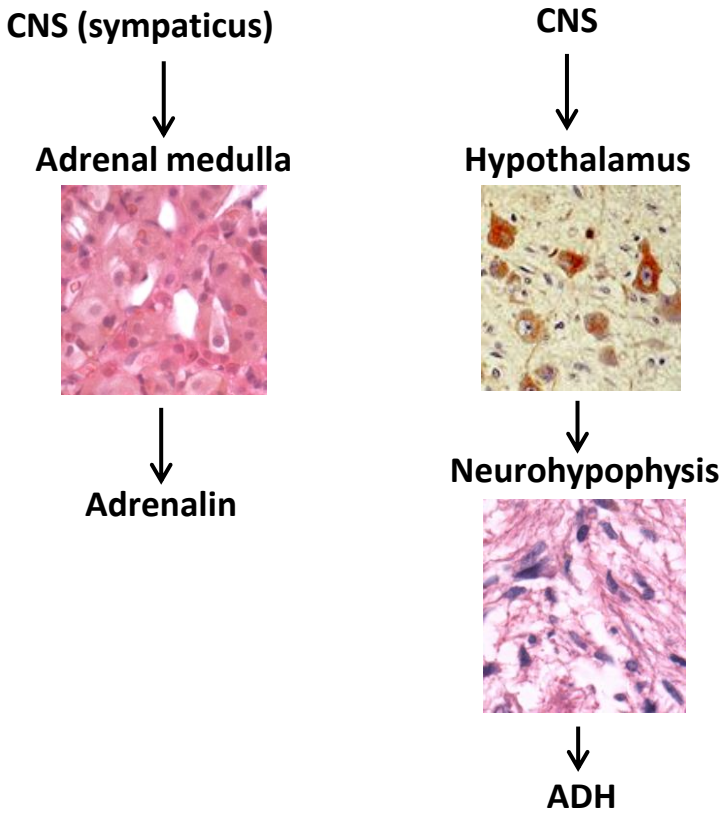
1. Negative feedback by change of metabolic state



2. Negative feedback by increased concentration of secreted hormone



3. Nerve system – direct innervation



GENERAL PROPERTIES OF HORMONES

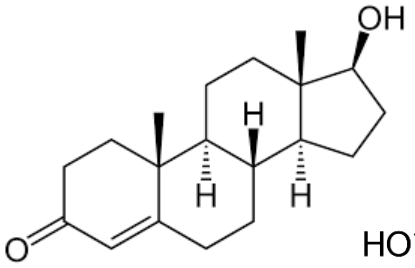
- hormones are chemical messengers delivered by bloodstream to target cells and tissues
- chemical nature of hormone determines is function

- classification
  - **water soluble**
  - **water insoluble**

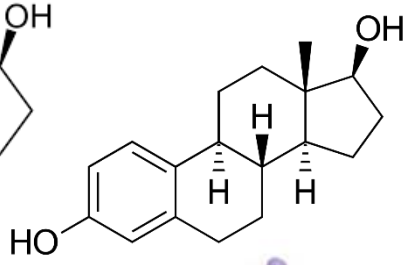
  - **surface receptors**
  - **nuclear receptors**

GENERAL PROPERTIES OF HORMONES

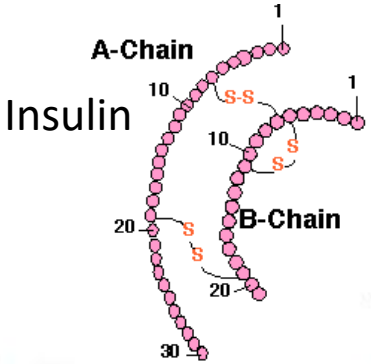
- **steroids** – hydrophobic, intracytoplasmic or nuclear receptors (sex hormones, corticosteroids)
- **proteins and polypeptides** – hydrophilic, plasma membrane receptors (insulin, pituitary hormones, PTH, …)
- **aminoacids** and their amine derivatives (adrenalin, noradrenalin, thyroxin)



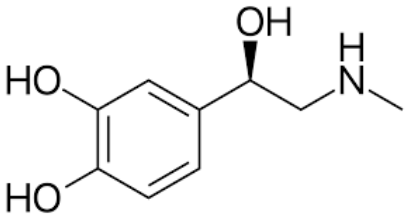
Testosterone



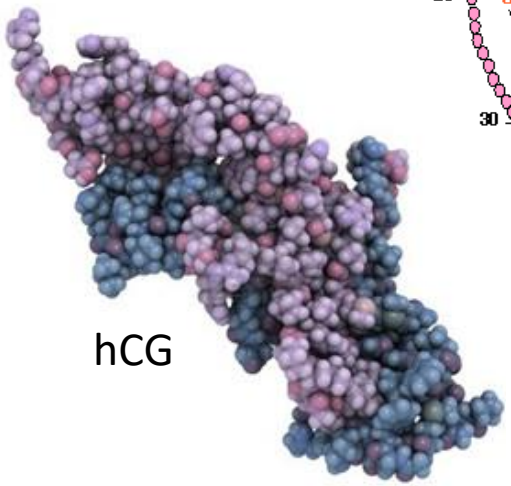
Estradiol



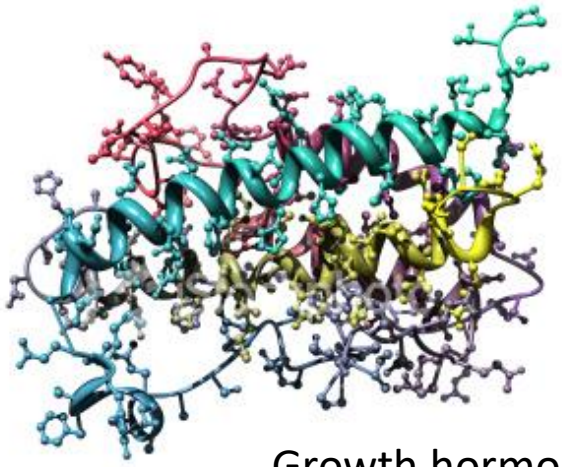
Melatonin



Adrenalin

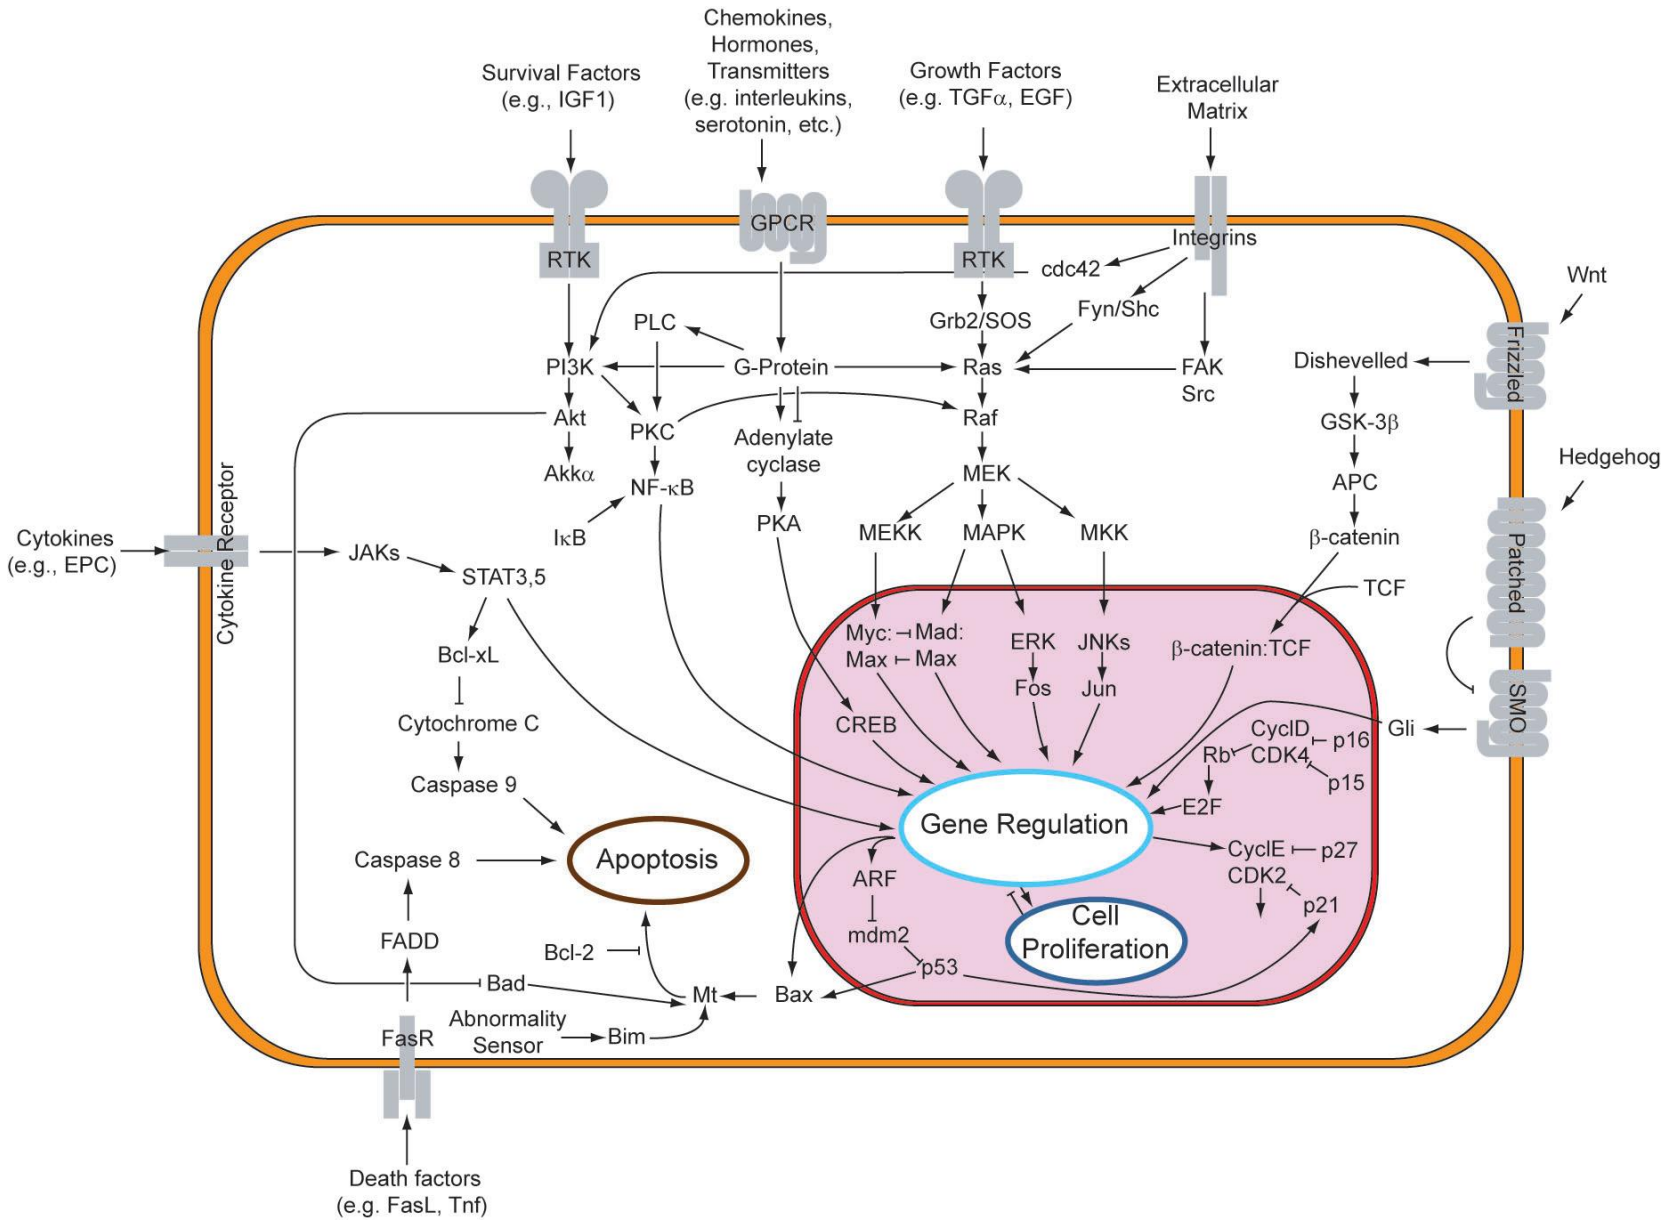


hCG

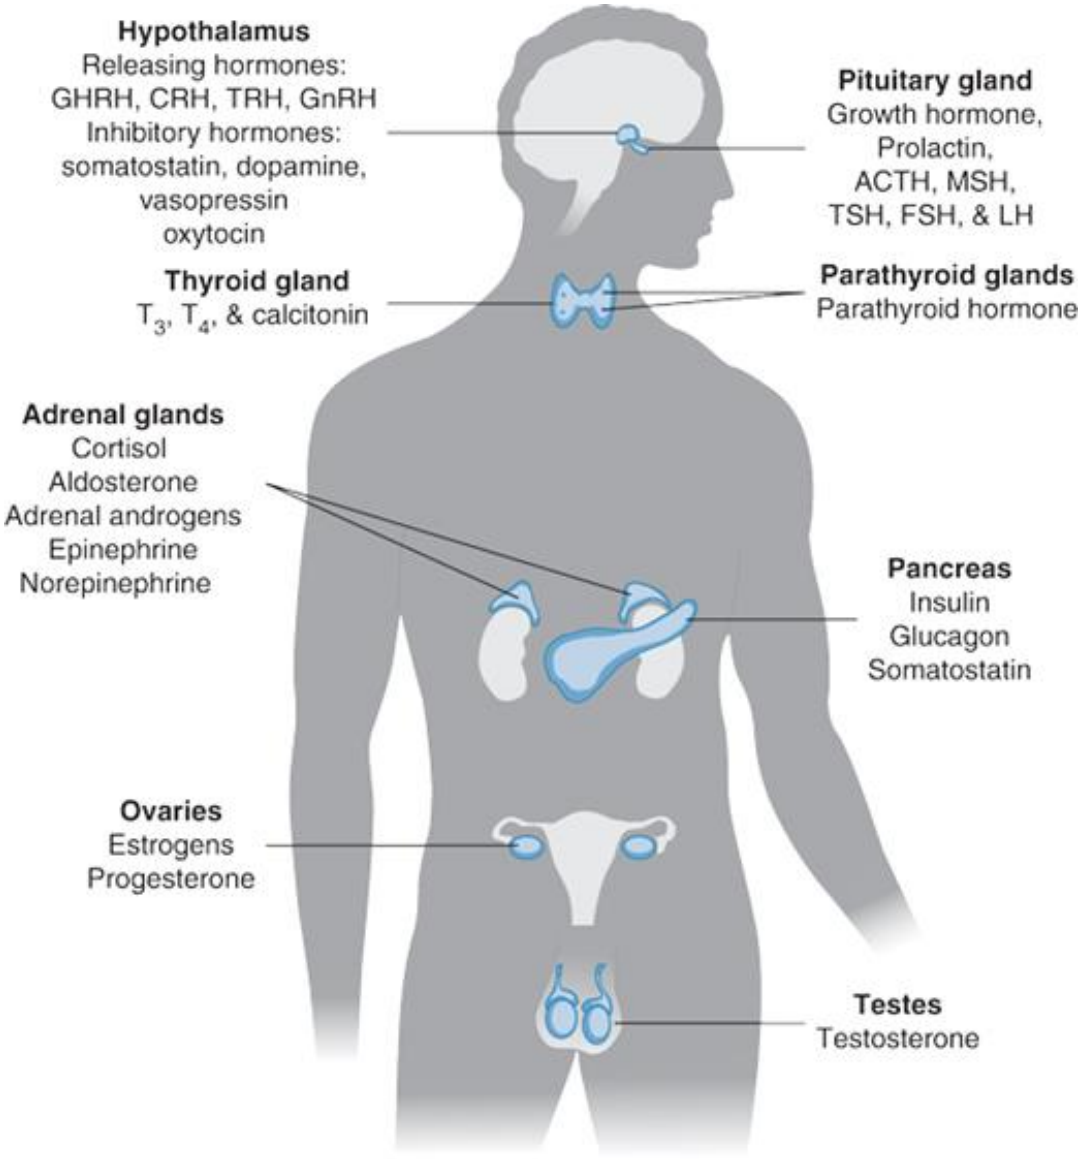


Growth hormone

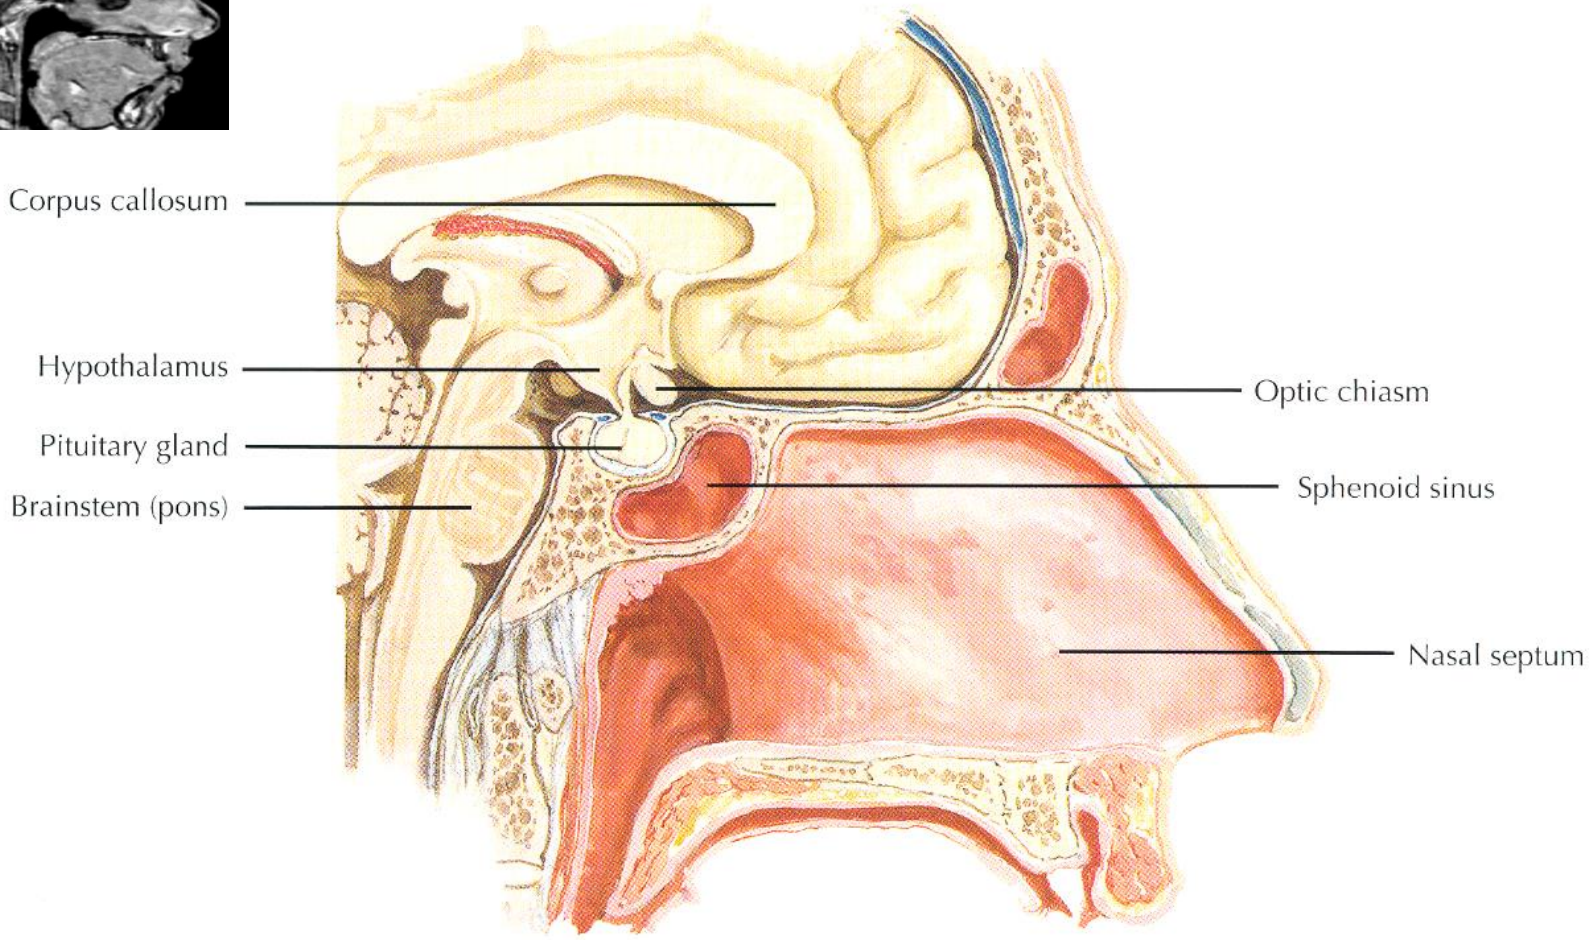
GENERAL PROPERTIES OF HORMONES



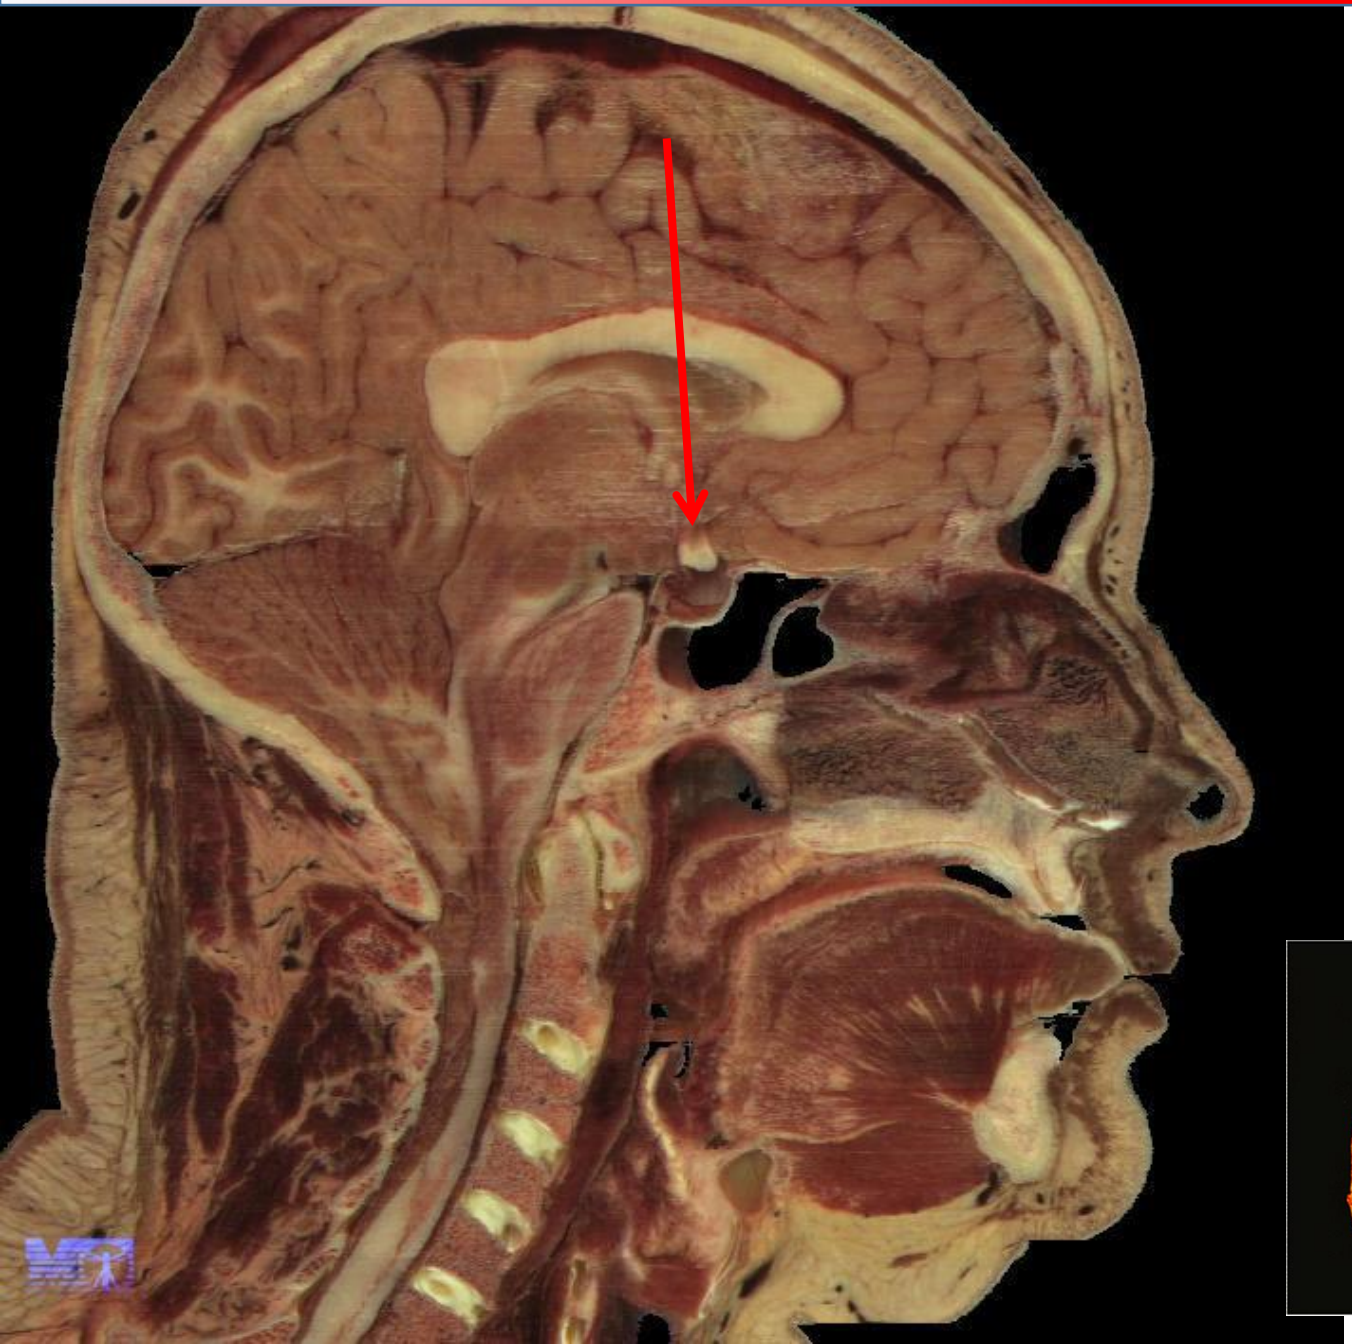
ENDOCRINE GLANDS



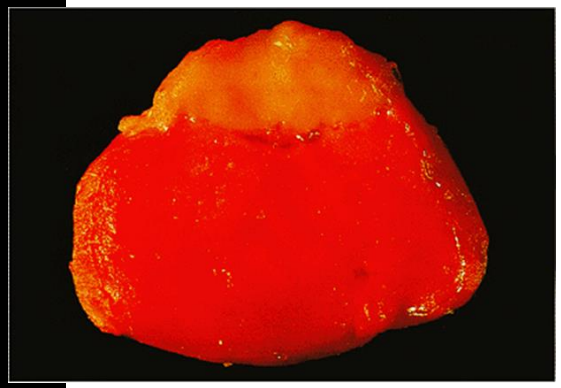
PITUITARY GLAND (GL. PITUITARIA)



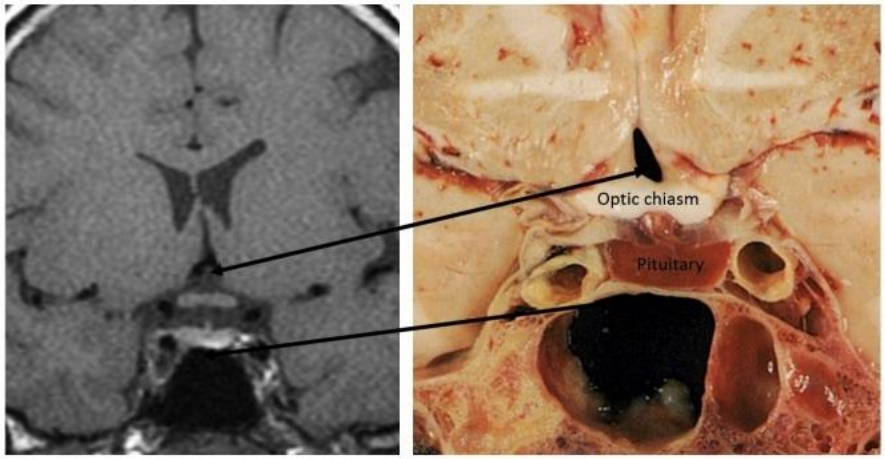
PITUITARY GLAND (GL. PITUITARIA)

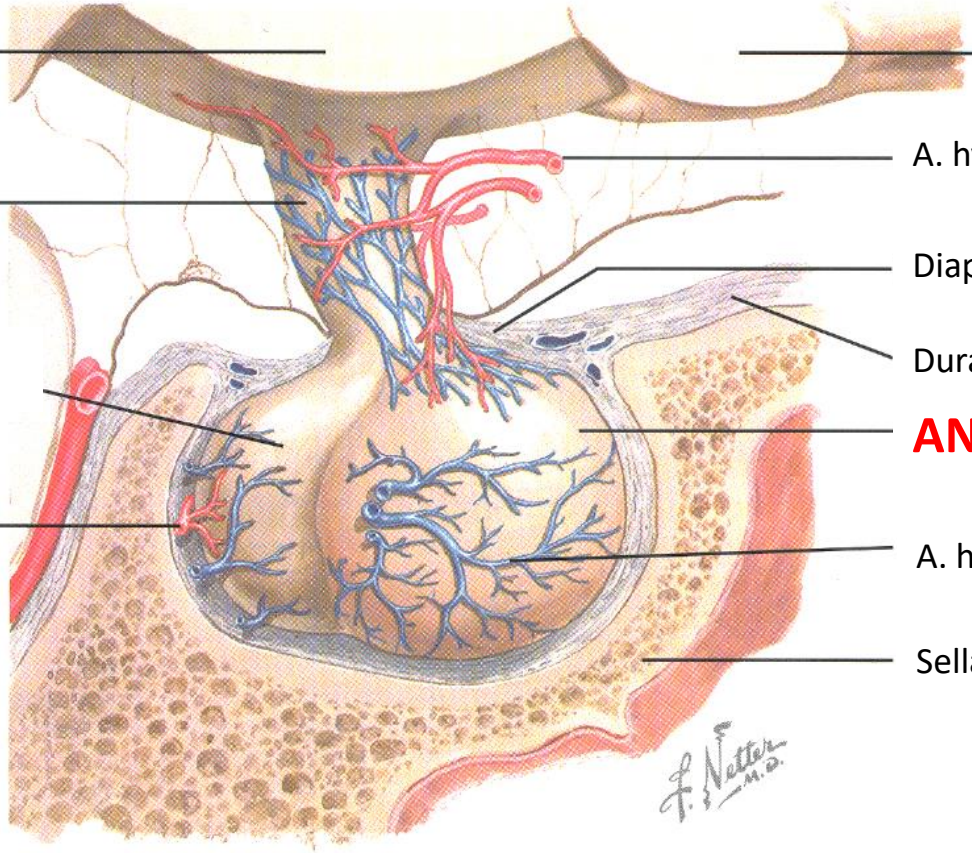


- hypothalamus
- sella turcica
- fossa hypophysialis
- optic chiasm



PITUITARY (GL. PITUITARIA)

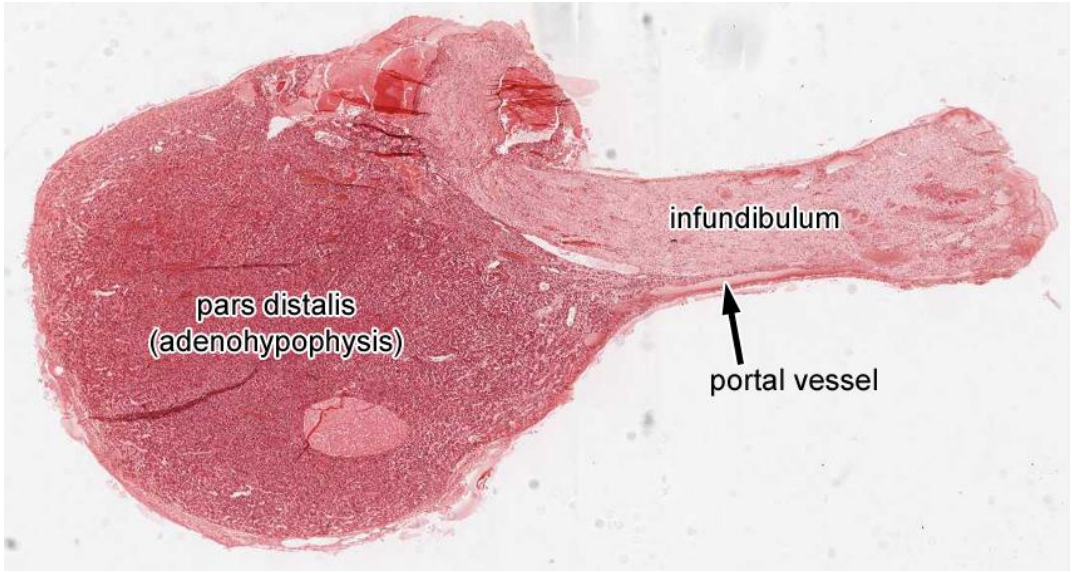


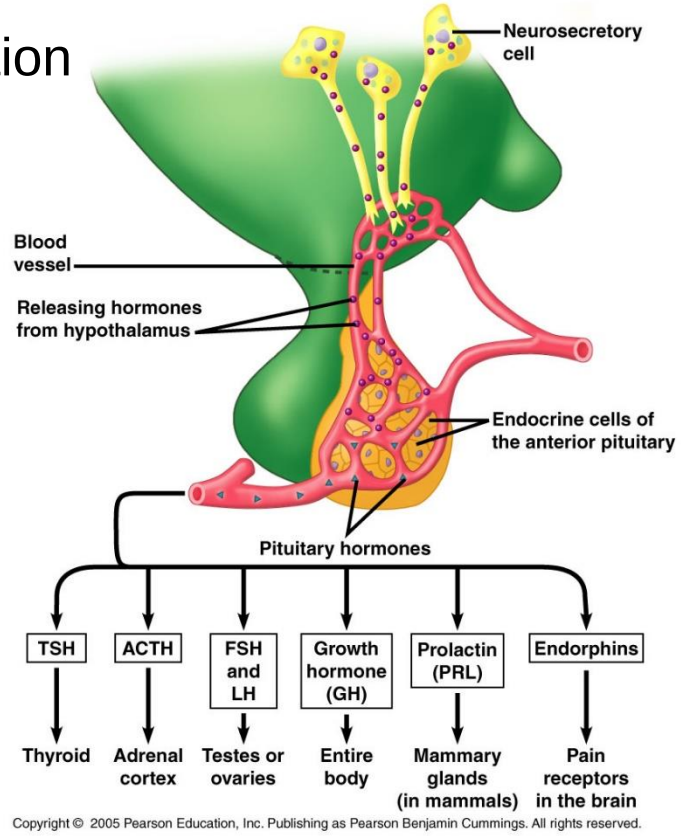


PITUITARY GLAND (GL. PITUITARIA)

- adenohypophysis - glandotropic hormones, prolactin, GH
- neurohypophysis - hypothalamic hormones - ADH, oxytocin

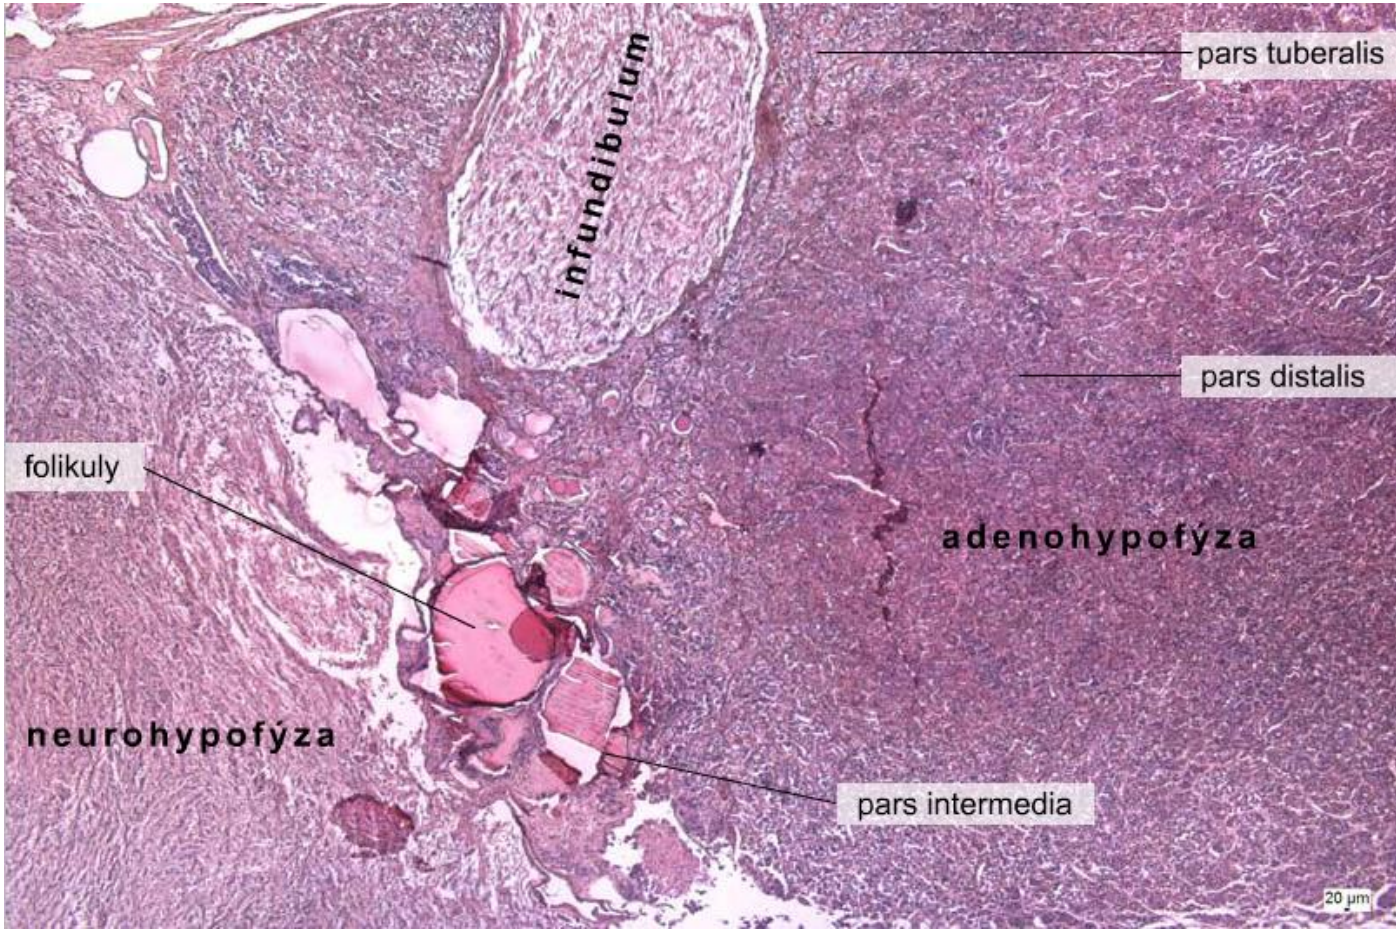
- anatomical and functional association with hypothalamus
- capillary systems and neuroendocrine secretion





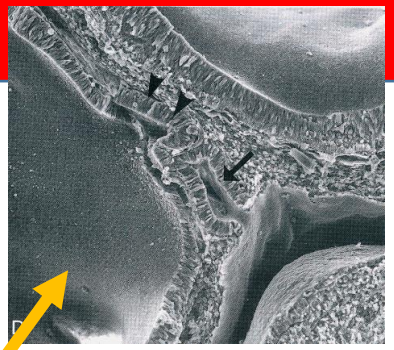
PITUITARY GLAND (GL. PITUITARIA)

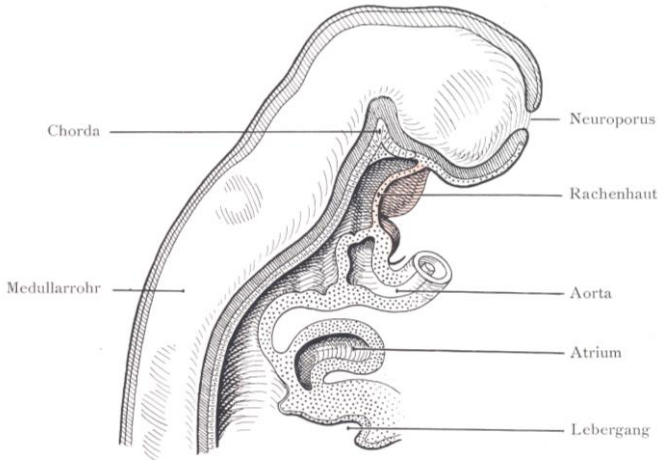
- adenohypophysis (*pars distalis, pars tuberalis, pars intermedia*)
- neurohypophysis (*pars nervosa*)
- *infundibulum, eminentia mediana*



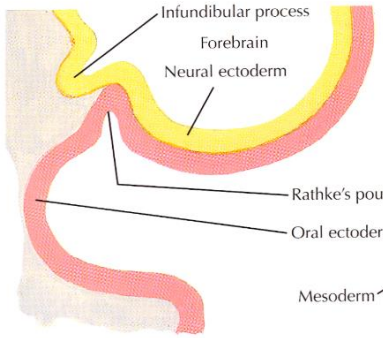
EMBRYONIC DEVELOPMENT OF PITUITARY GLAND

- Ectoderm of stomodeum (Rathke's pouch)
- Neuroectoderm of ventral wall of diencephalon



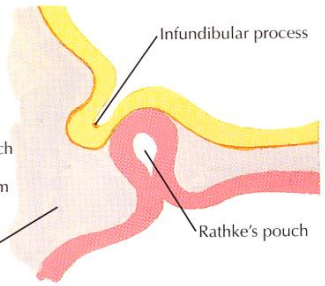


~ week 3



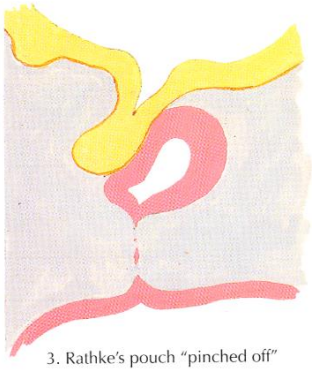
1. Beginning formation of Rathke's pouch and infundibular process

~ week 6

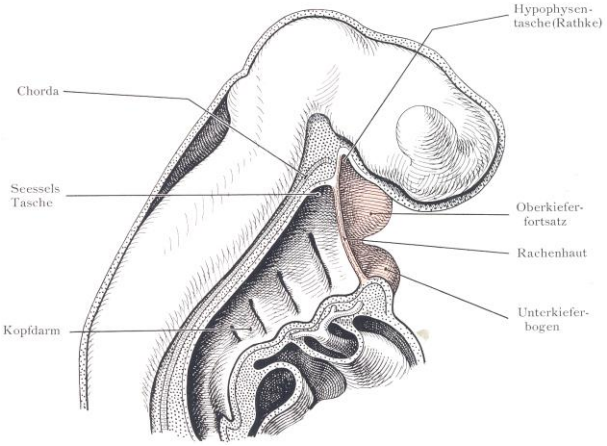


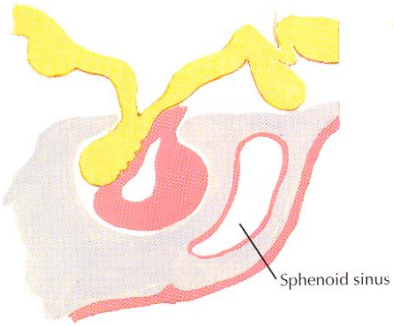
2. Neck of Rathke's pouch constricted by growth of mesoderm

~ week 8

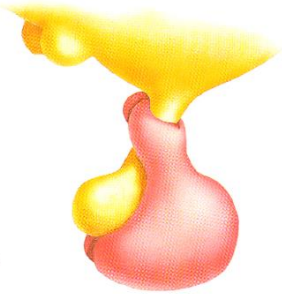


3. Rathke's pouch "pinched off"

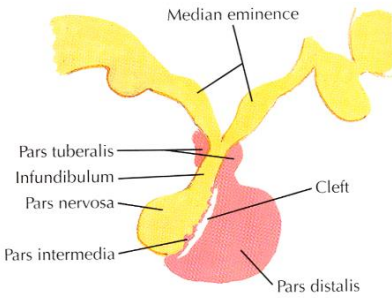




4. "Pinched off" segment conforms to neural process, forming pars distalis, pars intermedia and pars tuberalis



5. Pars tuberalis encircles infundibular stalk (lateral surface view)

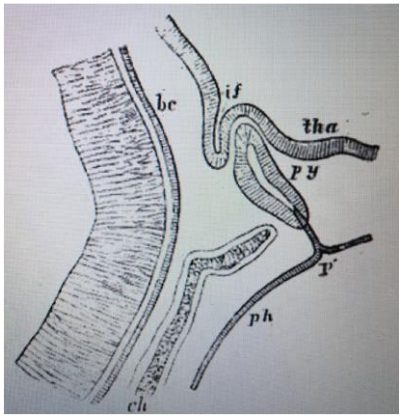


6. Mature form

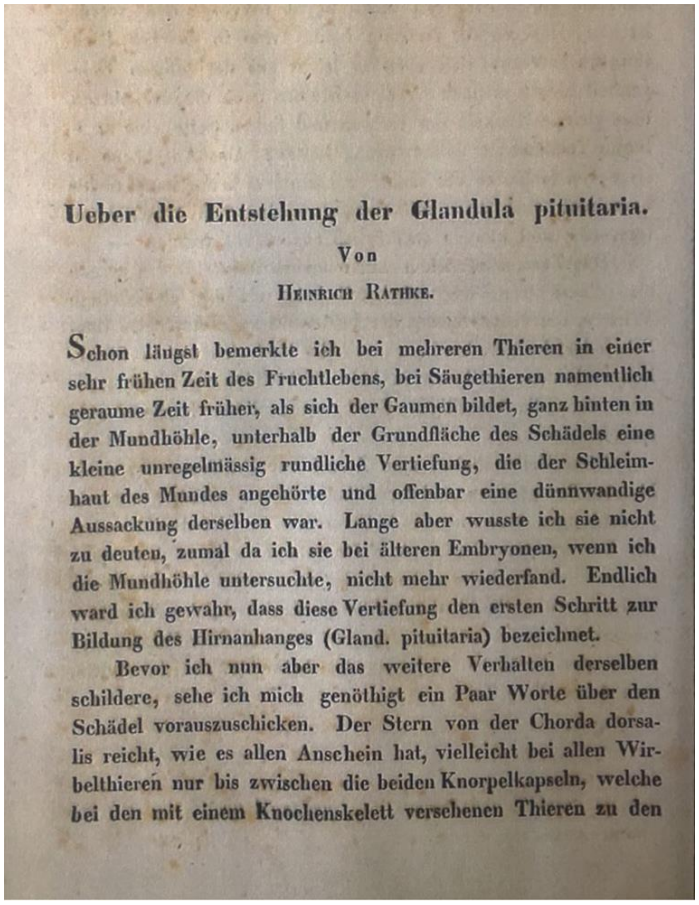
~ week 11

~ week 16

MARTIN HEINRICH RATHKE (1793 – 1860)



- Physician, anatomist,embryologist, zoologist
- One of founding fathers of modern embryology



Ueber die Entstehung der Glandula pituitaria.

Von

Heinrich Rathke.

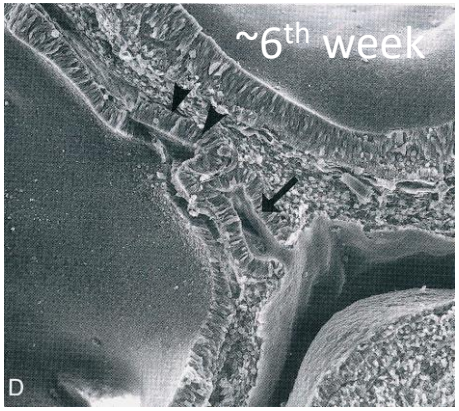
Schon längst bemerkte ich bei mehreren Thieren in einer sehr frühen Zeit des Fruchtlebens, bei Säugethieren namentlich geraume Zeit früher, als sich der Gaumen bildet, ganz hinten in der Mundhöhle, unterhalb der Grundfläche des Schädels eine kleine unregelmässig rundliche Vertiefung, die der Schleimhaut des Mundes angehörte und offenbar eine dünnwandige Aussackung derselben war. Lange aber wusste ich sie nicht zu deuten, zumal da ich sie bei älteren Embryonen, wenn ich die Mundhöhle untersuchte, nicht mehr wiederfand. Endlich ward ich gewahr, dass diese Vertiefung den ersten Schritt zur Bildung des Hirnanhanges (Gland. pituitaria) bezeichnet.

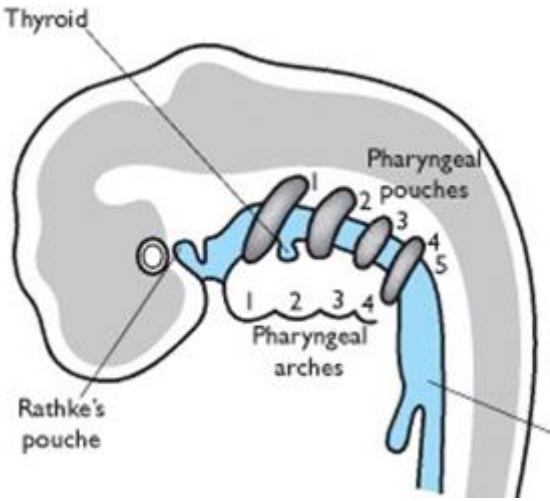
Bevor ich nun aber das weitere Verhalten derselben schildere, sehe ich mich genöthigt ein Paar Worte über den Schädel vorauszuschicken. Der Stern von der Chorda dorsalis reicht, wie es allen Anschein hat, vielleicht bei allen Wirbelthieren nur bis zwischen die beiden Knorpelkapseln, welche bei den mit einem Knochenskelett versehenen Thieren zu den

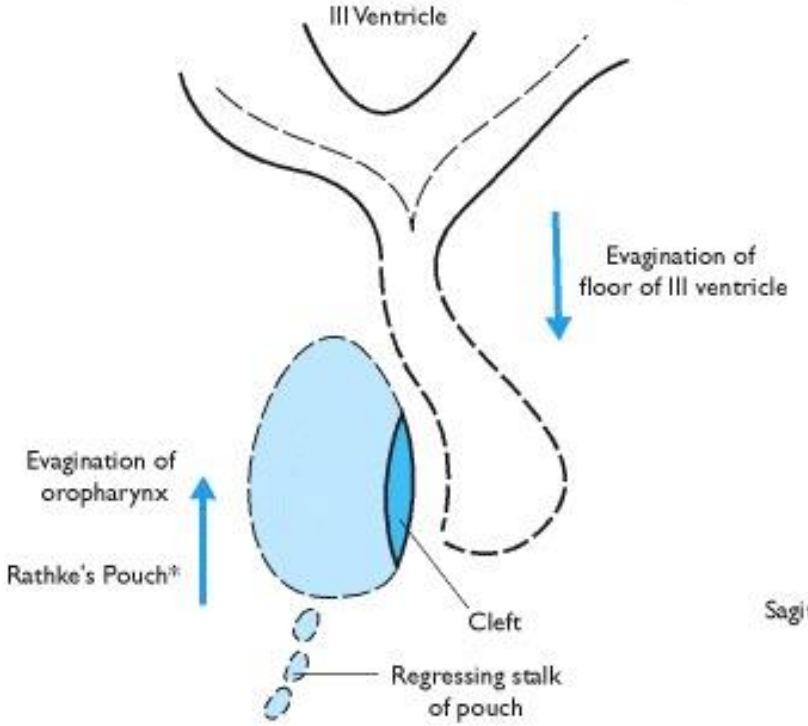
"For a long time I have observed in several animals ... a small irregularly rounded depression which belongs to the mucous membrane of the mouth, of which it is clearly a thin-walled outpocketing. ... Finally I saw that this depression represents the first step in the formation of the pituitary gland" (p. 482).

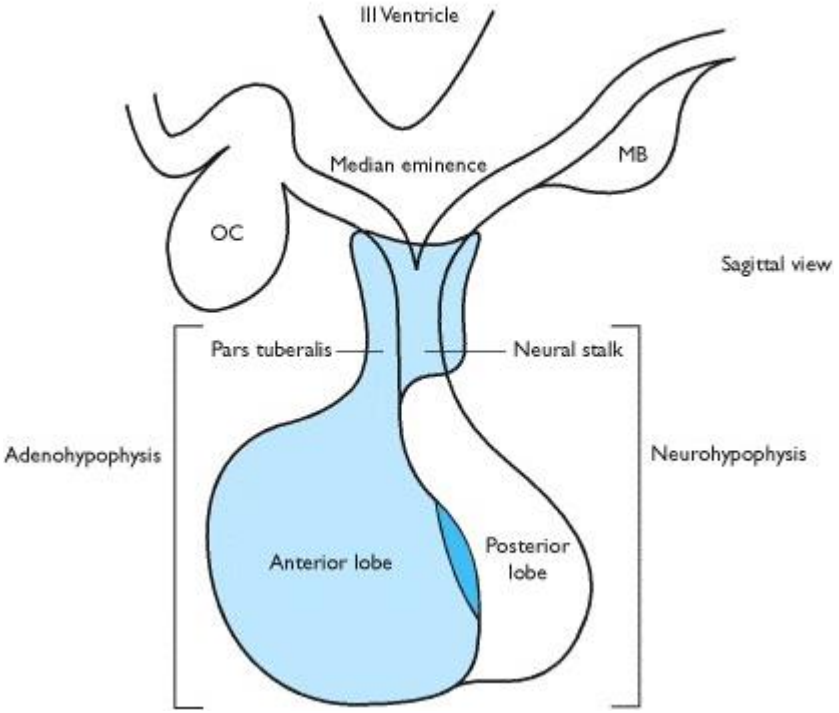
Rathke, H. : Ueber die Entstehung der glandula pituitaria. Arch, f . Anat,, Phys. und wiss. Med. S. 482-85. ***1838***

EMBRYONIC DEVELOPMENT OF PITUITARY GLAND

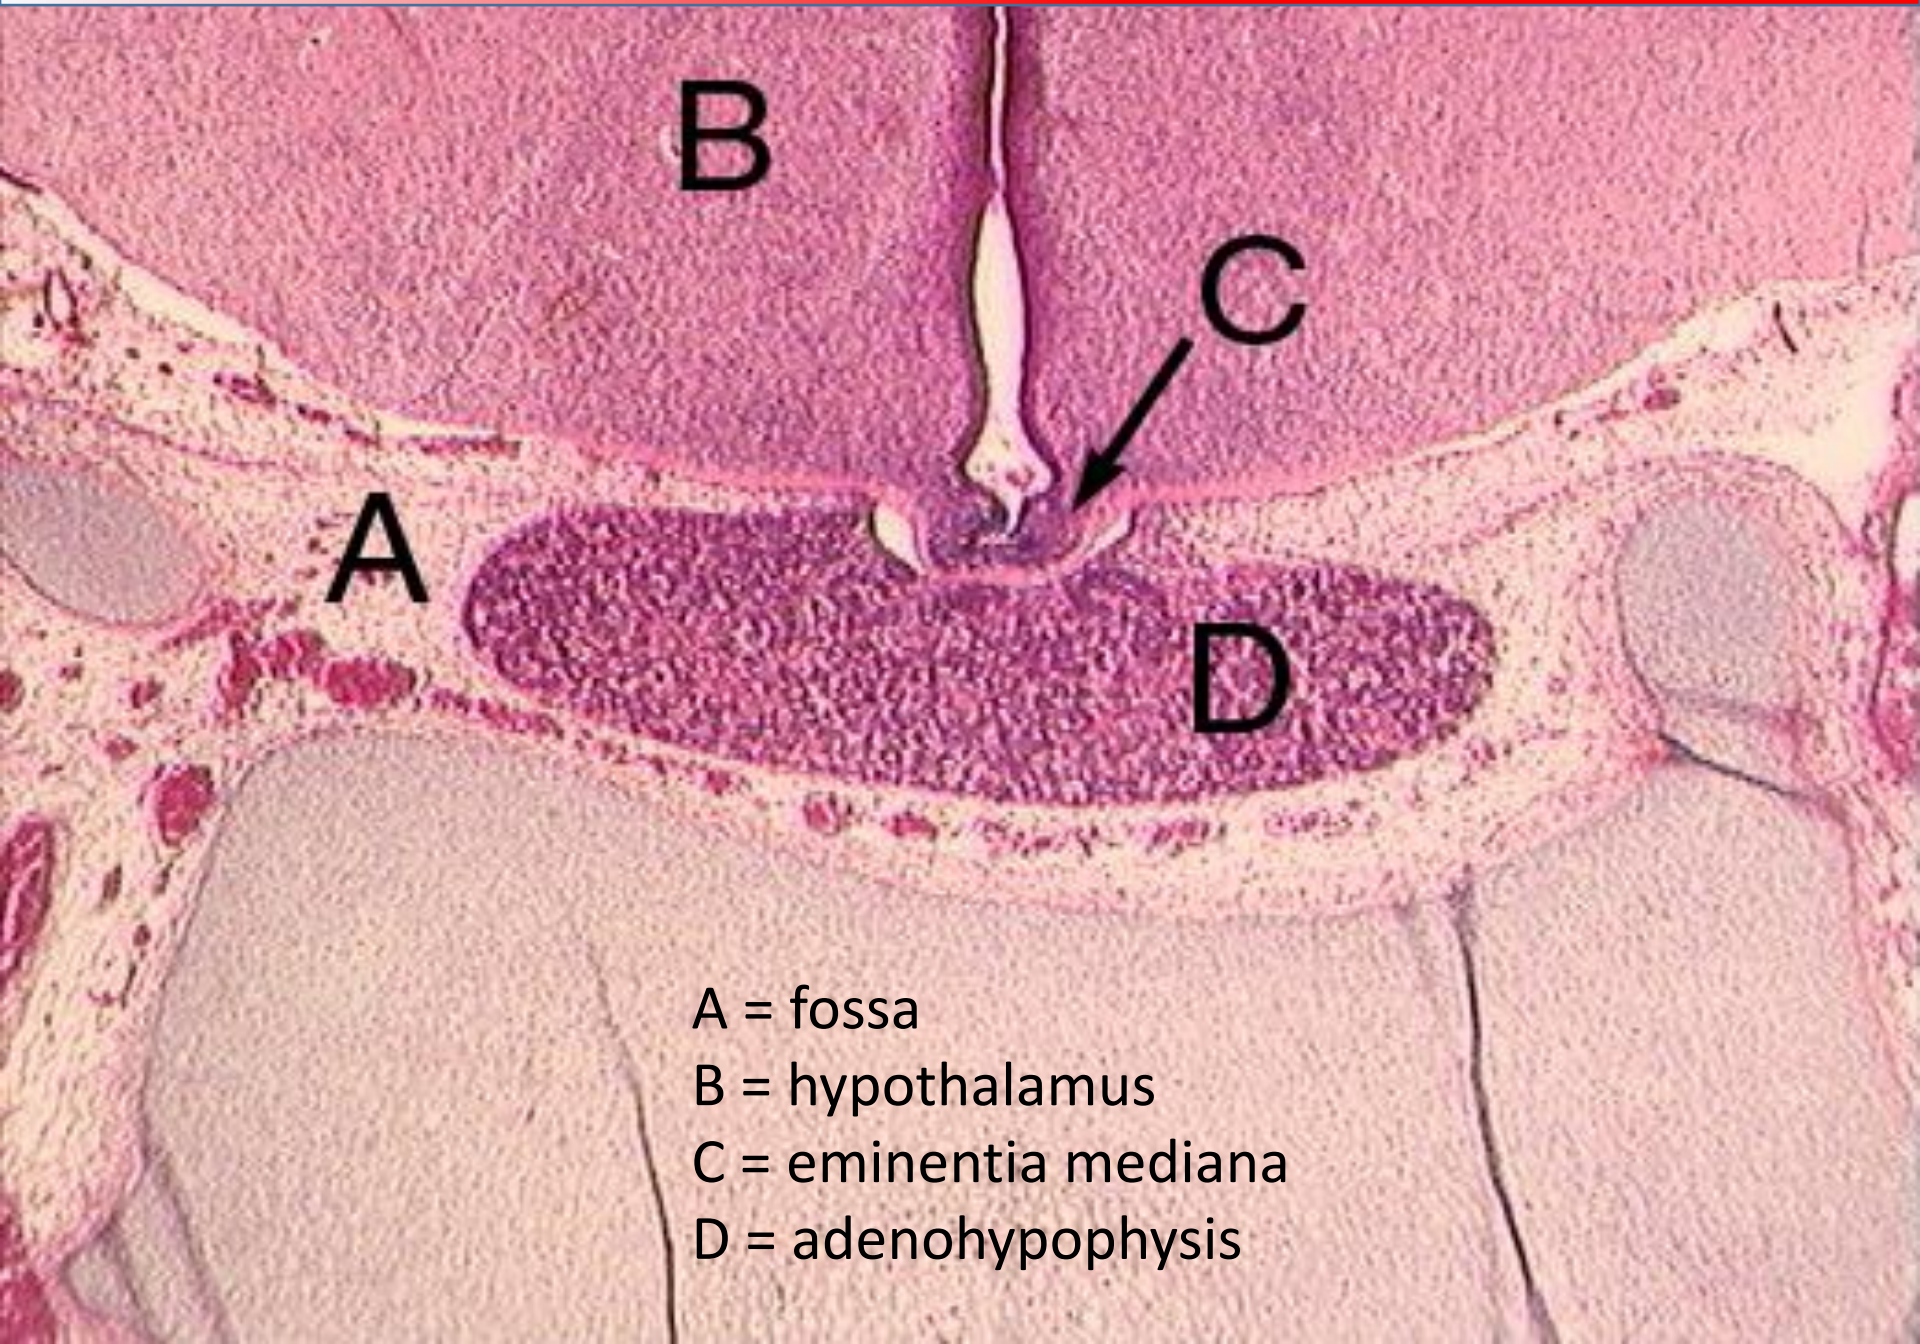








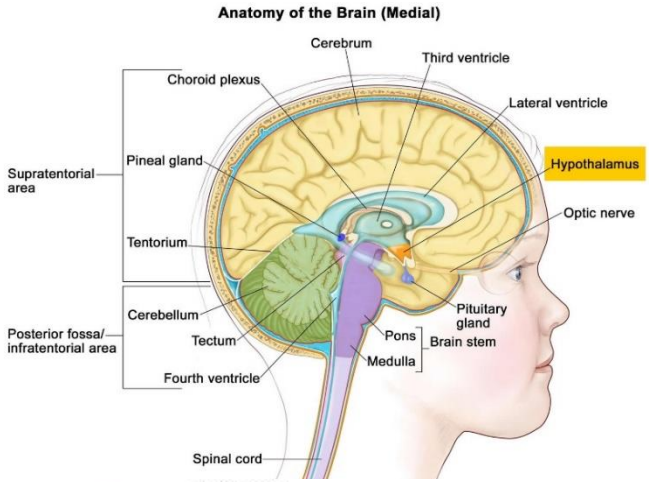
EMBRYONIC DEVELOPMENT OF PITUITARY GLAND

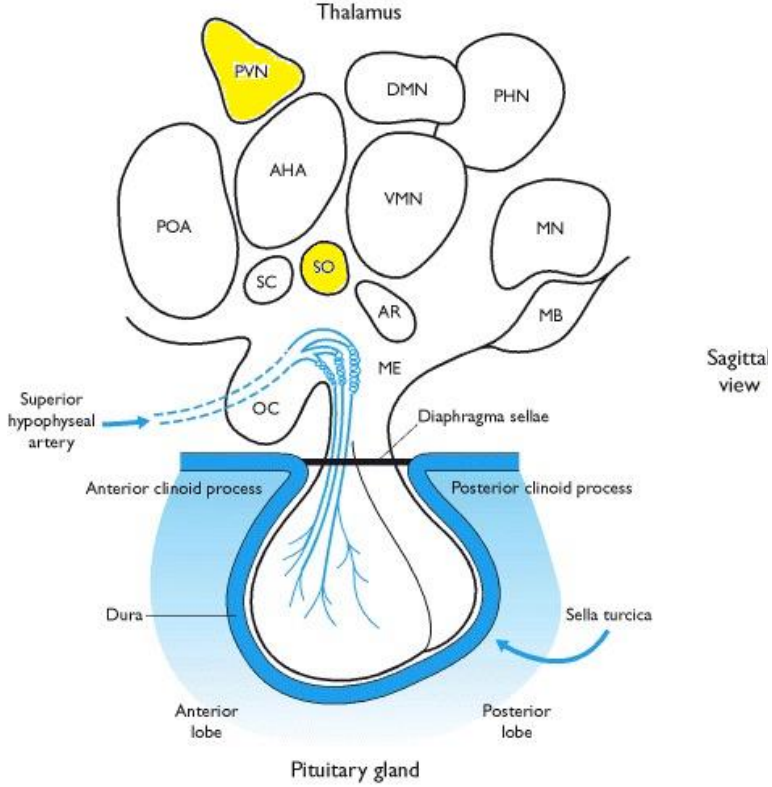


A = fossa
B = hypothalamus
C = eminentia mediana
D = adenohypophysis

HYPOTHALAMUS

- small region of diencephalon
- complex neuroarchitecture
- core of the limbic system
- complex functions
- regulation of temperature, emotions, eating behavior, circadian rhythms
- hormonal regulation controlled by various stimuli (osmoreception, concentration of nutrients, electrolytes, systemic functions - pain)
- **neurosecretion from hypothalamic nuclei**
- *n. supraopticus, n. paraventricularis*
- magnocelullar neurons - ***tractus hypothalamo-hypophysialis*** *- oxytocin and ADH through neurohypophysis*
- parvocelullar neurons - capillaries in *eminentia mediana* - *statins and liberins regulating secretion from adenohypophysis through* ***hypothalamo-hypophyseal portal system***

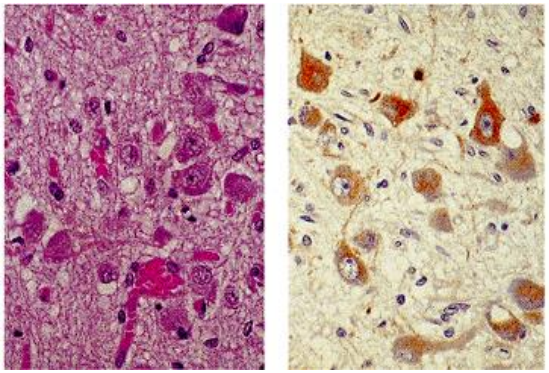




MECHANISM OF NEUROSECRETION

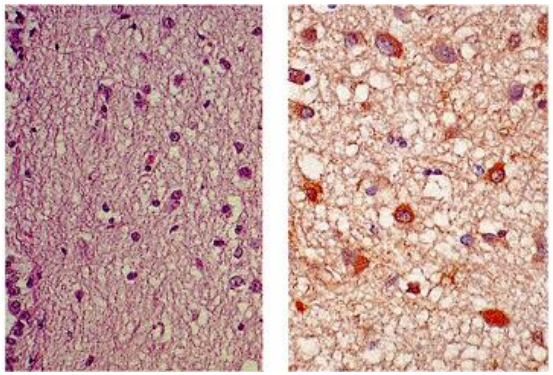
Tractus hypothalamo-hypophysialis

- axons of magnocelullar neurons in *nucleus supraopticus* and *paraventricularis*
- terminating on fenestrated capillaries in neurohypophysis
- synthesis of prohormones → maturation during axonal transport
- capillary plexus from *arteria hypophysialis inferior* (branch of *a. carotis interna* → *sinus cavernosus*



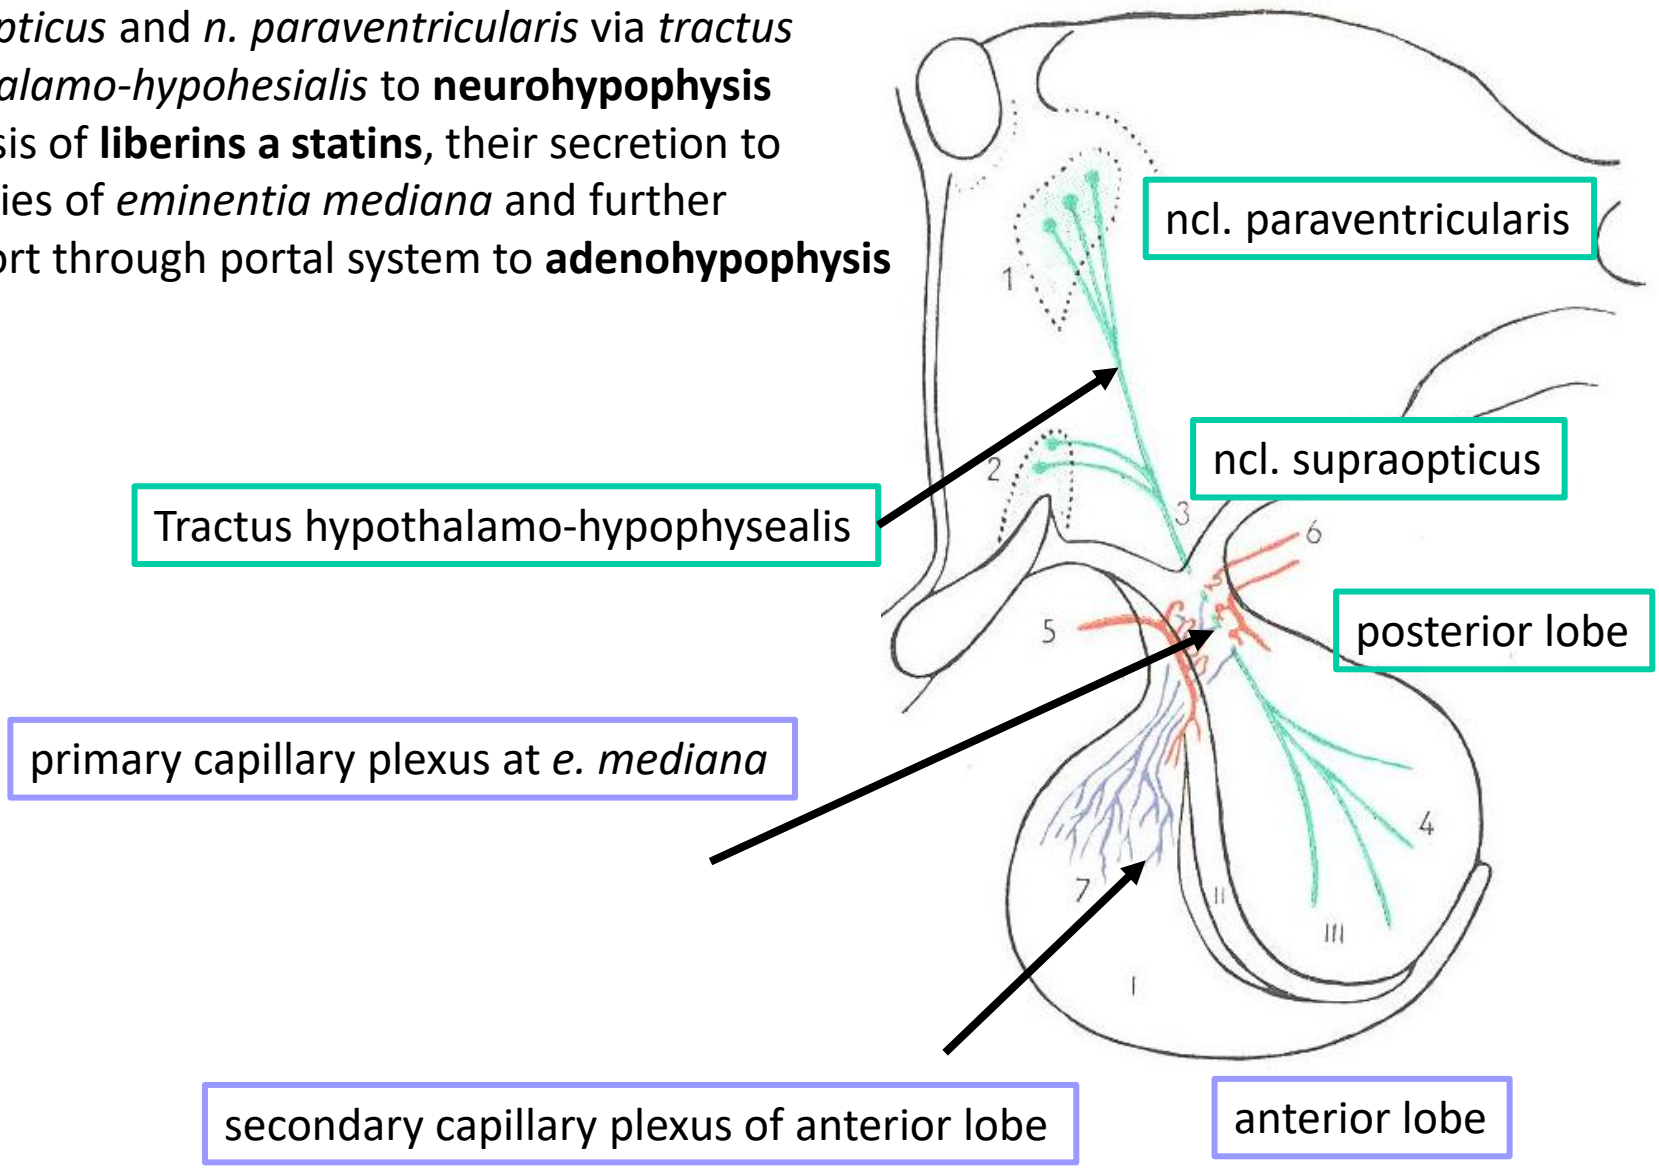
Hypophyseal portal system

- parvocellular neurons e.g. *in nucleus arcuatus*, *preopticus*, *paraventricularis* and *nuclei tuberales*
- axonal transport onto primary capillary plexus in ***eminentia mediana*** (from anterior and posterior superior hypophyseal arteries) → hypophyseal portal veins → secondary capillary plexus in adenohypophysis → inferior hypophyseal portal veins → *vv. jugulares internae*

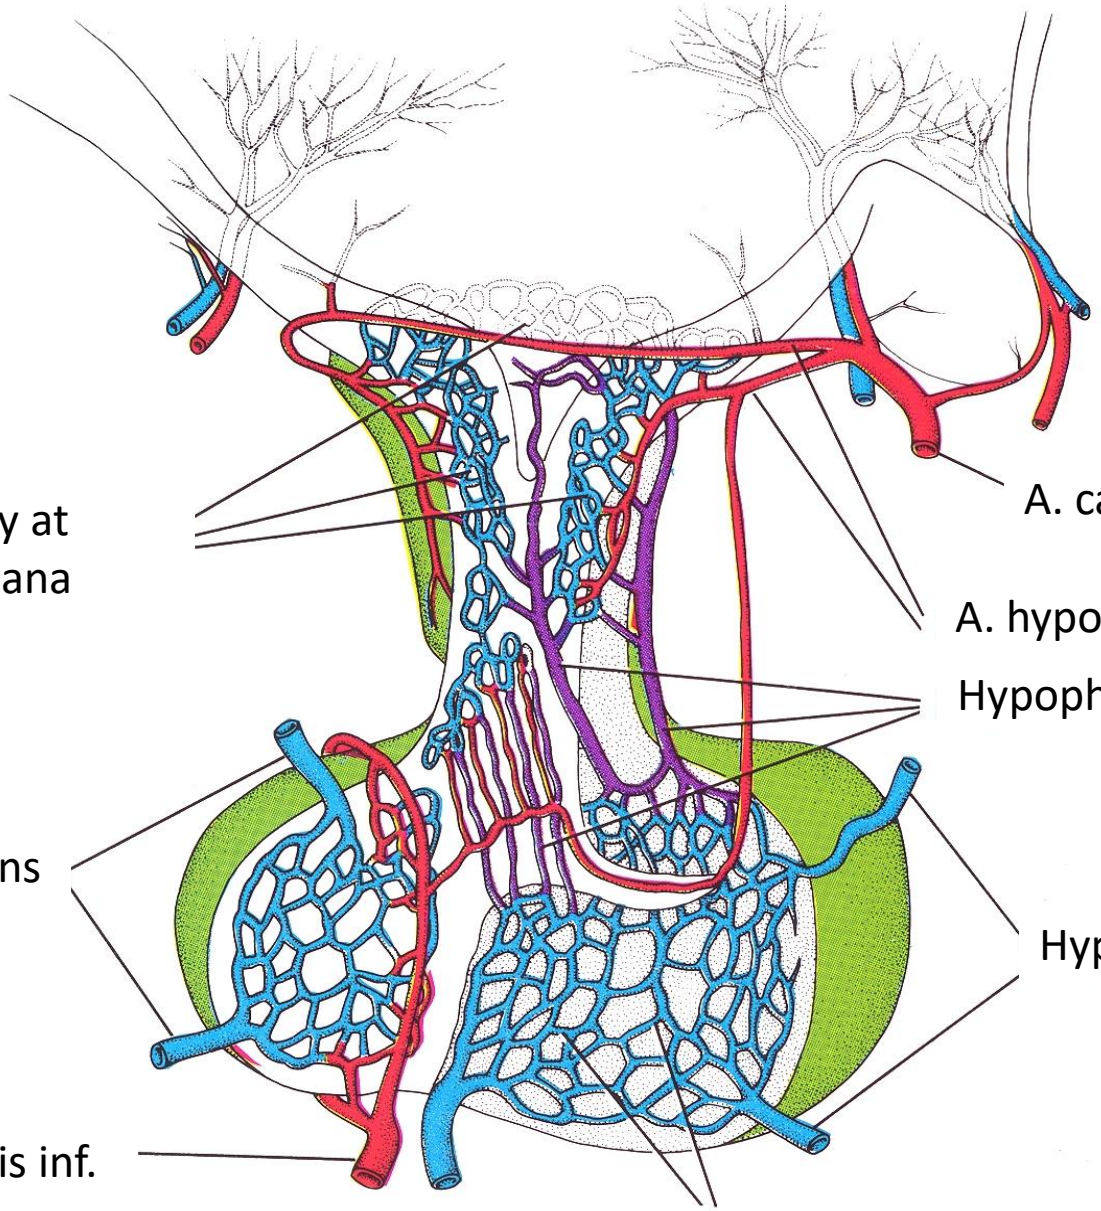


MECHANISM OF NEUROSECRETION

- synthesis and transport of **effector hormones from** *n. supraopticus* and *n. paraventricularis* via *tractus hypothalamo-hypohesialis* to **neurohypophysis**
- synthesis of **liberins a statins**, their secretion to capillaries of *eminentia mediana* and further transport through portal system to **adenohypophysis**

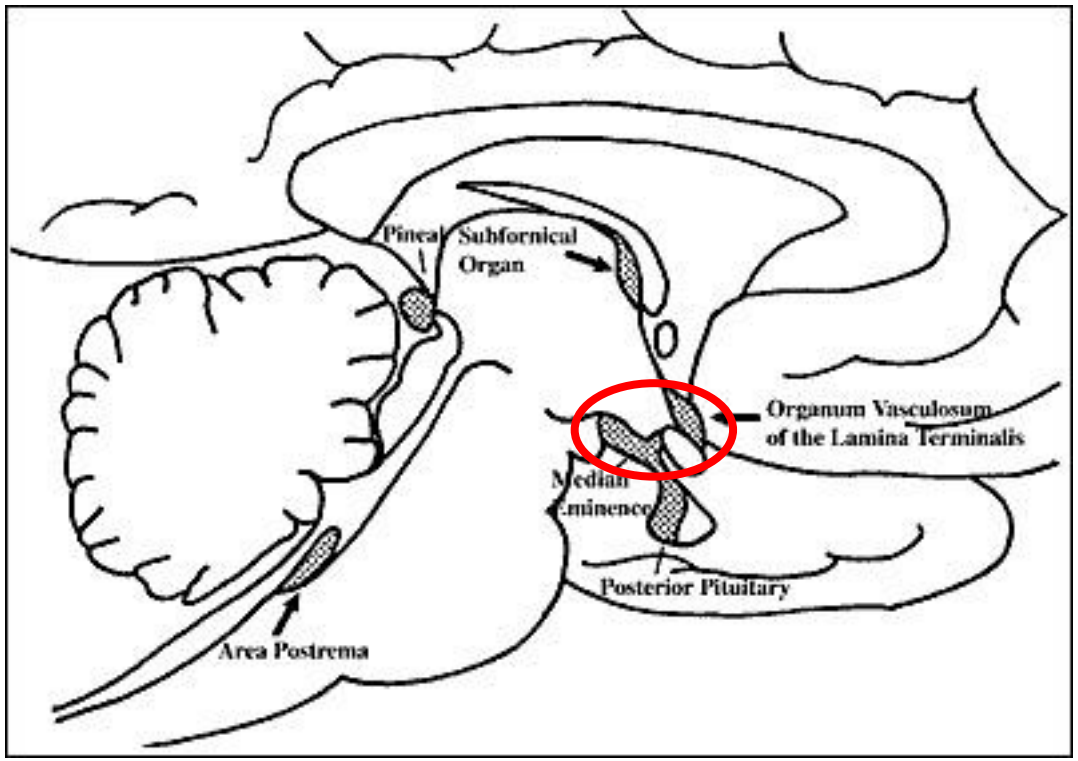


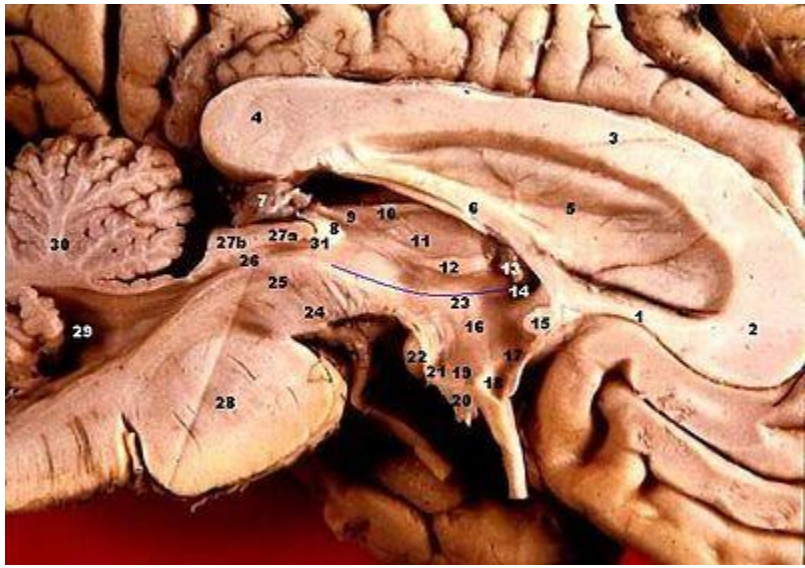
CAPILLARY SYSTEMS OF HYPOPHYSIS



EMINENTIA MEDIANA

- elevated part of *tuber cinereum* (detachment of infundibulum *p. nervosa*)
- neurohemal area - hematoencephalic barrier is open here
- fenestrated capillaries with large perivascular spaces

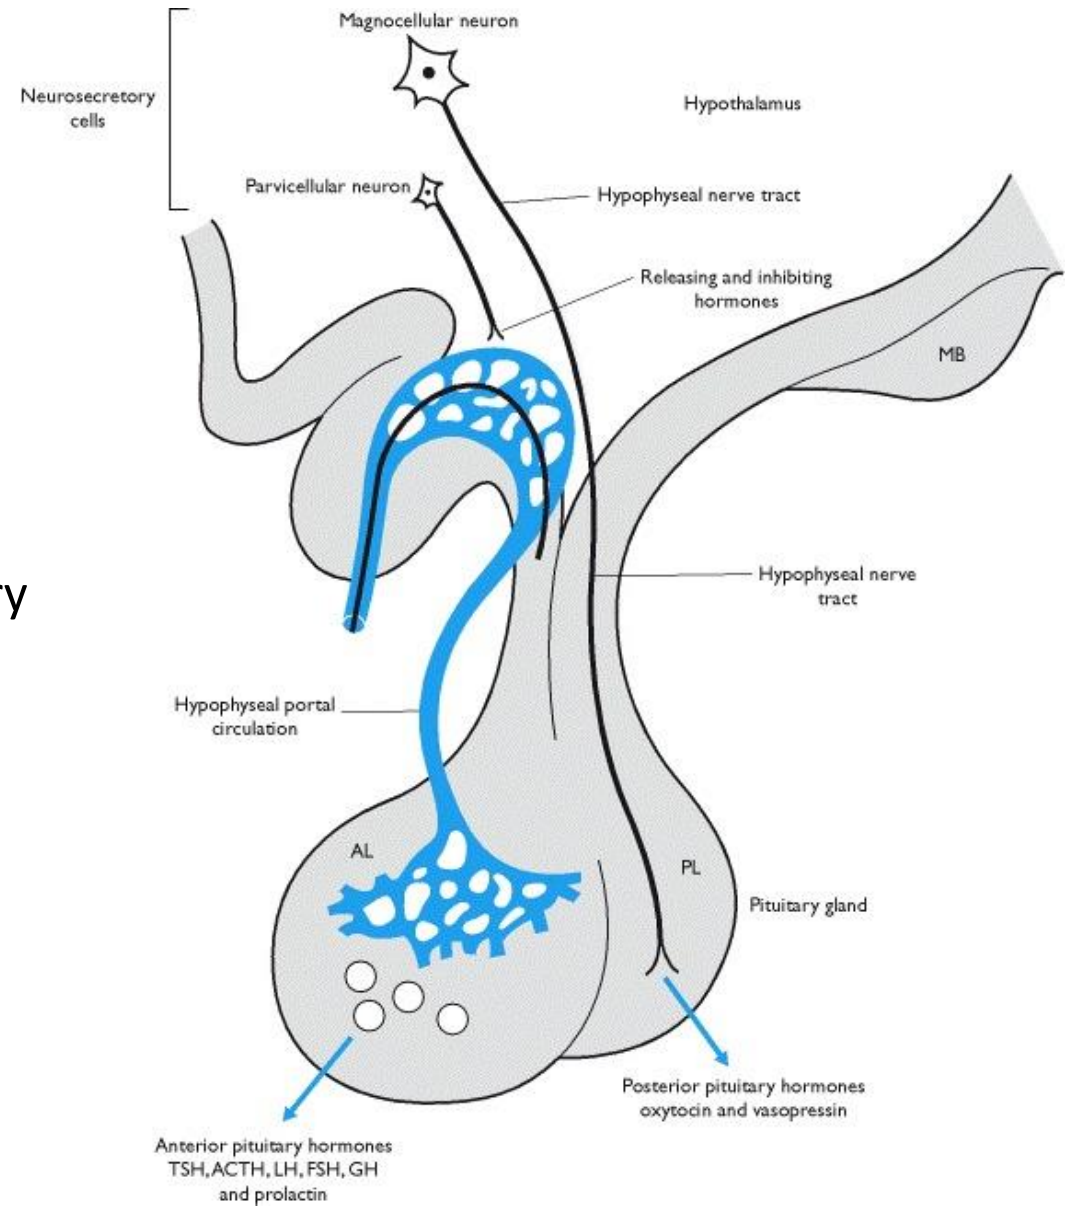




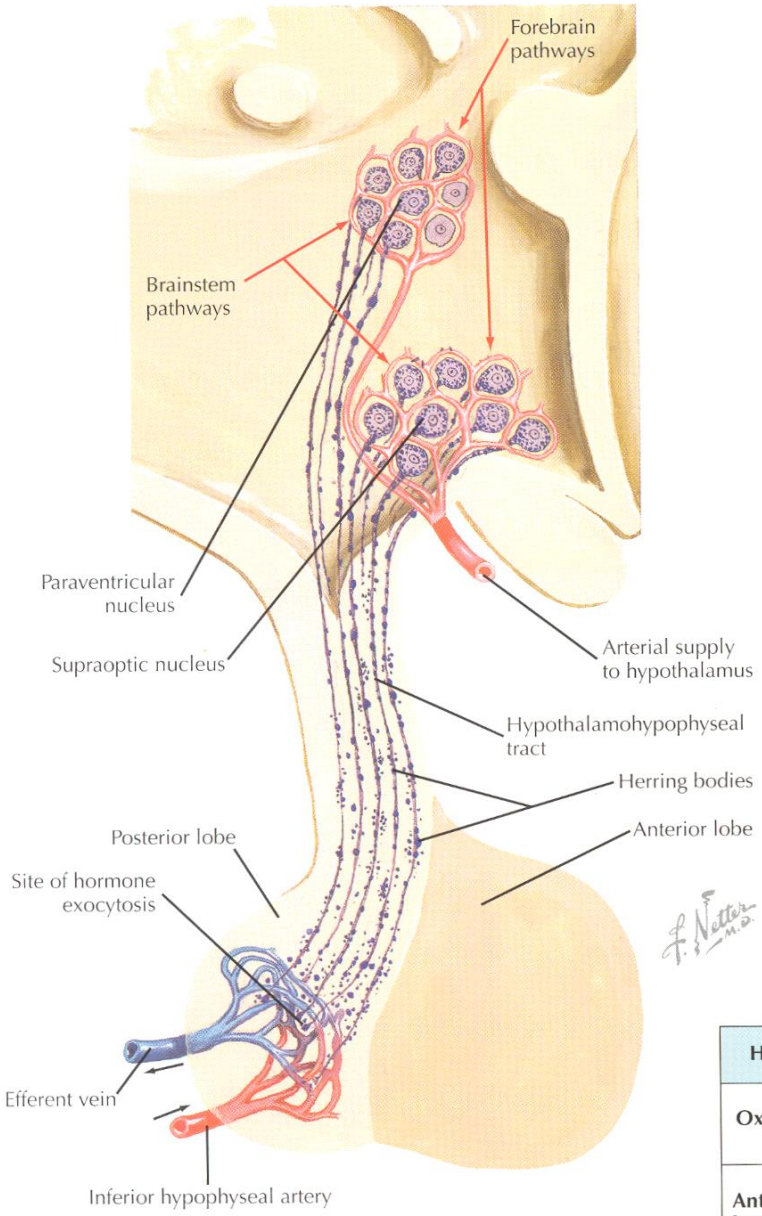
NEUROHYPOPHYSIS (POSTERIOR LOBE)

- **Nonmyelinated nerve fibers**
- axons of neurosecretory cells (c.a. 100 000) of hypothalamic nuclei (n. supraopticus and paraventricularis)
- **Pituicytes** (neuroglia)
- astrocyte-like (intermediate filamets, GFAP)
- local control of secretion from neuroscretory termini
- Herring bodies – neurosecretory endings – dilatation close to capillaries

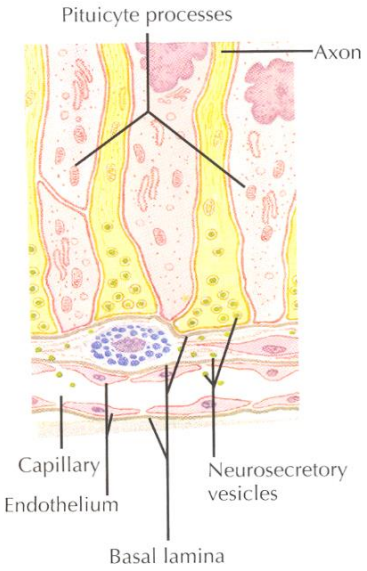
- **Hormones**
- oxytocin (OT)
- antidiuretic hormone (ADH, vasopresin)



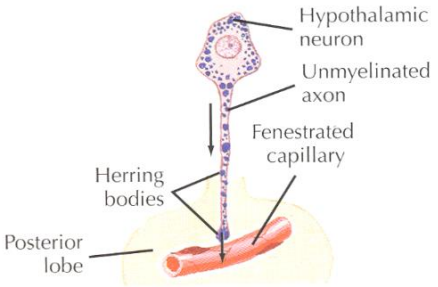
NEUROHYPOPHYSIS (POSTERIOR LOBE)



▼ Neurosecretory Ending (posterior pituitary).

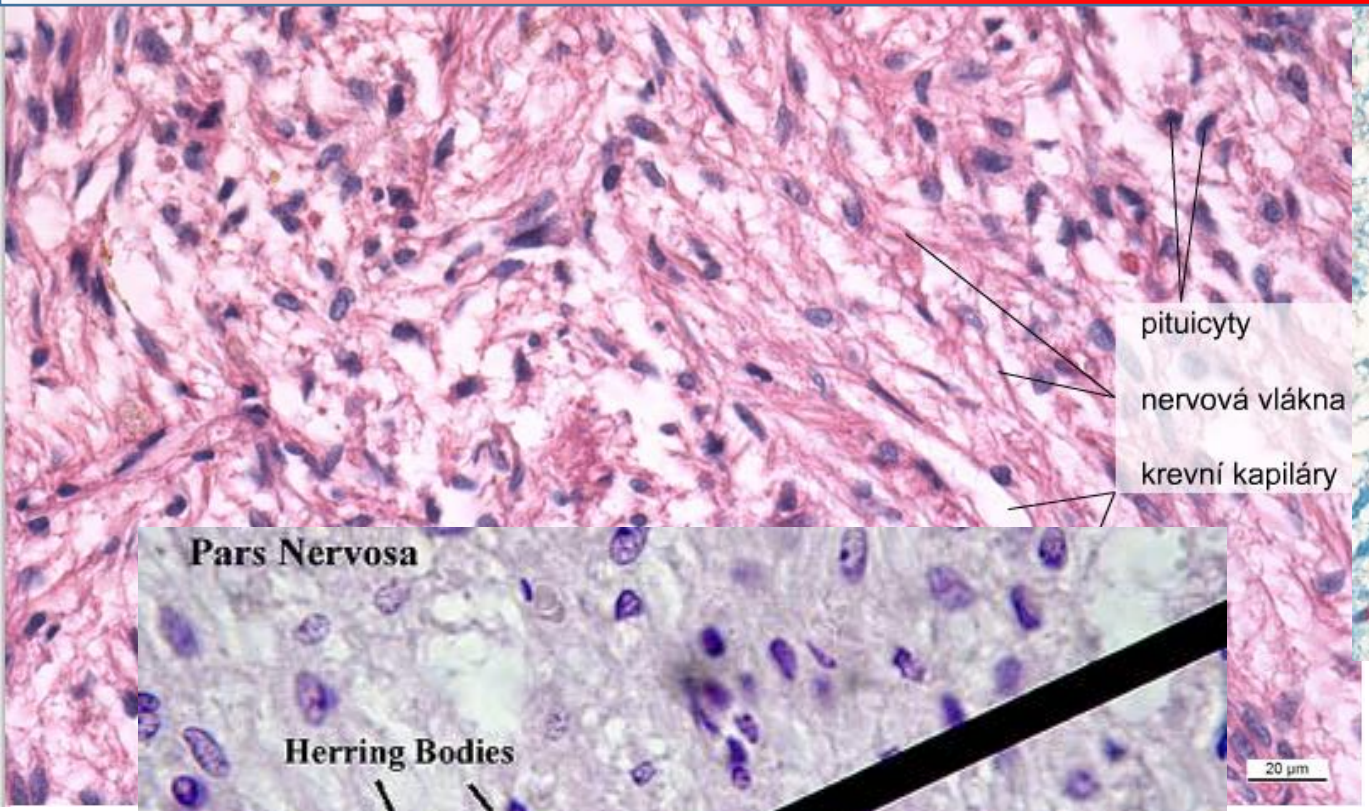


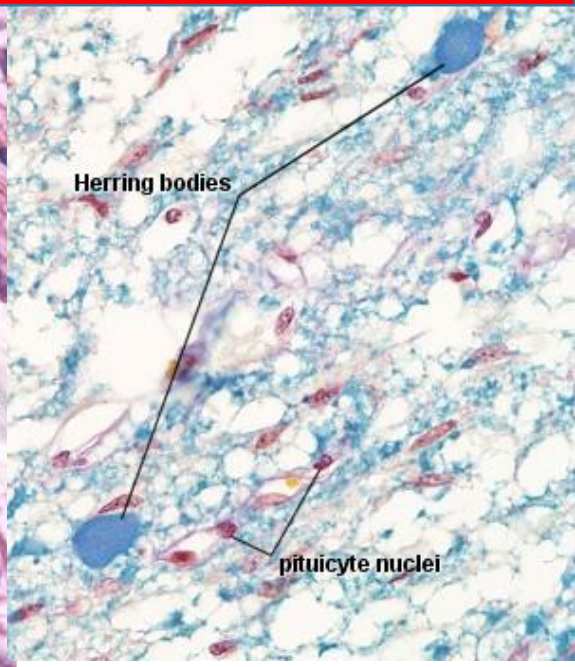
▼ Origin of ADH.

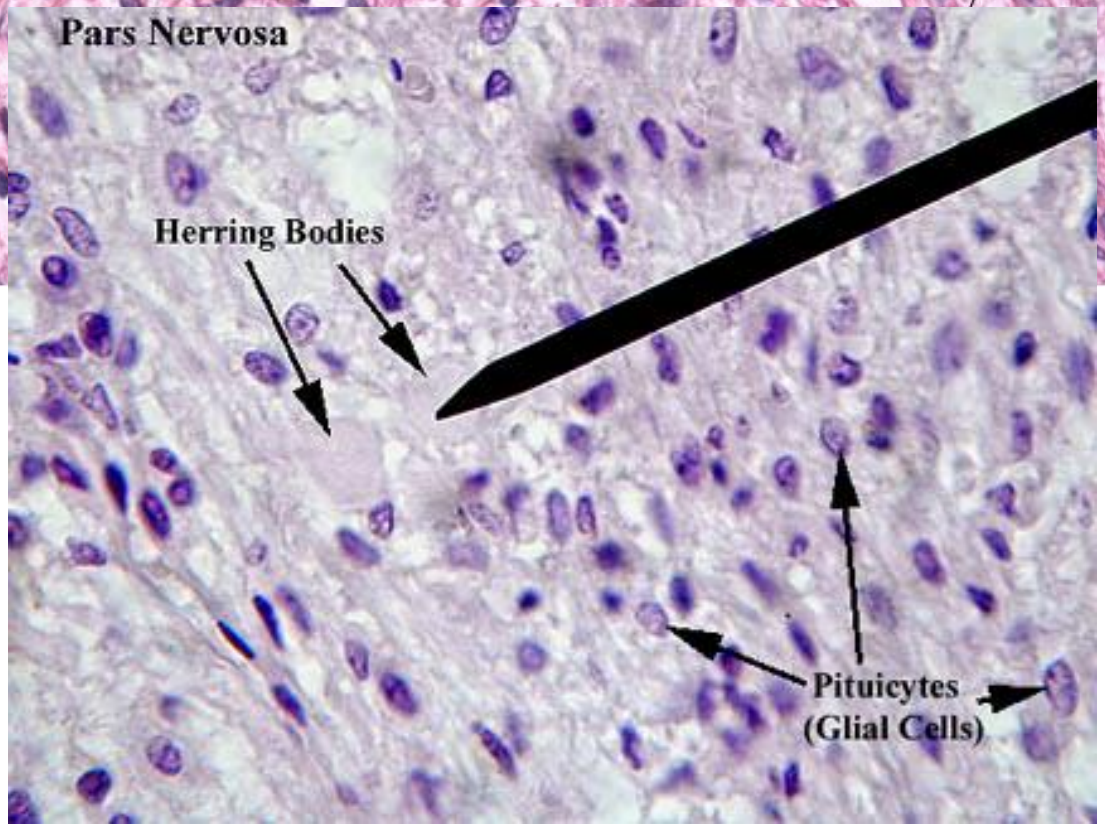


Hormone	Principal Action	Principal Nucleus of Origin
Oxytocin (OXY)	Uterine contraction, milk ejection	Paraventricular
Anti-diuretic hormone (ADH)	Water excretion in kidney, arteriolar constriction	Supraoptic

NEUROHYPOPHYSIS (POSTERIOR LOBE)

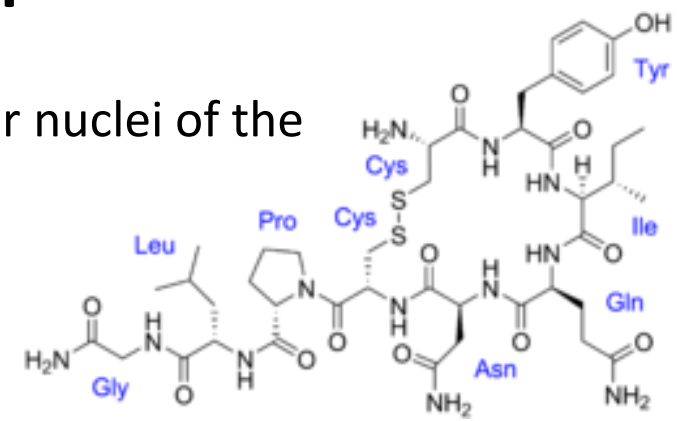






Oxytocin

- nonapeptide
- magno-cellular supraoptic and paraventricular nuclei of the hypothalamus
- OR - G-coupled receptor
- lactation reflex
- uterine contraction
- social behavior



Vasopressin

- nonapeptide
- retention of water
- effective in collecting duct and distal convoluted tubule (aquaporin translocations)
- blood pressure regulation by affecting t. media
- diabetes insipidus, hypernatremia, polyuremia

ADENOHYPOPHYSIS (ANTERIOR LOBE)

Chromophilic cells

Acidophils

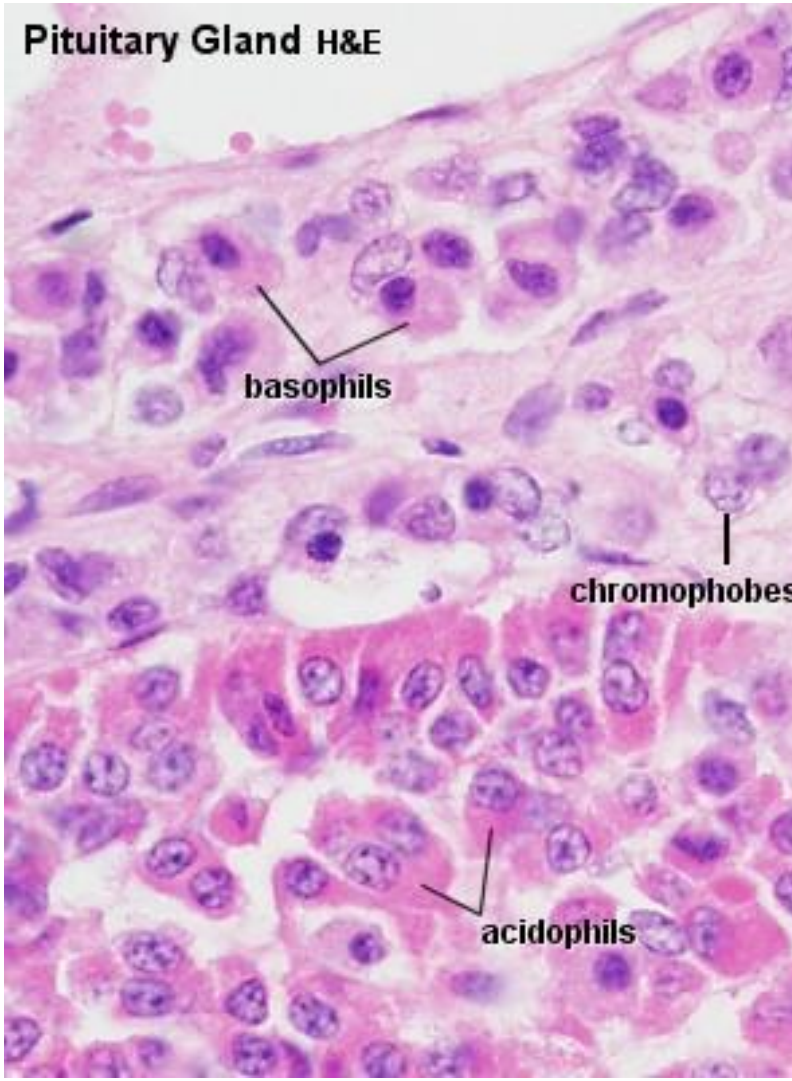
Nonglandotropic

- direct effect on target tissues

Basophils

Glandotropic

- regulation of other endocrine glands



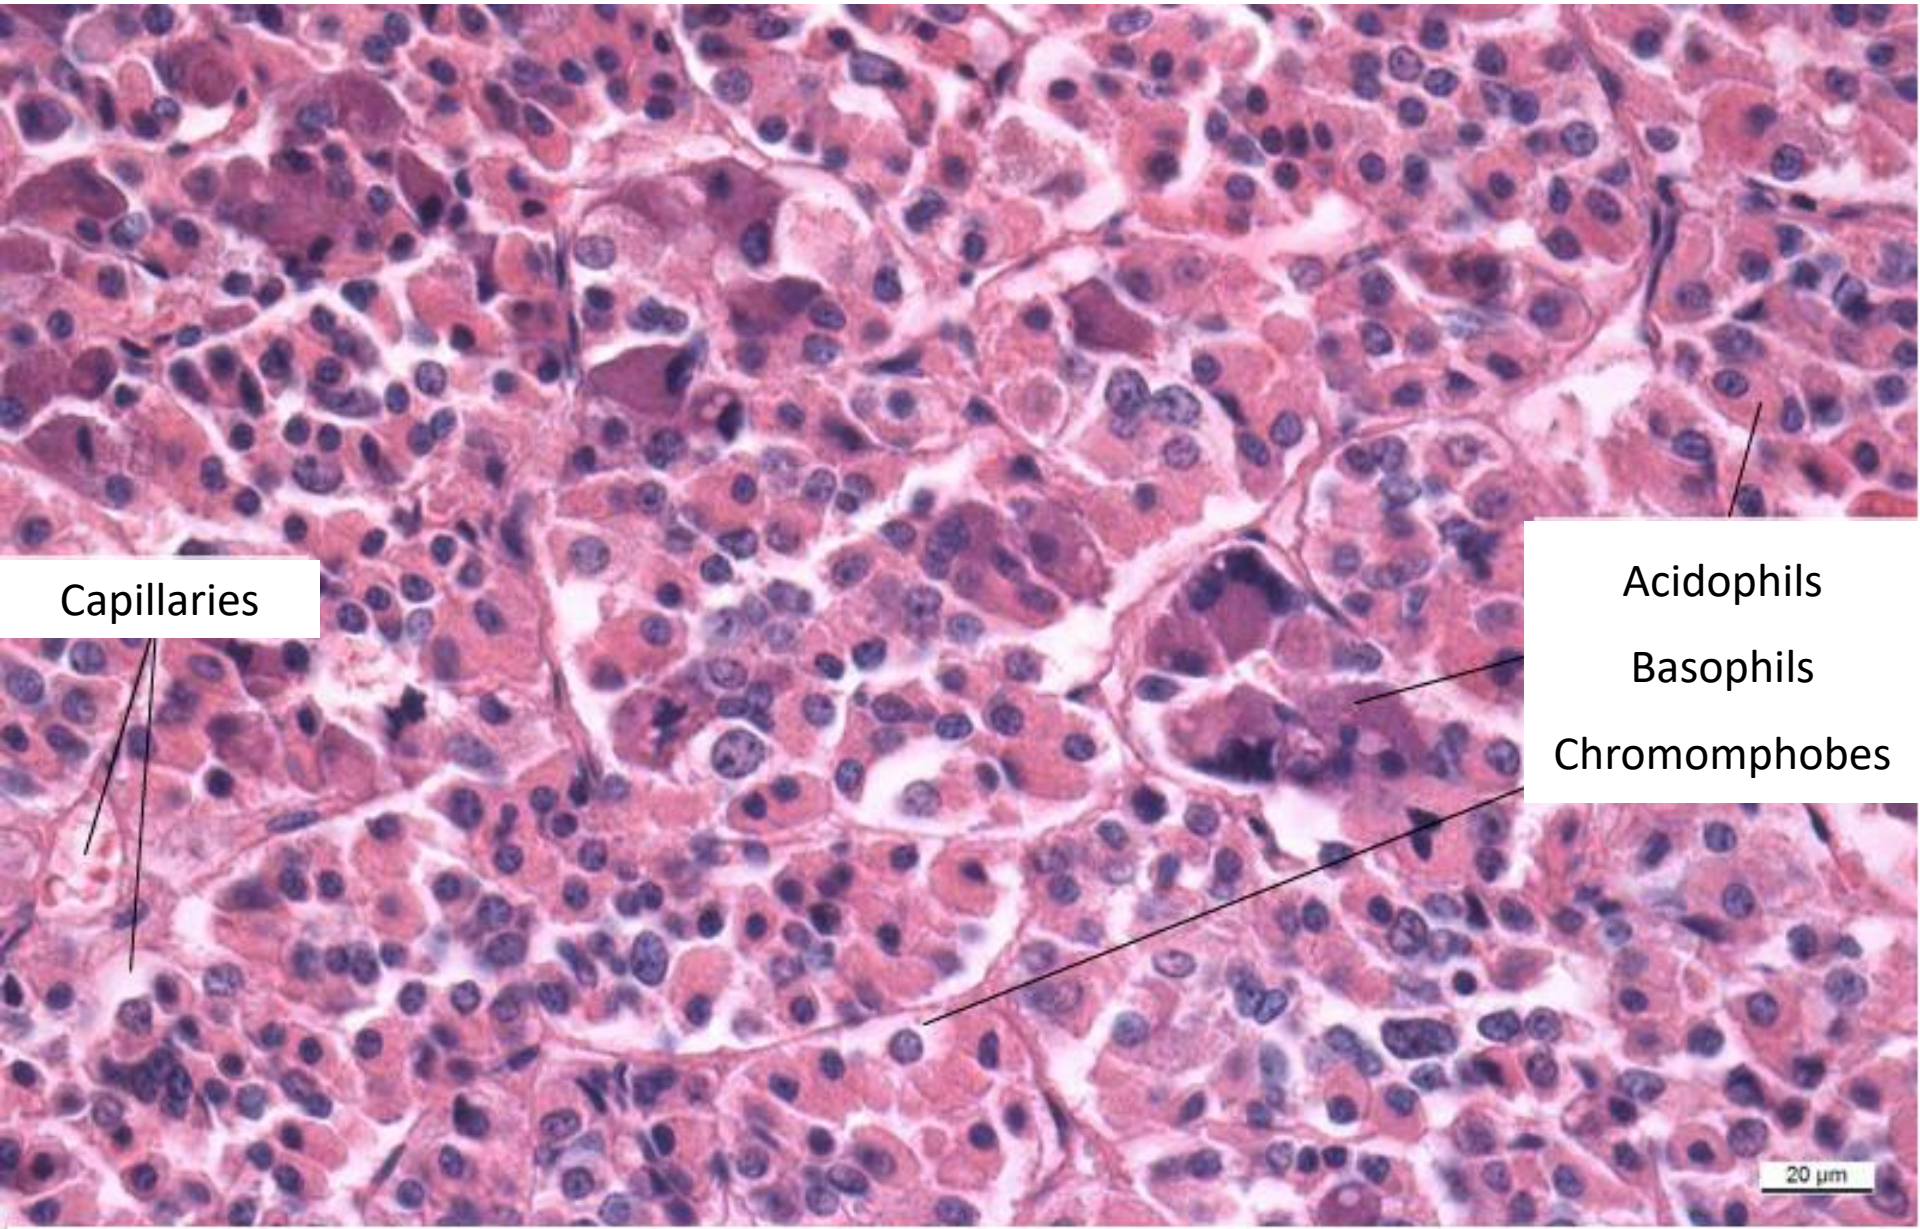
Chromophobic cells

- undifferentiated cells
- degranulated (“empty“) chromophils
- stromal cells

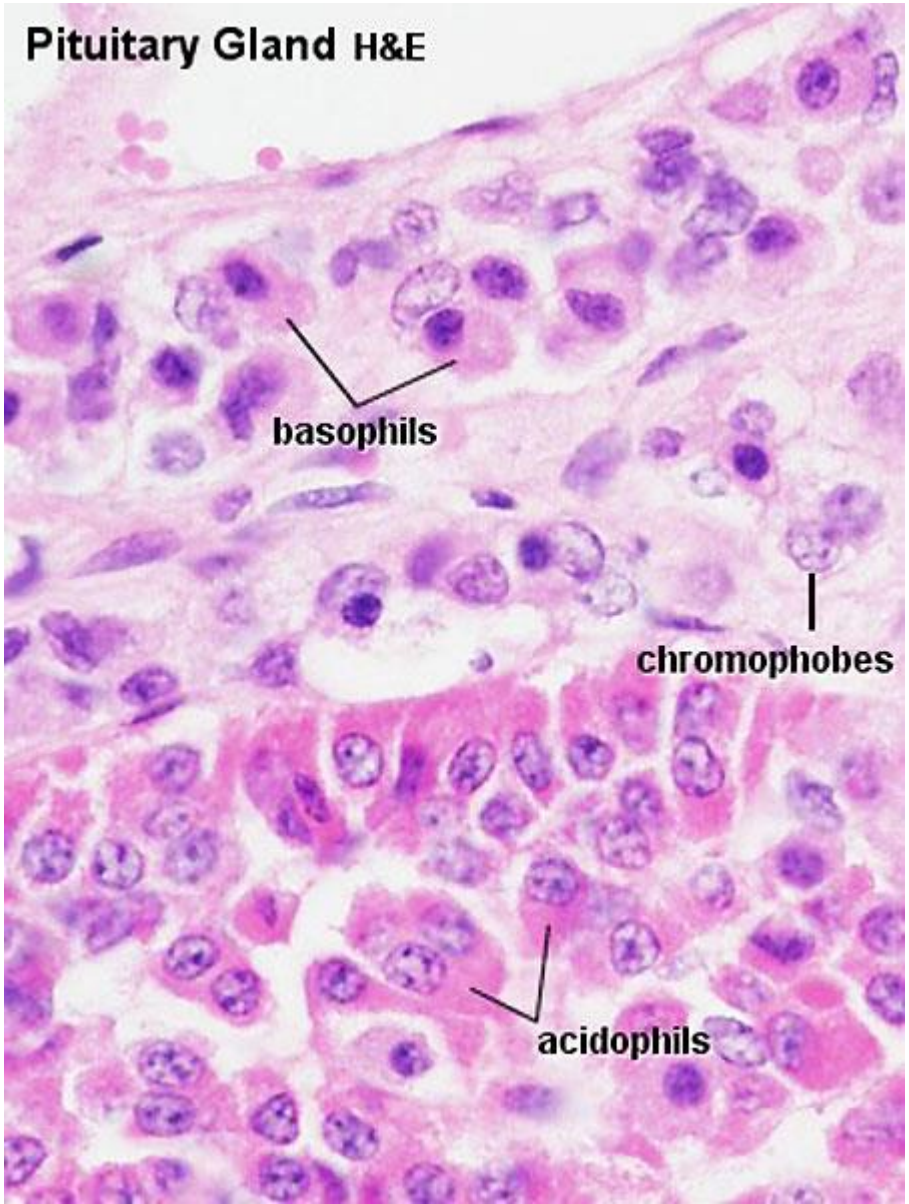
Folliculo-stellate cells (FS-cells)

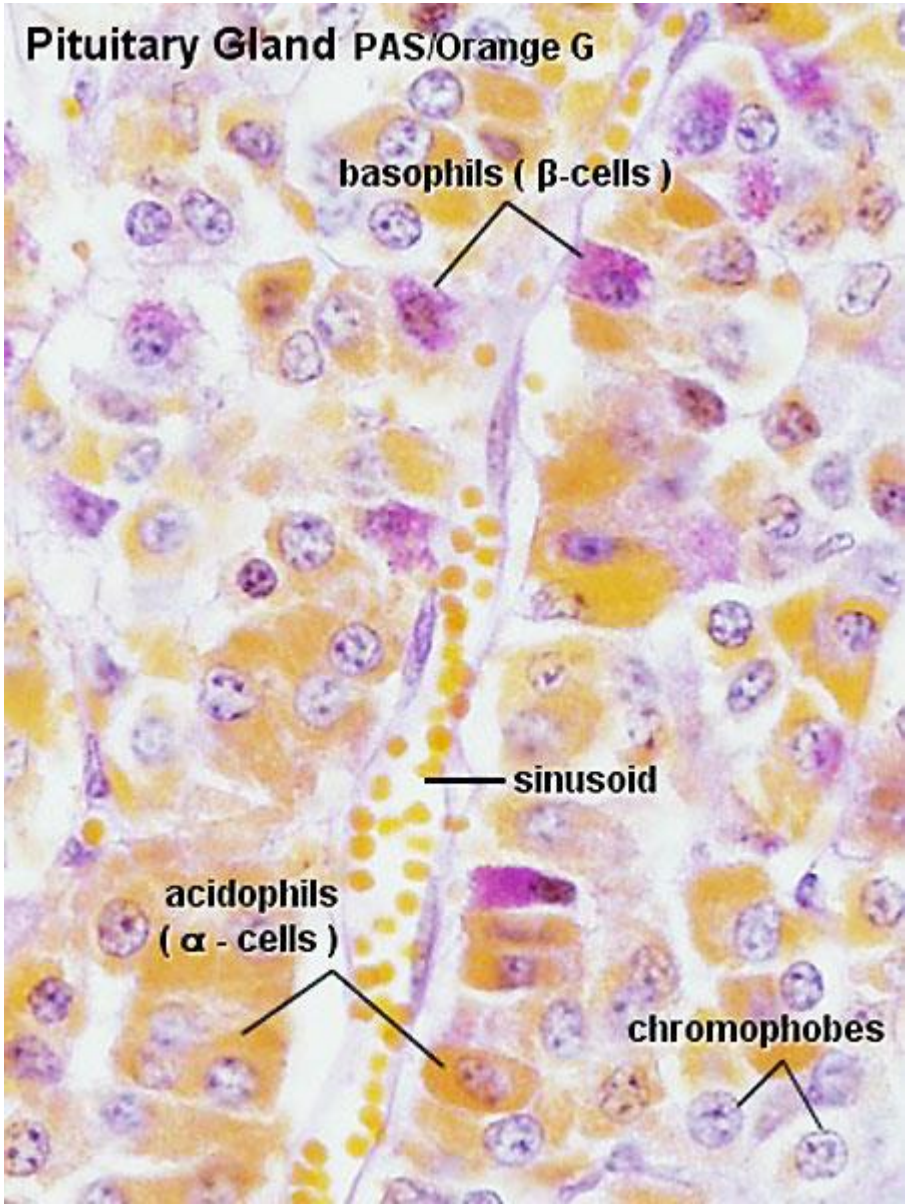
- unclear function, putative stem cells
- cytokine production

ADENOHYPOPHYSIS (ANTERIOR LOBE)



ADENOHYPOPHYSIS (ANTERIOR LOBE)

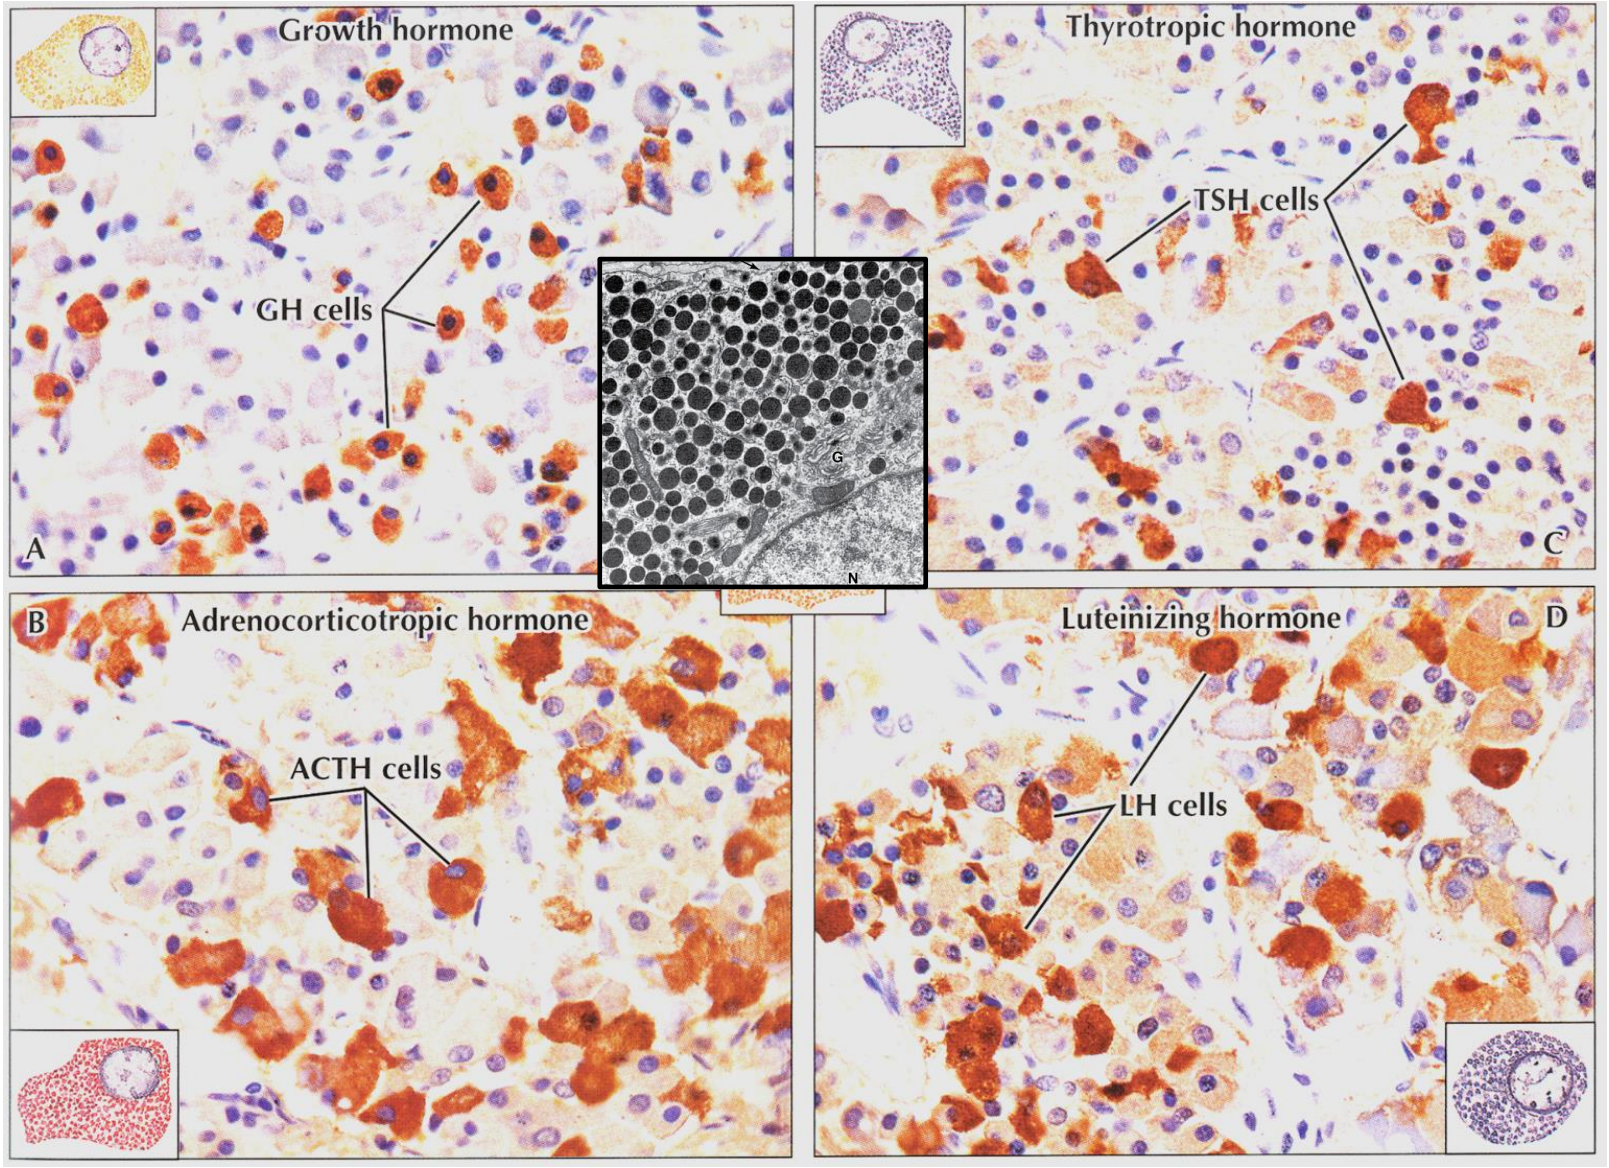




ADENOHYPOPHYSIS (ANTERIOR LOBE)

Acidophils producing GH

Basophils producing glandotropic hormones



REGULATION BY HYPOTHALAMIC HORMONES

- gonadoliberin → FSH a LH
- corticoliberin → cortikotropin
- thyreoliberin → thyreotropin
- *prolactin releasing hormone (?) → prolactin*
- somatoliberin → somatotropin
- follistatin ⊣ FSH a LH
- somatostatin ⊣ somatotropin, TSH
- dopamin ⊣ prolactin

”FLAT PEG”

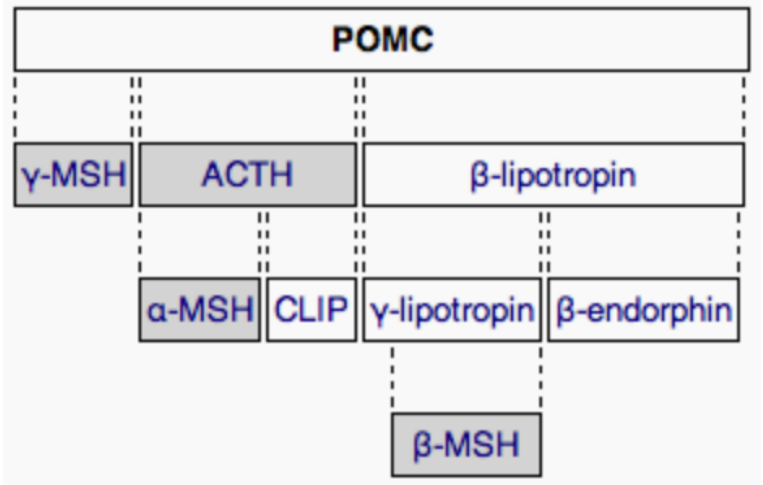
- FSH
- LH
- ACTH
- TSH
- Prolactin
- Endorhins
- Growth hormone

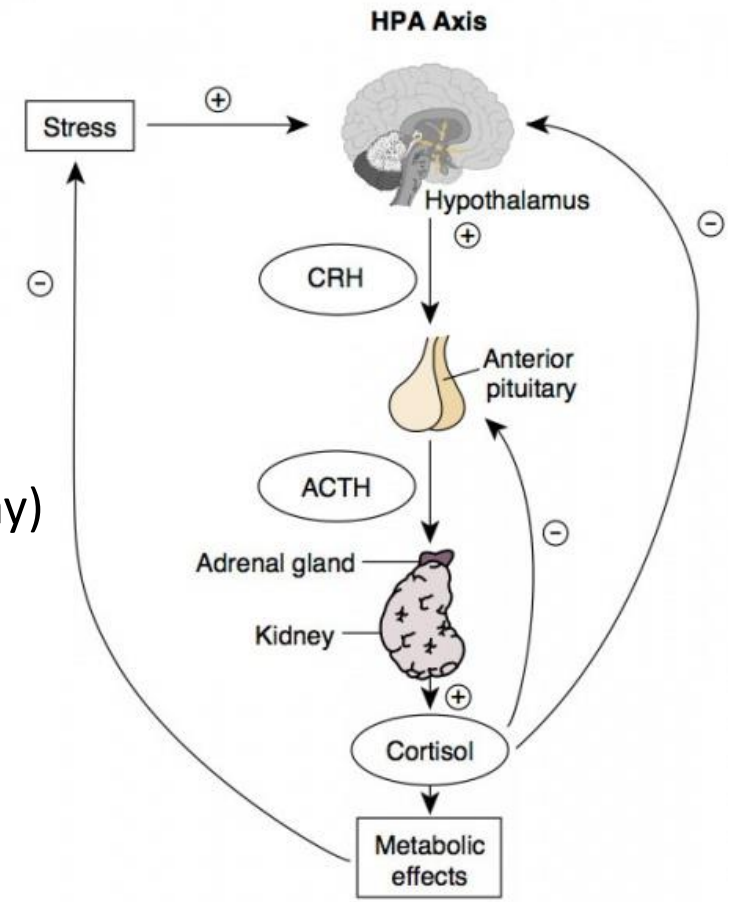
Pro-opio-melanocortin (POMC)

rough ER → pre-prohormon
produced by various tissues

cleavage to

- ACTH (target: adrenal cortex → cortisol)
- MSH (target: melanocytes - mostly in paracrine way)
- lipotropin (lipolysis, steroidogenesis)
- endorphins





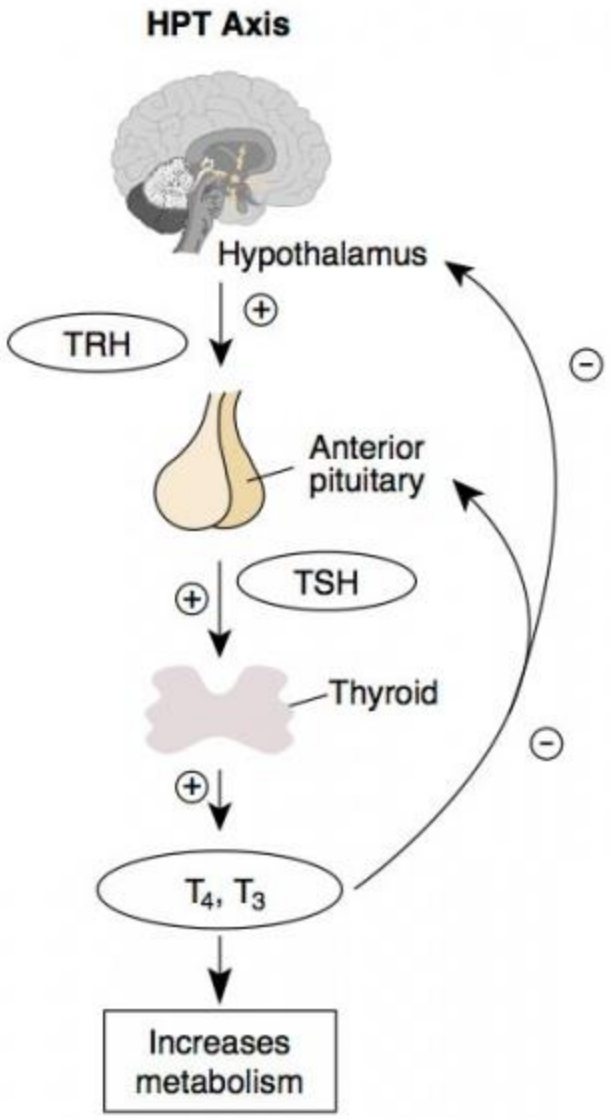
FSH (folitropin), LH (lutropin)

- gonadotropic cells of adenohypophysis stimulated by GnRH
- glycoproteins, 30kDa
- heterodimer, two noncovalent bound subunits (**a/α** - common for - LH, FSH, TSH, hCG, **b/β** - specific)
- FSH receptor (testes, ovarium, uterus) G-protein coupled receptor
- glycosylated extracellular domain of 11 leucine rich repeats specific to FSH
- after ligand binding, activation of G-protein and cAMP signaling
- alternative activation of MAPK cascade (ERK)
- complex signaling response (prostaglandins, PLPc, NO)

	FSH	LH
ovarium	follicle development (FSHR in m. *granulosa cells*)	ovulation, development of corpus luteum, production of androgens in thecal cells
testes	spermatogenesis, FSHR in Sertoli cells	production of testosterone in Leydig cells (expression of LHR)
extragonadal	FSHR in secretory endometrium of luteal phase uterus (endometrial functions, embryo-endometrial interactions)	uterus, seminal vesicles, prostate, skin... unknown function

TSH, thyrotropin

- thyrotropic cells of adenohypophysis stimulated by TRH
- production of T4 (thyroxin) a T3 (triiodothyronin) by thyroid gland
- glycoprotein, 28,5 kDa, heterodimer, two noncovalent bound subunits (a, b)
- TSH receptor on thyroid follicular cells
- G-protein signaling → adenylylcyklase → cAMP
- cAMP → iodide channels (pendrin), transcription of thyreoglobulin, endo- and exocytic pathway
- cross-reactivity with hCG → in pregnancy - alterations in synthesis of thyroid hormones (**gestational hyperthyroidism**)

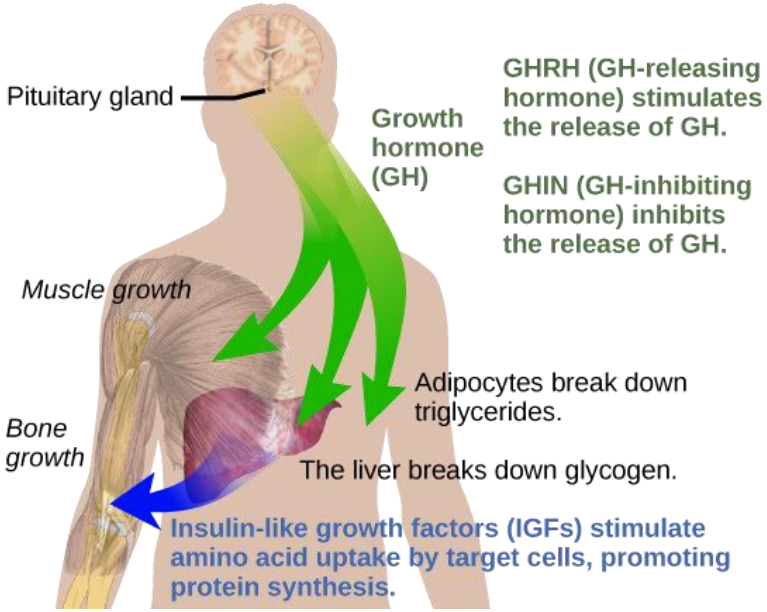


GH, somatotropin, growth hormone

- somatotropic cells of adenohypophysis stimulated by GHRH (somatocrinin)
- several molecular isoforms (alternative splicing), ~20-24 kDa
- broad spectrum of target cell types and physiological circuits
- transcription of DNA, translation of RNA, proteosynthesis
- lipid use (fatty acid mobilization, conversion to acetyl-CoA)
- inhibition of direct use of glucose, stimulation of glukoneogenesis
- transmembrane transport of aminoacids
- proteosynthesis in chondrocytes and osteoblasts, proliferation, osteogenesis
- GHR in various tissues
- RTK, JAK-STAT

- somatomedins
- small proteins (MW 7,5 kDa), IGF-like
- produced by liver

- various pathologies associated with GH



ADENOHYPOPHYSIS – HORMONES

Table 2. Nonclassical Anterior Pituitary Substances and Cell(s) of Origin

Substances	*Cell Types*
PEPTIDES	
ACTIVIN B, INHIBIN, FOLLISTATIN	F,G
ALDOSTERONE STIMULATING FACTOR	UN
ANGIOTENSIN II (ANGIOTENSINOGEN, ANGIOTENSIN I CONVERTING ENZYME, CATHEPSIN B, RENIN)	C,G,L,S
ATRIAL NATURETIC PEPTIDE	G
CORTICOTROPIN-RELEASING HORMONE-BINDING PROTEIN	C
DYNORPHIN	G
GALANIN	L,S,T
GAWK (CHROMOGRANIN B)	G
GROWTH HORMONE RELEASING HORMONE	UN
HISTIDYL PROLINE DIKETOPIPERAZINE	UN
MOTILIN	S
NEUROMEDIN B	T
NEUROMEDIN U	C
NEUROPEPTIDE Y	T
NEUROTENSIN	UN
PROTEIN 7B2	G,T
SOMATOSTATIN 28	UN
SUBSTANCE P (SUBSTANCE K)	G,L,T
THYROTROPIN RELEASING HORMONE	G,L,S,T
VASOACTIVE INTESTINAL POLTPEPTIDE	G,L,T
GROWTH FACTORS	
BASIC FIBROBLAST GROWTH FACTOR	C,F
CHONDROCYTE GROWTH FACTOR	UN
EPIDERMAL GROWTH FACTOR	G,T
INSULIN-LIKE GROWTH FACTOR I	S,F
NERVE GROWTH FACTOR	UN
PITUITARY CYTOTROPIC FACTOR	UN
TRANSFORMING GROWTH FACTOR ALPHA	L,S,G
VASCULAR ENDOTHELIAL GROWTH FACTOR	F
CYTOKINES	
INTERLEUKIN-1 BETA	T
INTERLEUKIN-6	F
LEUKEMIA INHIBITORY FACTOR	C,F
NEUROTRANSMITTERS	
ACETYLCHOLINE	C,L
NITRIC OXIDE	F

C = corticotroph, F = folliculostellate cell, G = gonadotroph, L = lactotroph, S = somatotroph, T = thyrotroph, UN = unknown

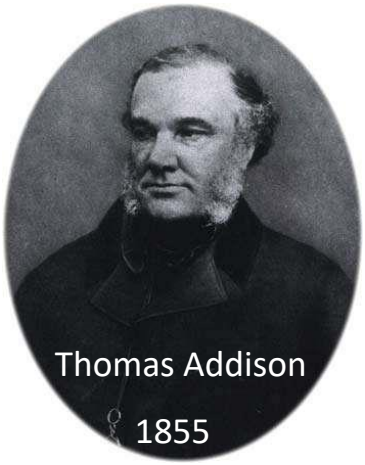
Hypophyseal tumors

- compression of surrounding structures (e.g. optic chiasma)

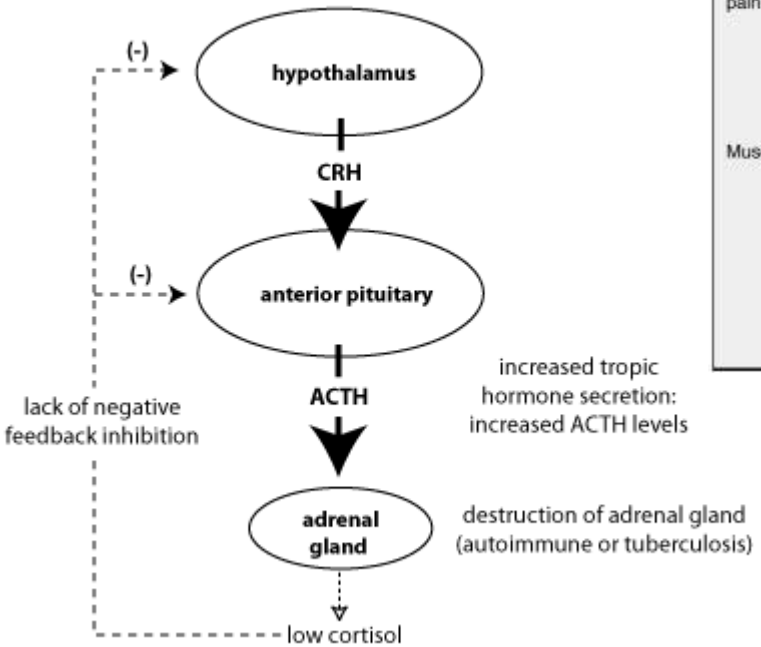
- hyperfunction of endocrine component

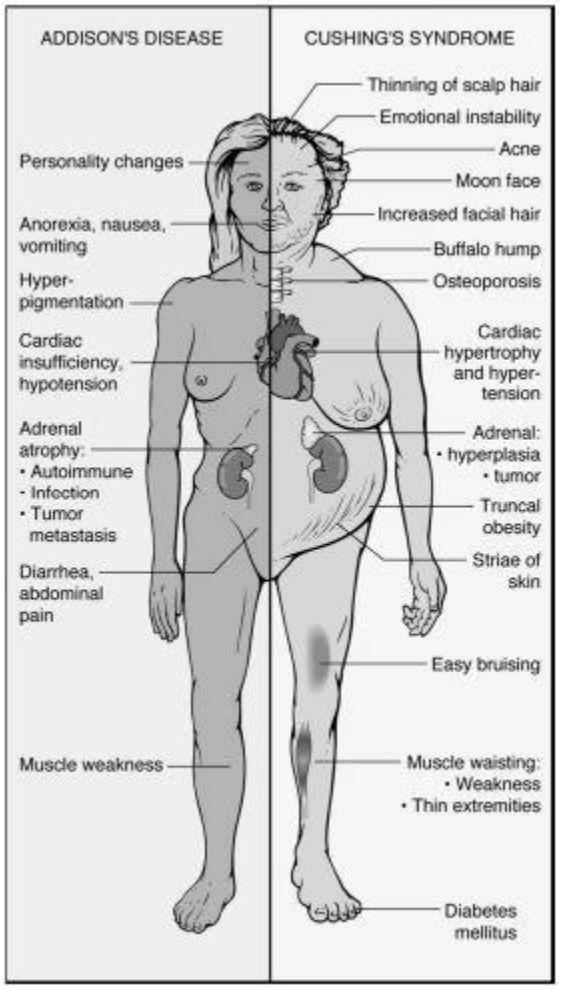
  - prolactinoma - galactorrhea
  - hypogonadism (alterations of GnRH)
  - gigantism - acromegaly
  - nanism

Corticotrophs hypofunction

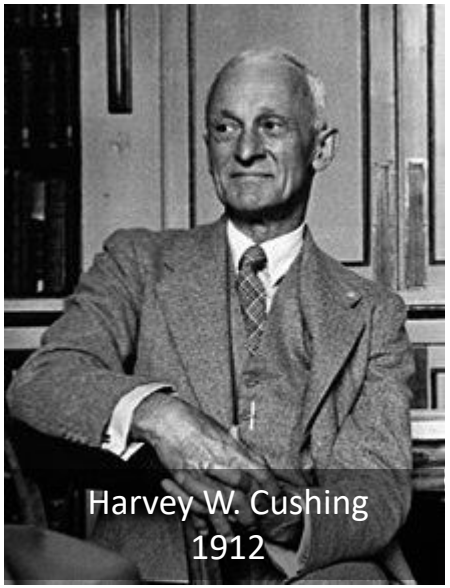


Addison's Disease

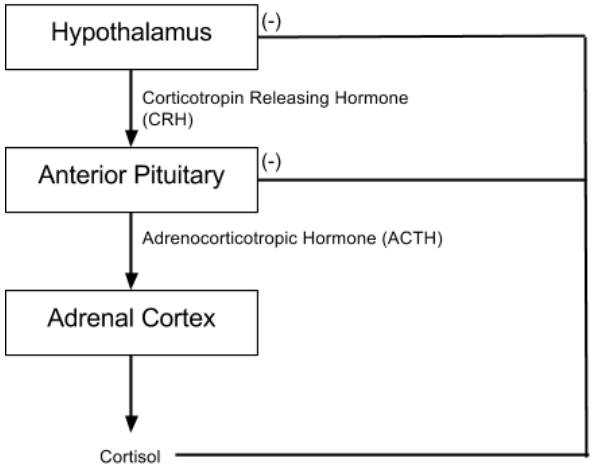




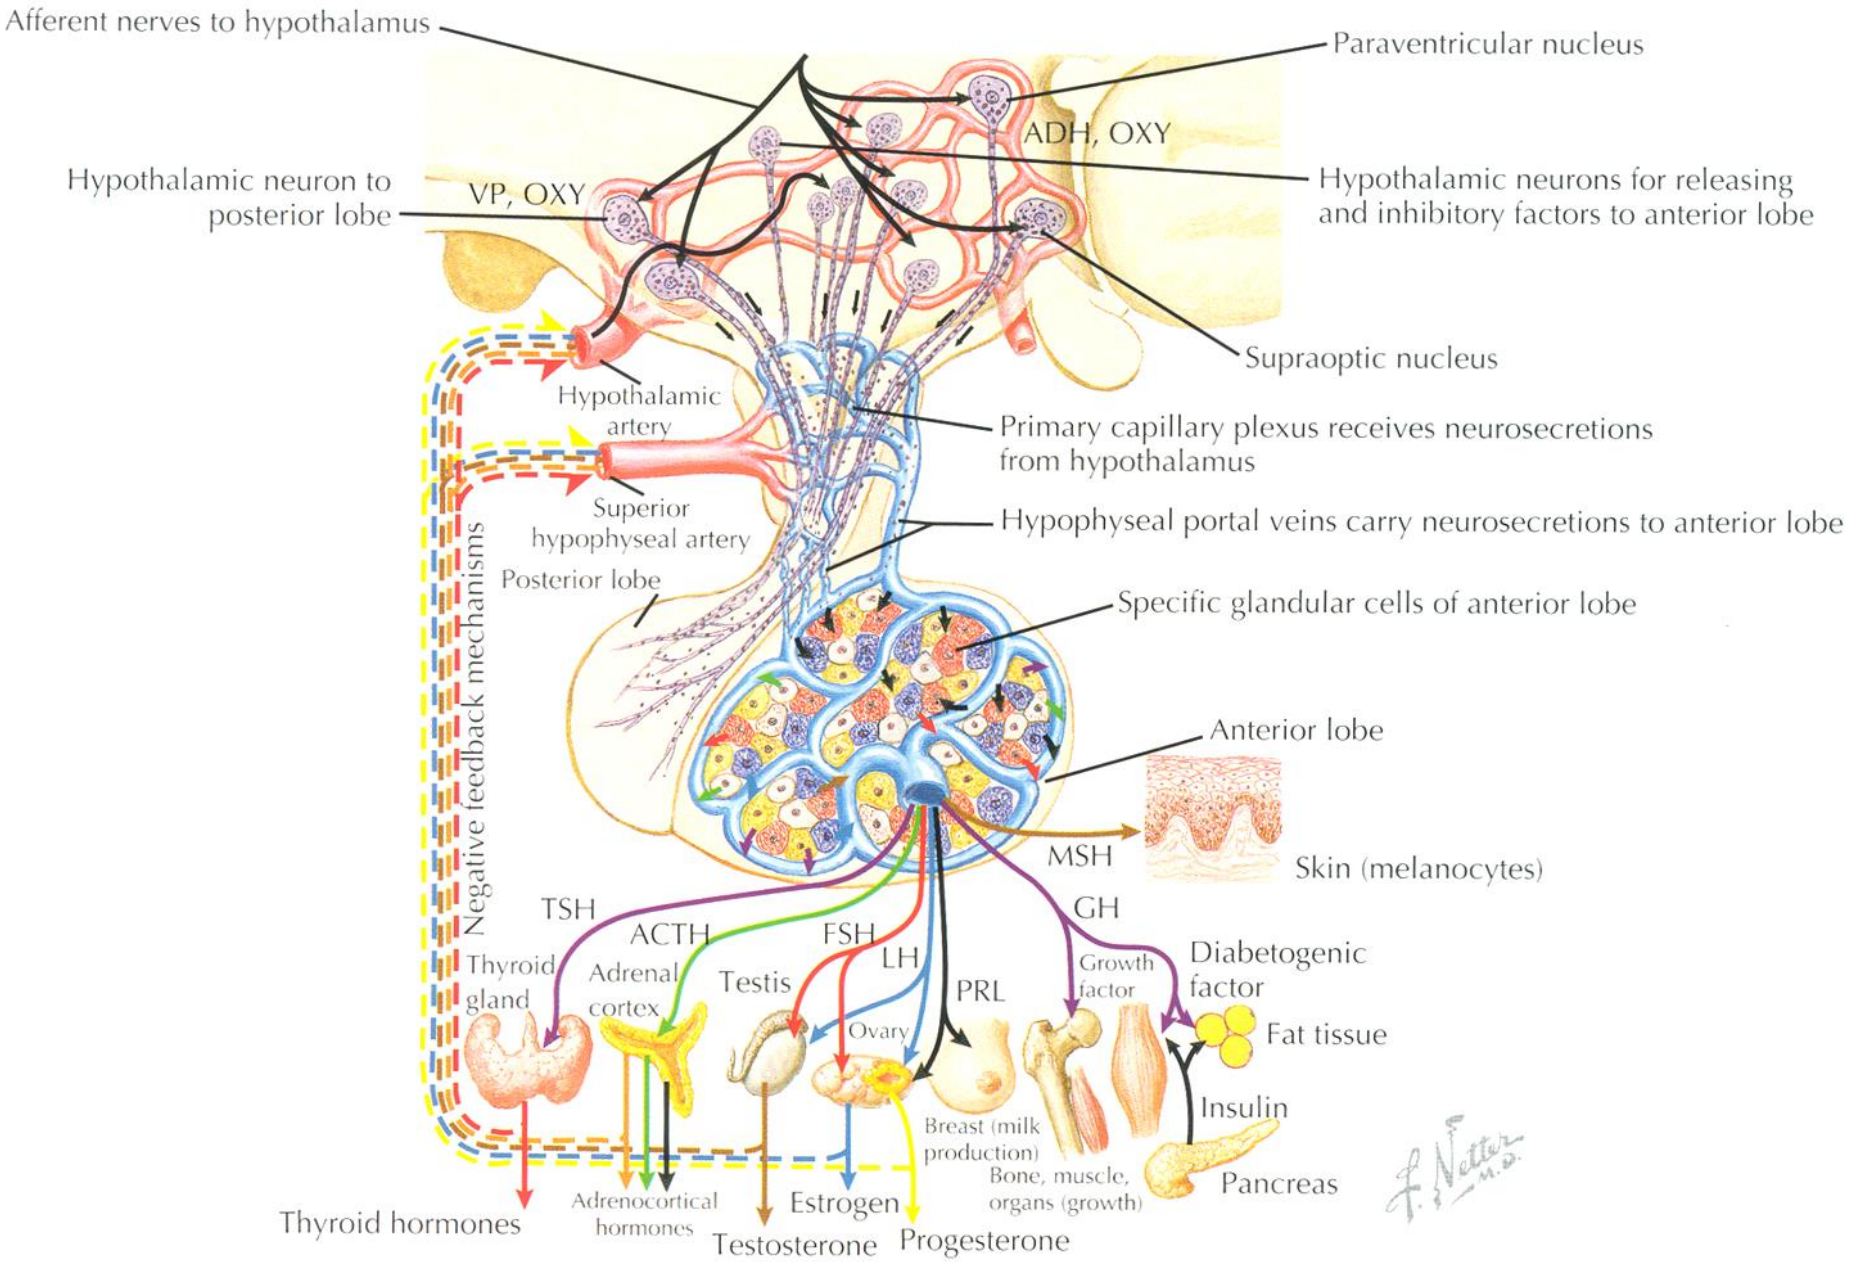
Corticotrophs hyperfunction



Cushing's syndrome

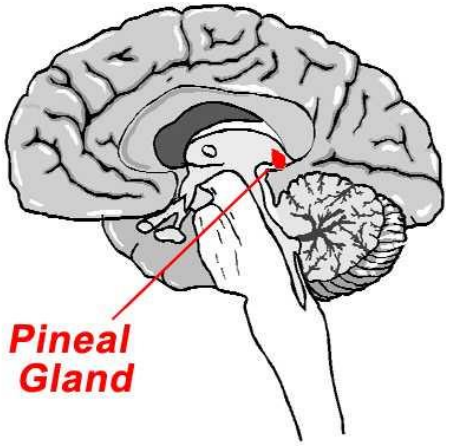


PITUITARY GLAND SUMMARY

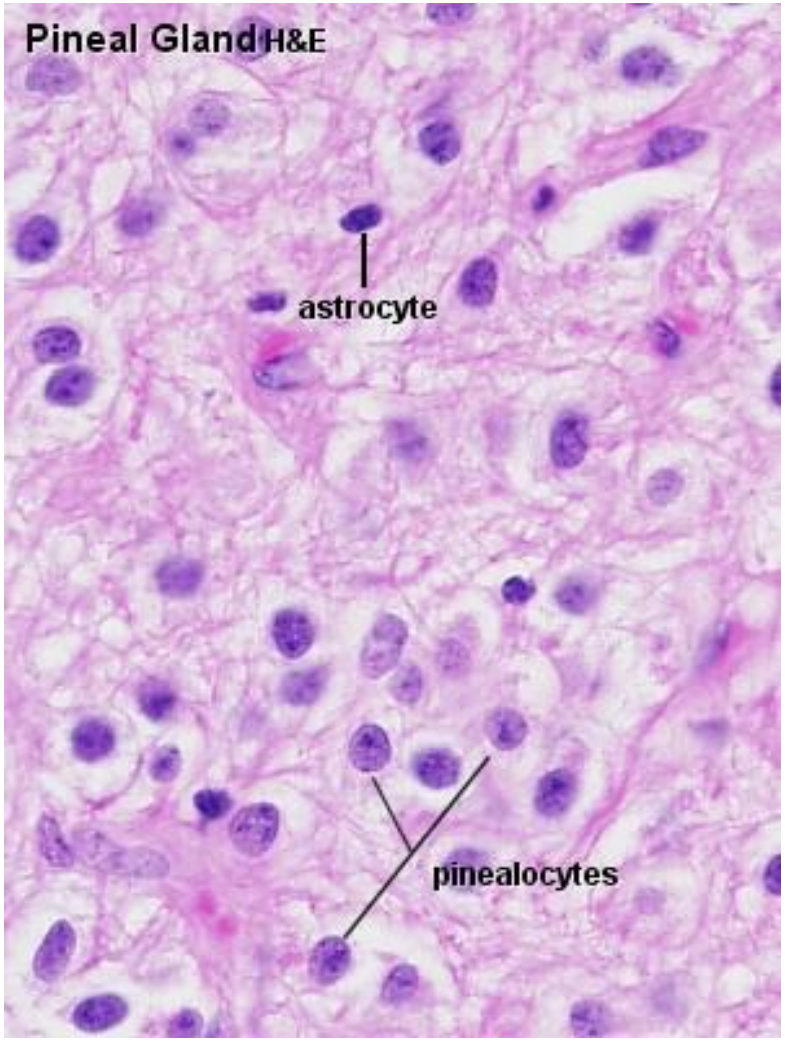


Anatomy			Microscopic anatomy			Hormones and target tissues		
Anterior lobe (adenohypophysis)	pars distalis	superior hypophyseal arteries → primary capillary plexus at eminentia mediana → hypophyseal portal veins → secondary capillary plexus in adenohypophysis	trabecular epithelium in cords and clusters, reticular fibers; agranular folliculo-stellate cells with so far unclear function					
			chromophobes	undifferentiated cells degranulated chromophilic cells stromal cells		lack hormonal activity		
			chromophils	**acidophilic** nonglandotropic	mammotropic cells	small polypeptides	dopamin (PIH) ⊥ PRF (?) → prolactin	mammary gland in gravidity and lactations
					somatotropic cells		somatostatin (GHIH) ⊥ GHRH → **somatotropin** (STH)	directly liver and growth plates other tissues via somatomedins
	pars tuberalis			**basophilic** glandotropic	corticotropic cells	glycoproteins	CRH → **ACTH**, **MSH**	adrenal cortex → cortisol melanocytes
					thyrotropic cells		TRH → **TSH**	thyroid → thyroxin, T3
	pars intermedia	Rathke's cysts			gonadotropic cells		GnRH → **FSH** (ICSH), **LH**	gonads → androgens, estrogens, progesterone
Posterior lobe (neurohypophysis)	eminentia mediana → infundibulum	inferior hypophyseal arteries → capillary plexus in neurohypohysis	nonmyelinated **axons** of hypothalamic neurons n. supraopticus, n. paraventricularis (tractus hypothalamohypophysialis), **pituicytes**			small peptides	**ADH**	tubulus reuniens, ductus colligens t.media of vessels
	pars nervosa						**oxytocin**	myometrium of uterus during gravidity myoepithelium of lactating mammary gland

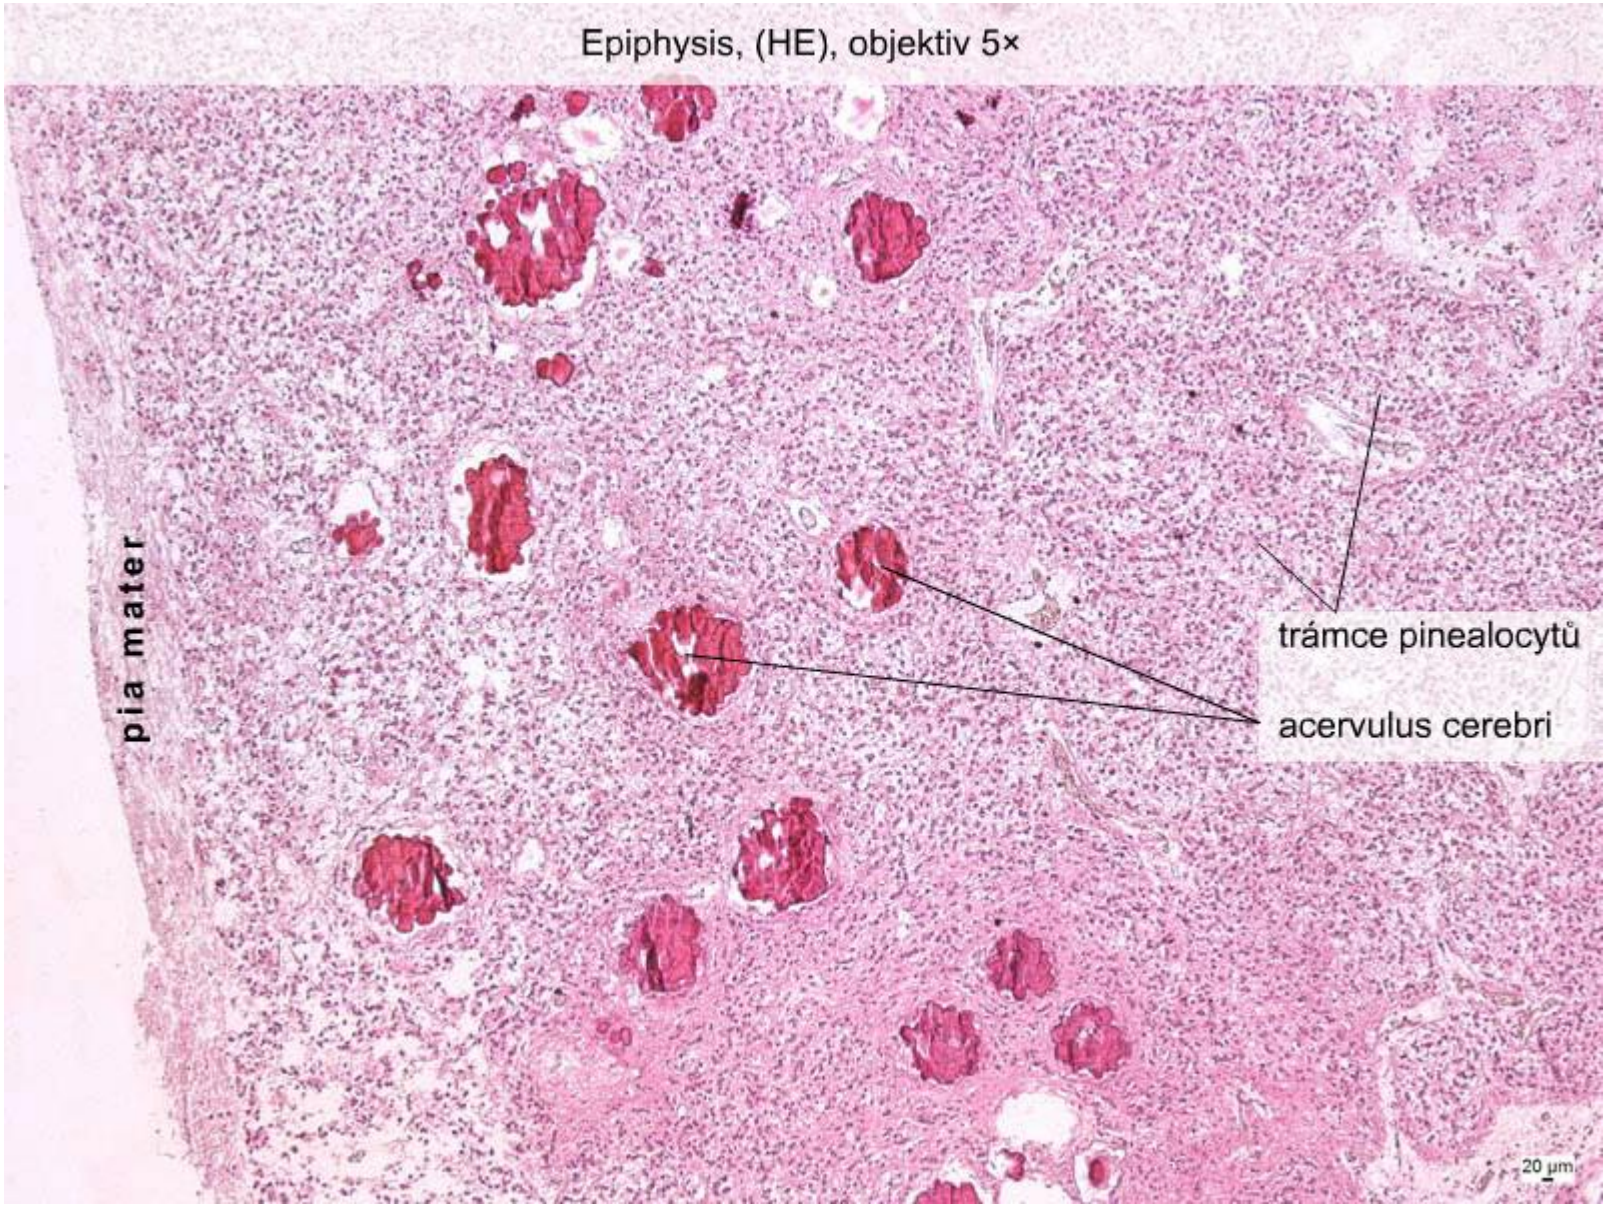
EPIPHYSIS (*C. PINEALE*)



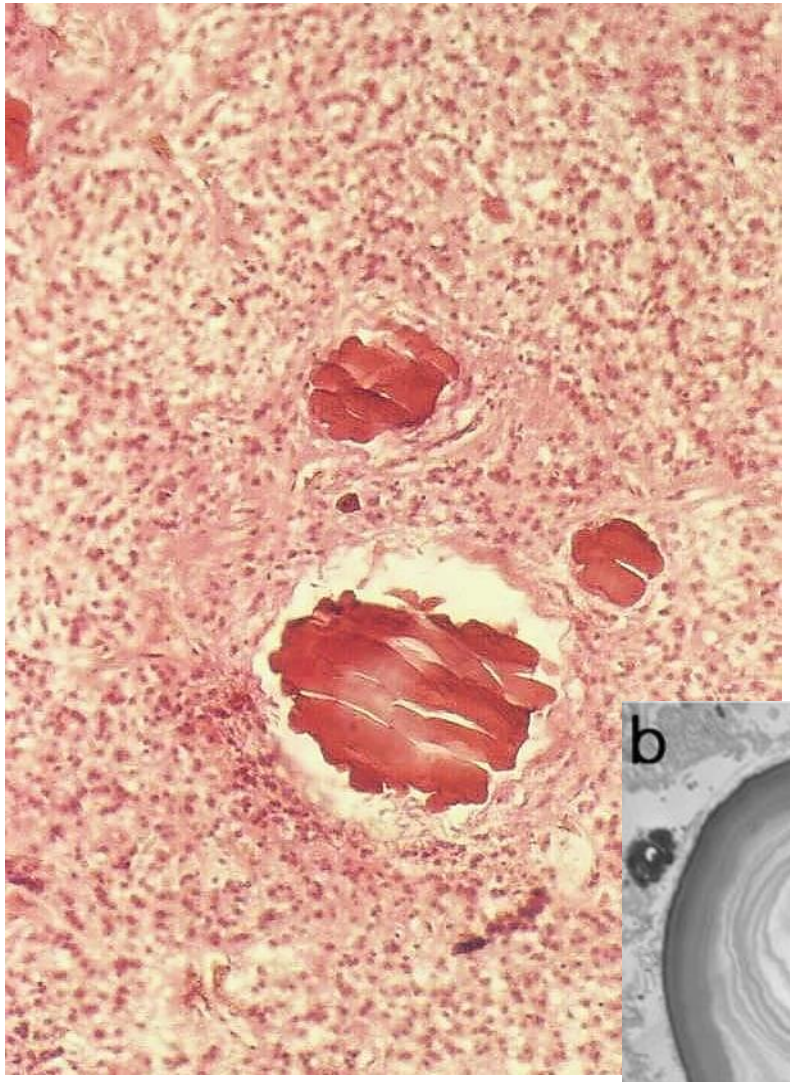
- epithalamus
- c.t. capsule continuous to pia mater
- thin c.t. septa
- non-myelinated nerve fibers
- **pinealocytes** (95%, large, pale, round nuclei)
- interstitial neuroglia (astrocytes, dark, elongated nuclei)
- *acervulus cerebri*
- melatonin

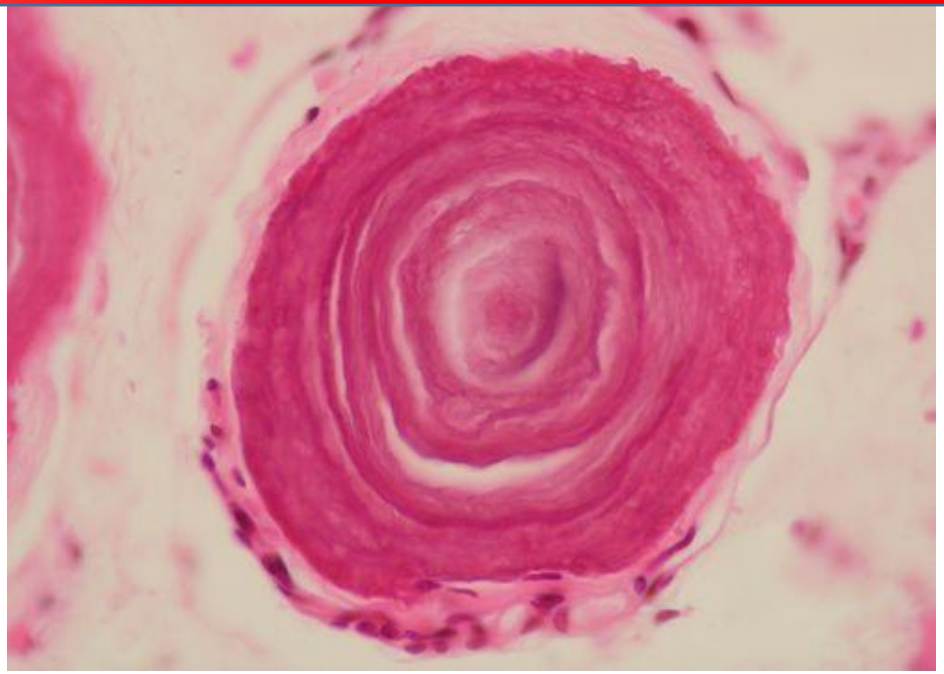


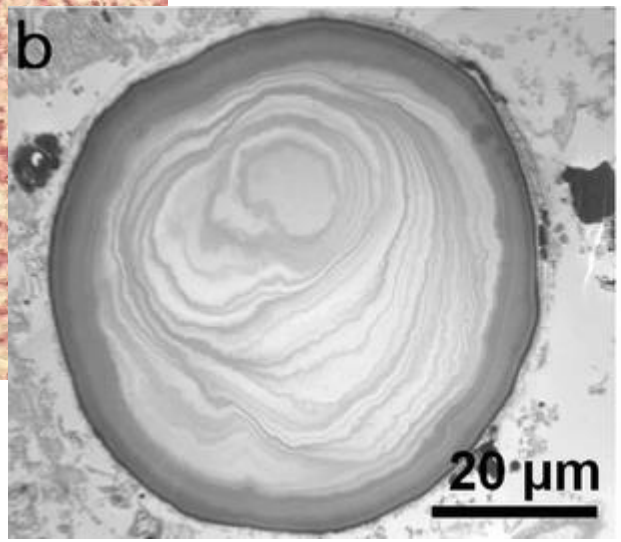
EPIPHYSIS (*C. PINEALE*)

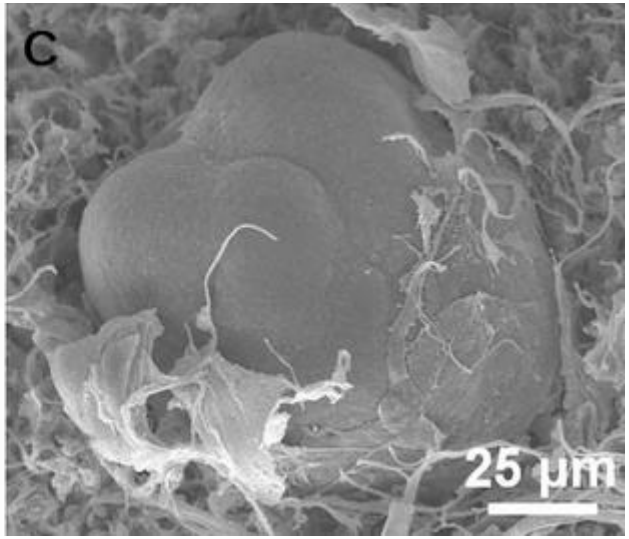


EPIPHYSIS - *ACERVULUS CEREBRI*





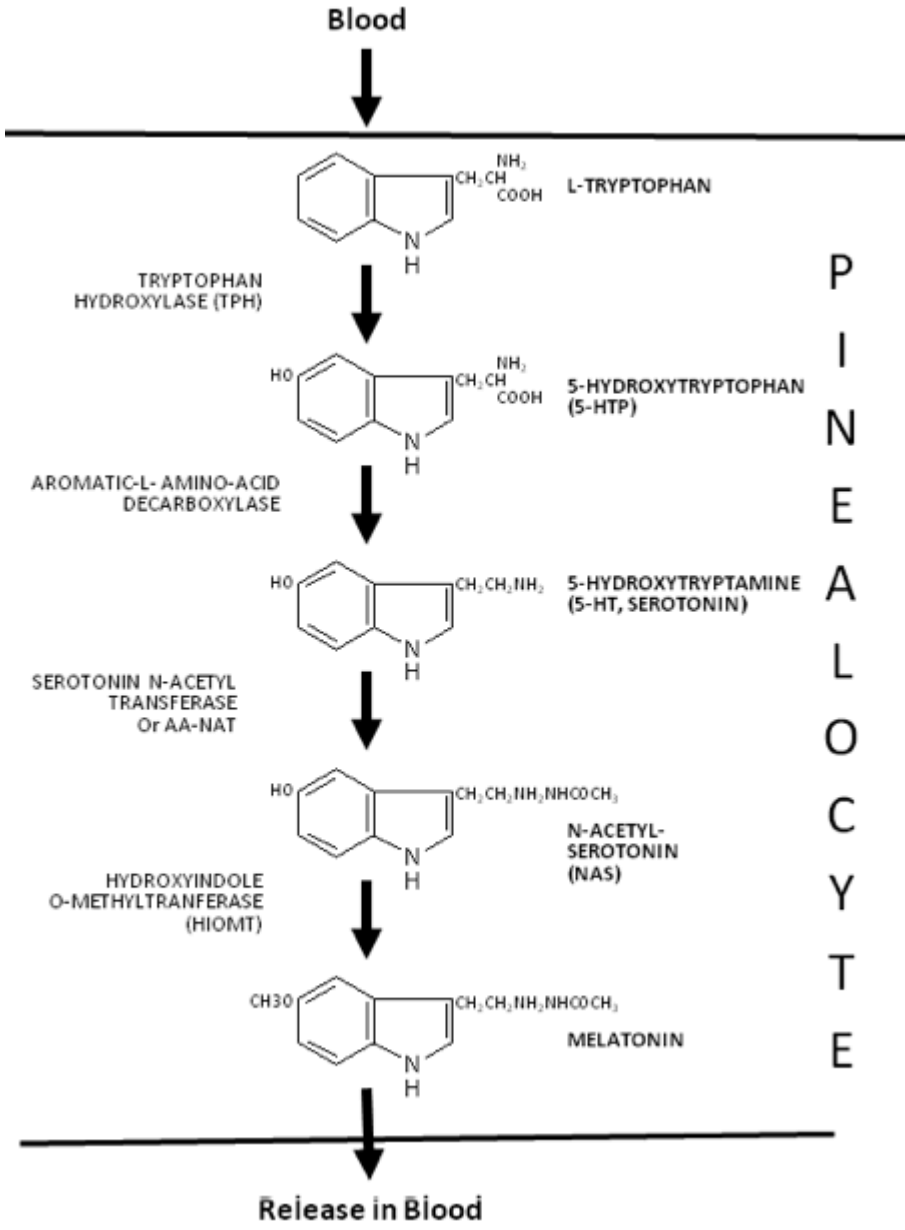




EPIPHYSIS (*C. PINEALE*)

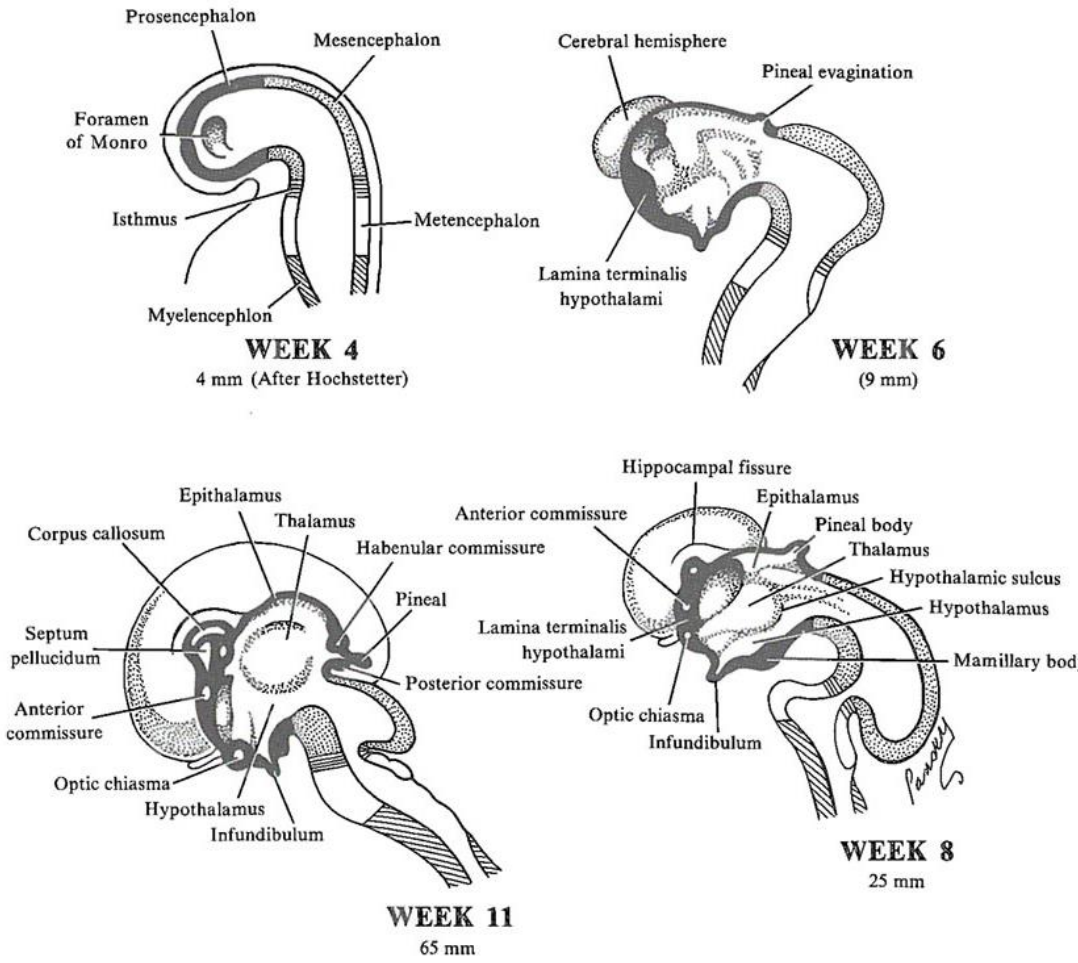
- **pinealocytes**

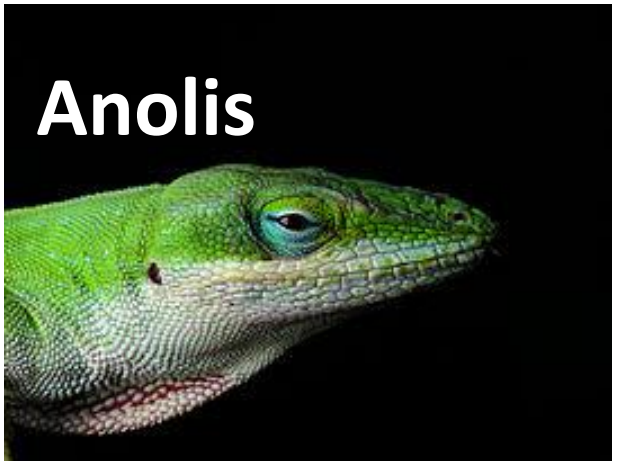
- star-like, modified neurons in trabecules
- association with fenestrated capillaries
- neurosecretory dilatations
- nonvisual photoreception



EMBRYONIC DEVELOPMENT OF EPIPHYSIS

- thickening of caudal part of ependyma that does not contribute to development of choroid plexus at the roof of diencephalon
- neuroectoderm





Parietal eye

THYROID GLAND (GL. THYROIDEA)

- Follicular cells → thyroid hormones (T3, T4)
- **C cells** → calcitonin

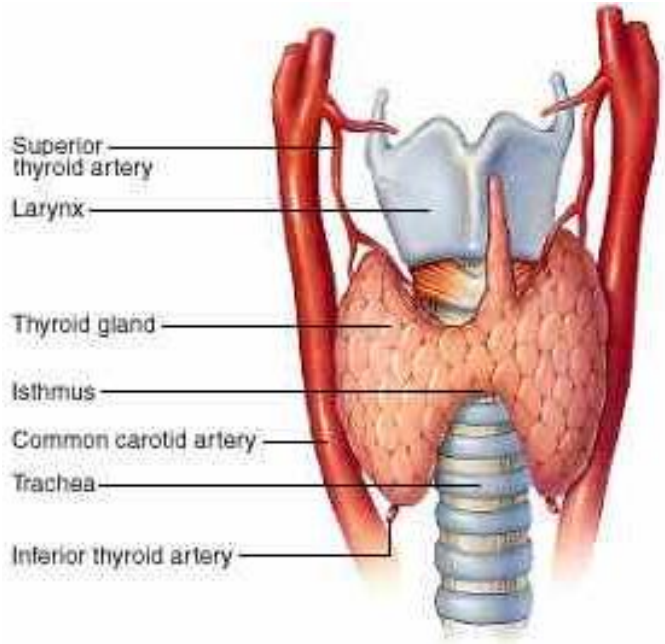
C.t. capsule, septs

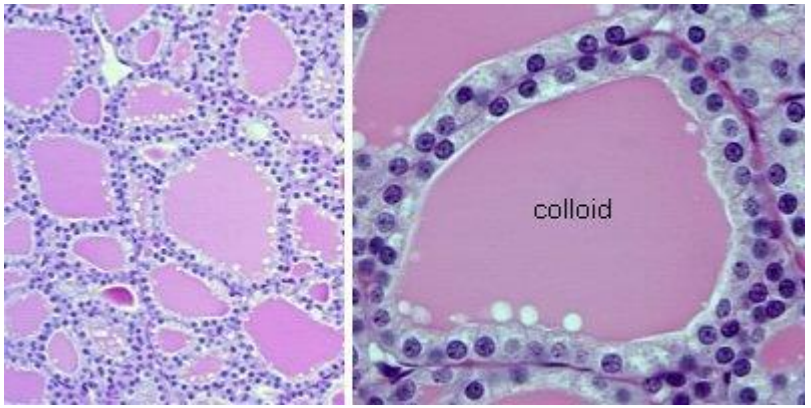
Lobes → lobuli - follicles

Follicles (50 µm -1 mm)

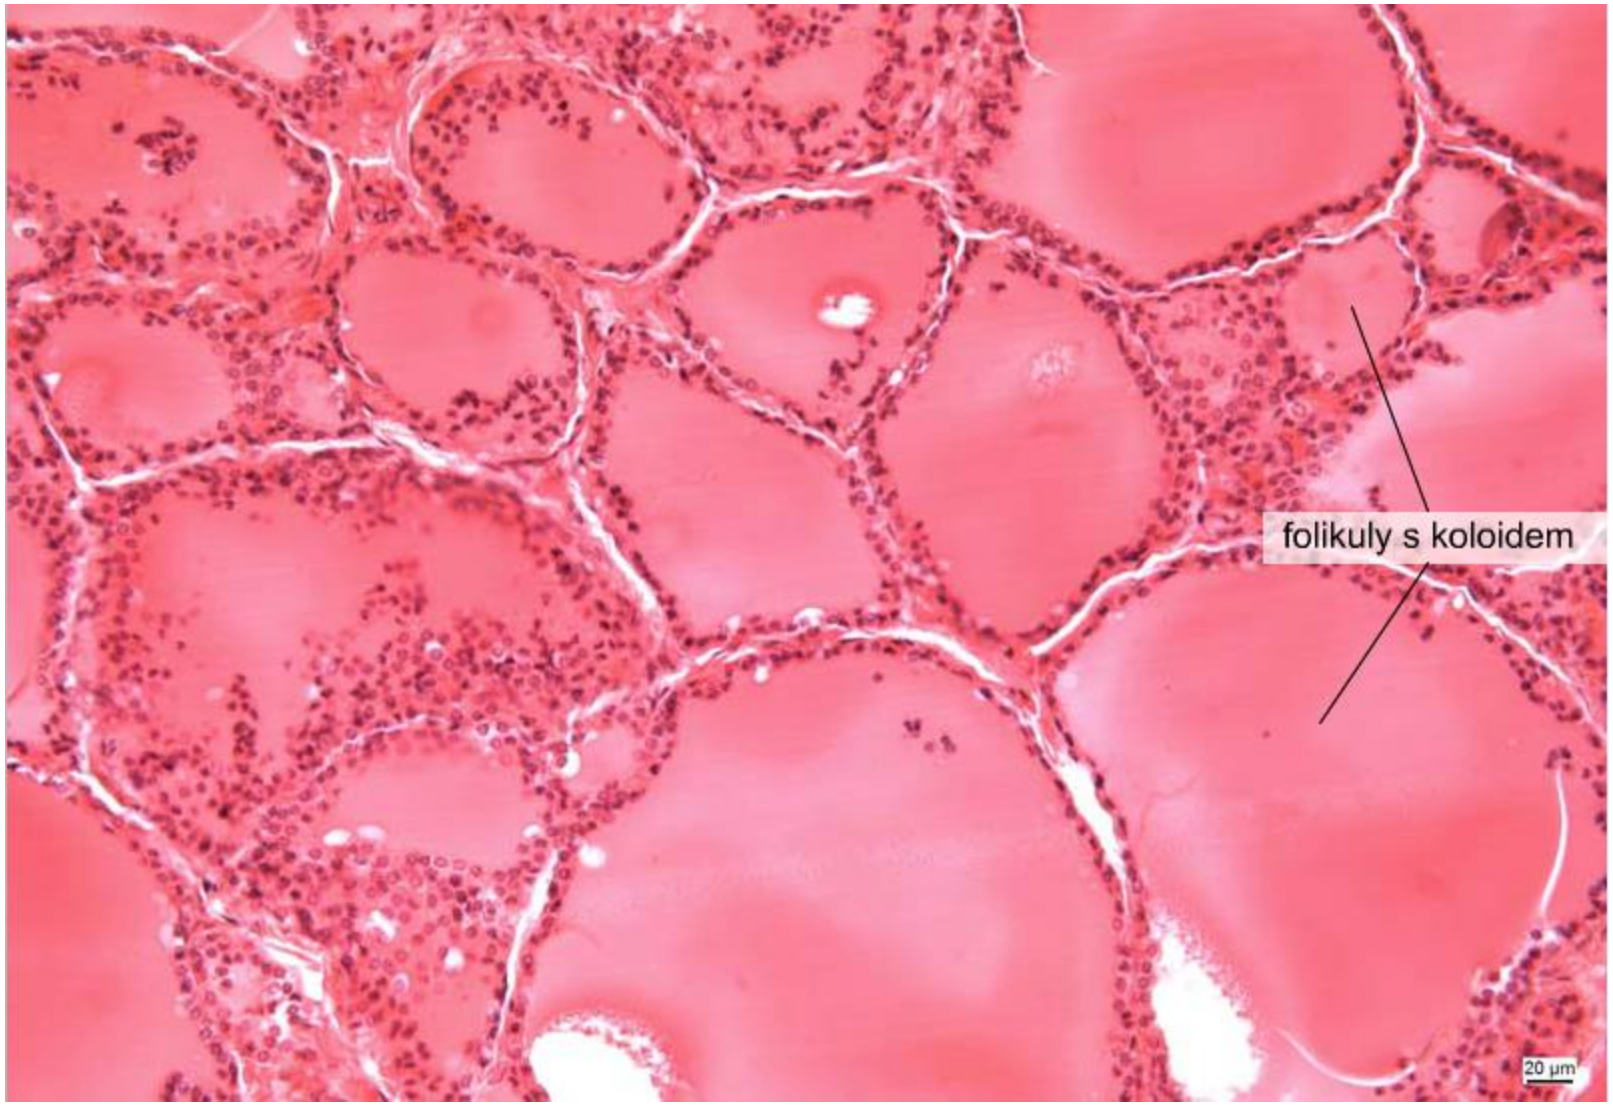
- separated by interstitial loose collagen c.t.
- simple epithelium (flat to cubic, according to their secretory activity)
- colloid

Capillary network from thyroid arteries

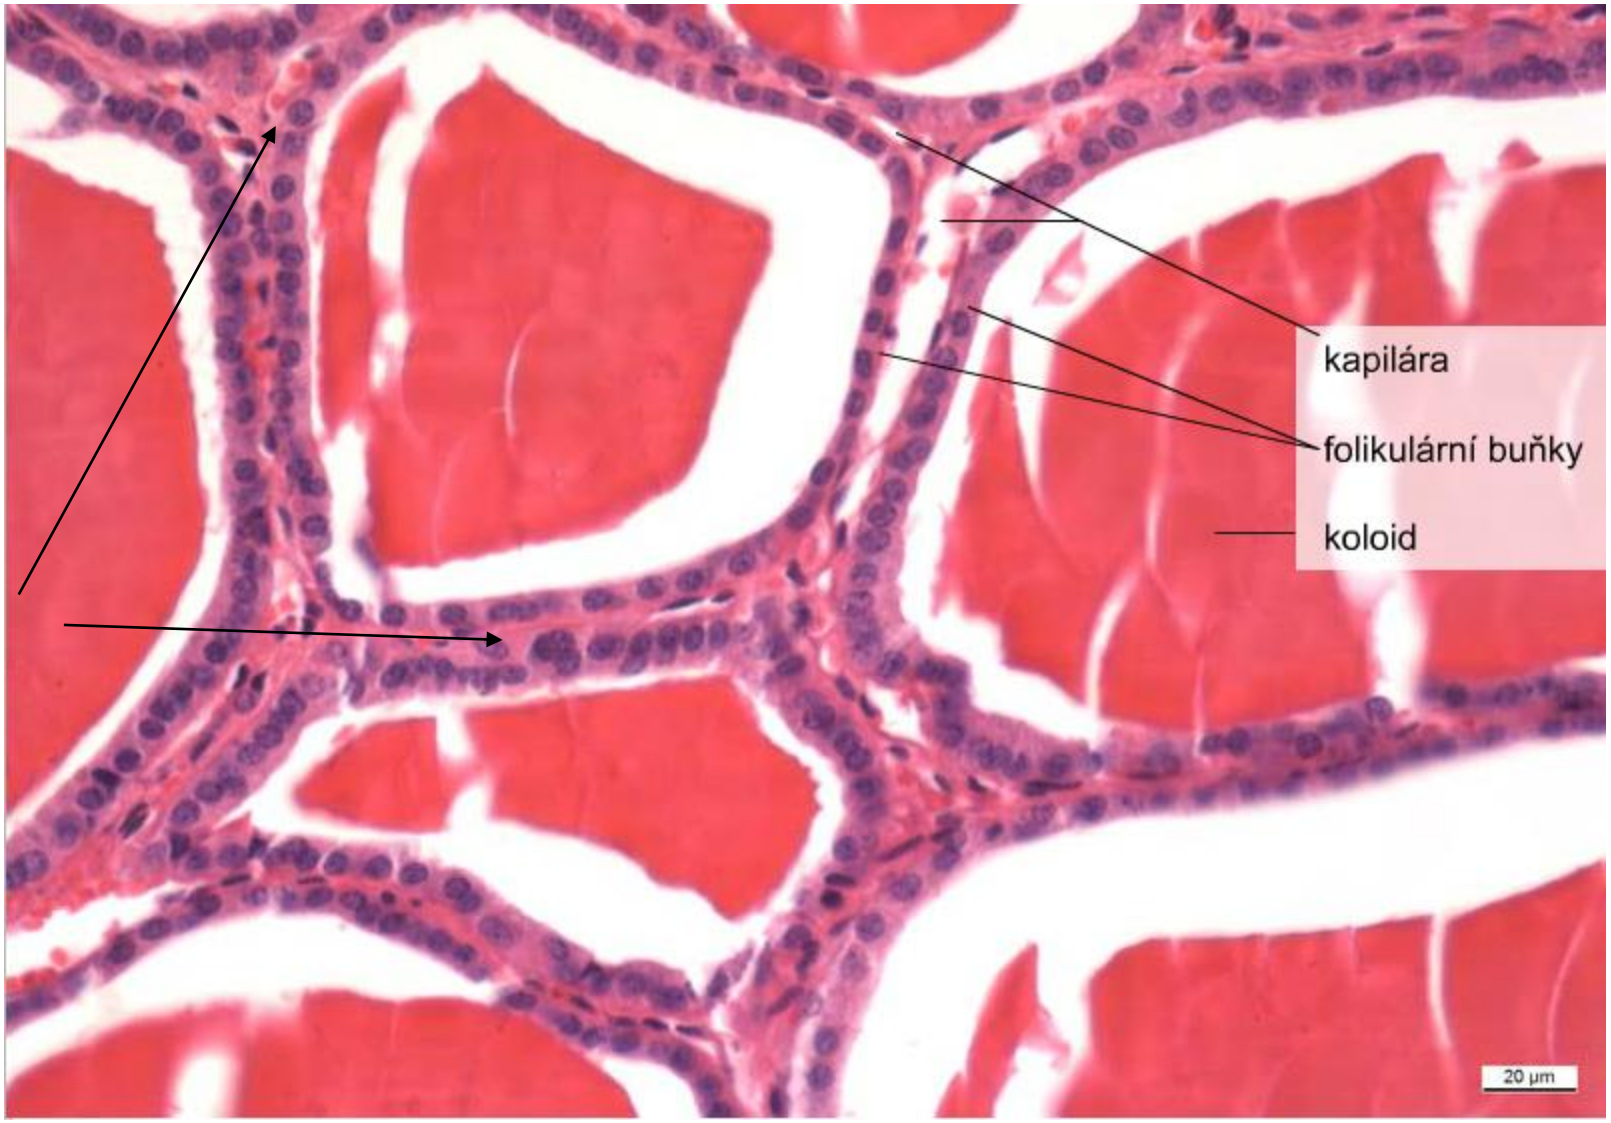




THYROID GLAND - FOLLICLES



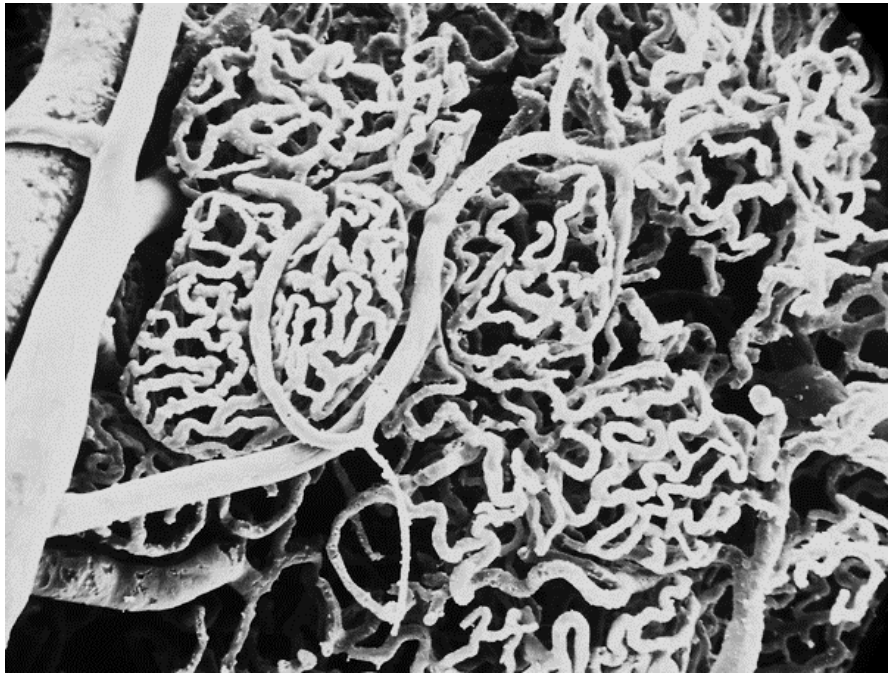
THYROID GLAND - FOLLICLES

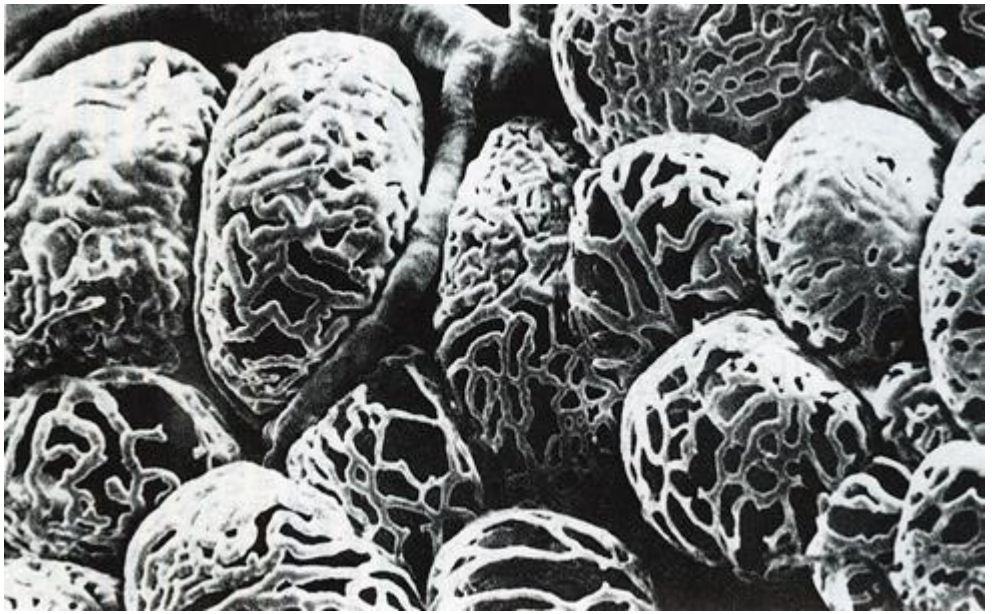


Follicular cells and C-cells (parafollicular)

FOLLICLES OF THYROID GLAND

Capillaries around thyroid follicles





T3 and T4

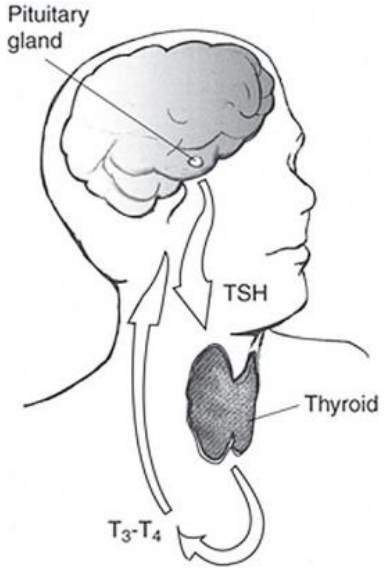
T4 synthesis in thyroid

- sodium-iodide symporter transports two Na+ and one I- across the basement
- I^- is moved across the apical membrane into the colloid of the follicle.
- thyroperoxidase oxidises 2 $I^- \rightarrow I_2$.
- thyroperoxidase iodinates the tyrosyl residues of thyroglobulin
- (TSH) stimulates the endocytosis of the colloidal content
- endocytic vesicles + lysosomes, lysosomal enzymes cleave T_4 from the iodinated thyroglobulin
- exocytosis

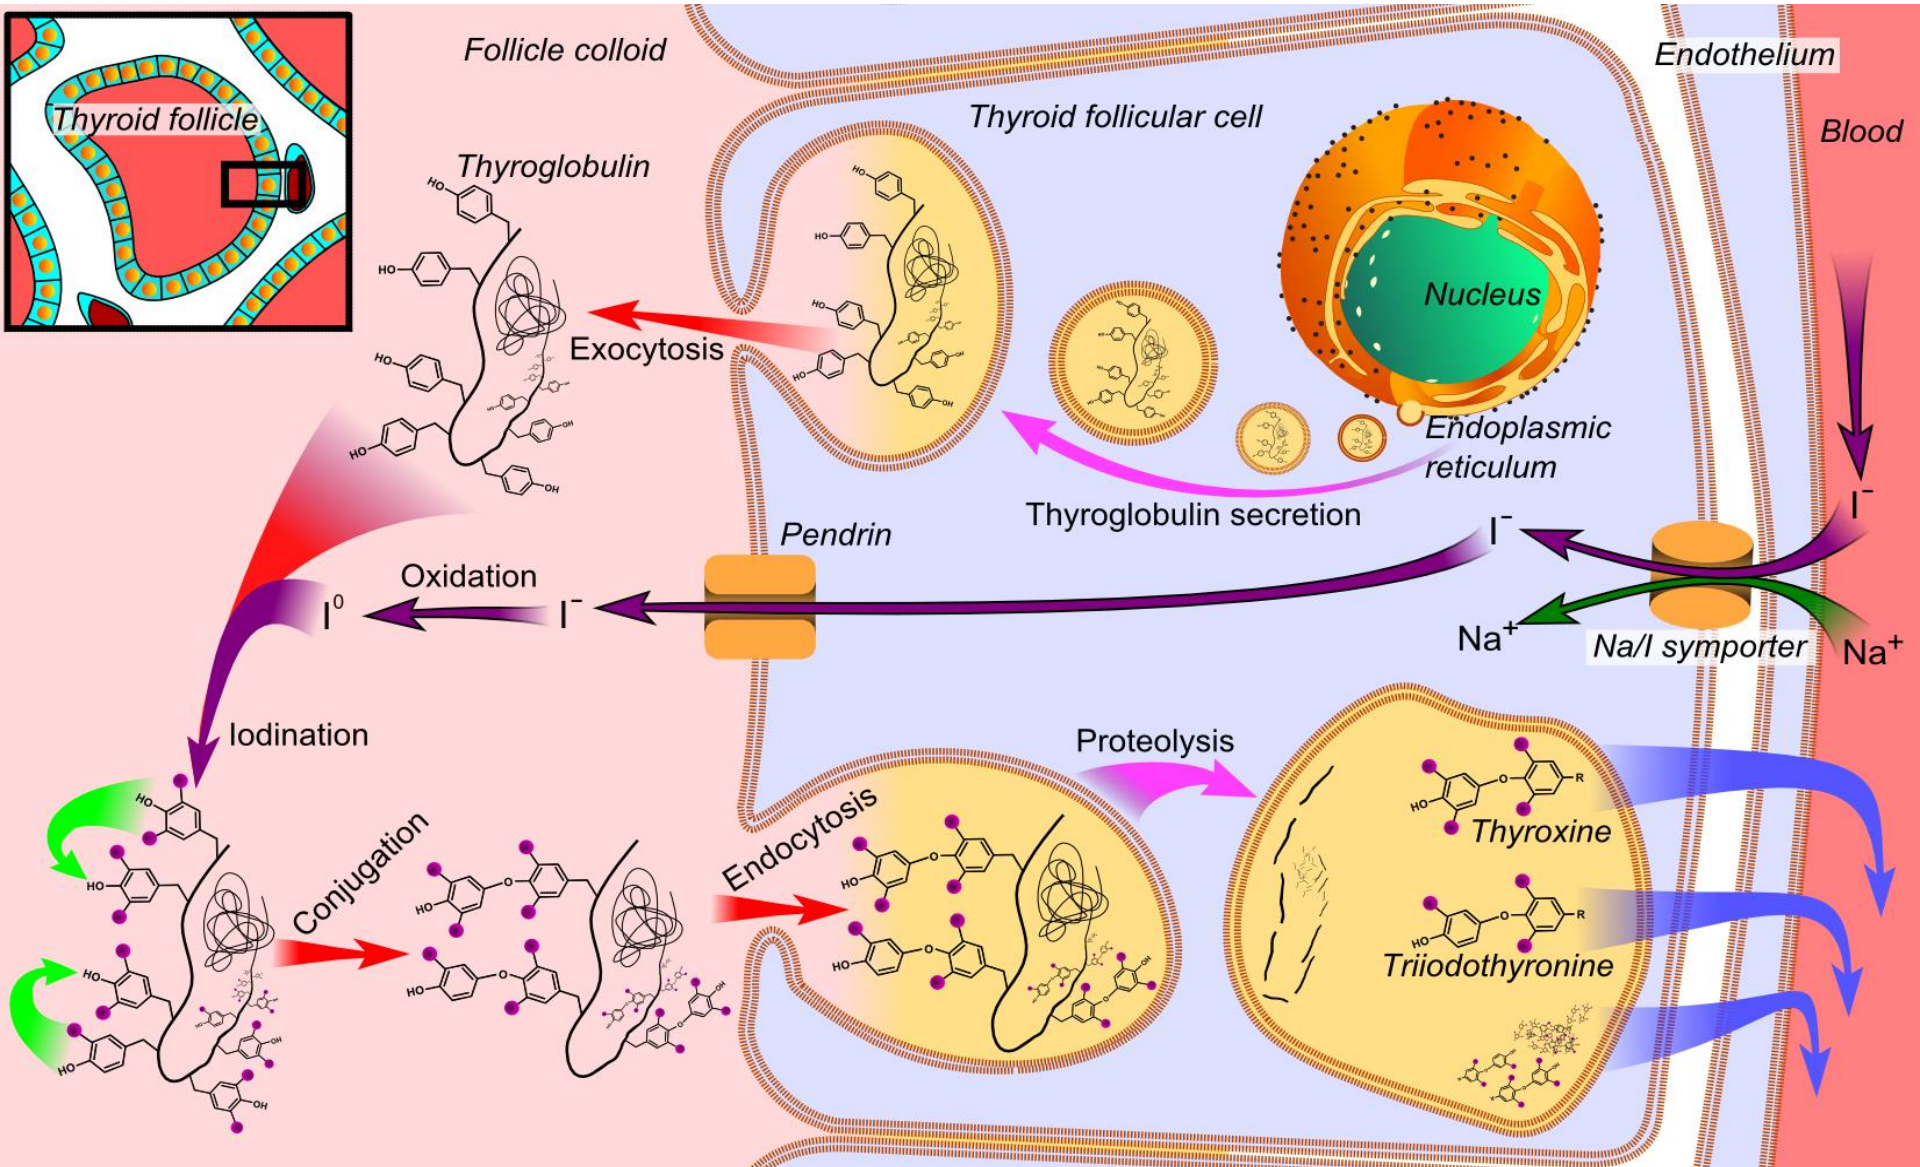
T3 synthesis from T4

- T4 half-life in blood 6.5 days, T3 2.5 (T4 is a reservoir for T3)
- deiodination by tissue specific deiodinase enzymes generates T3

Critical for brain development
Metabolism (nitrogen balance, proteosynthesis, lipolysis)



THYROID GLAND – T3 AND T4 HORMONES



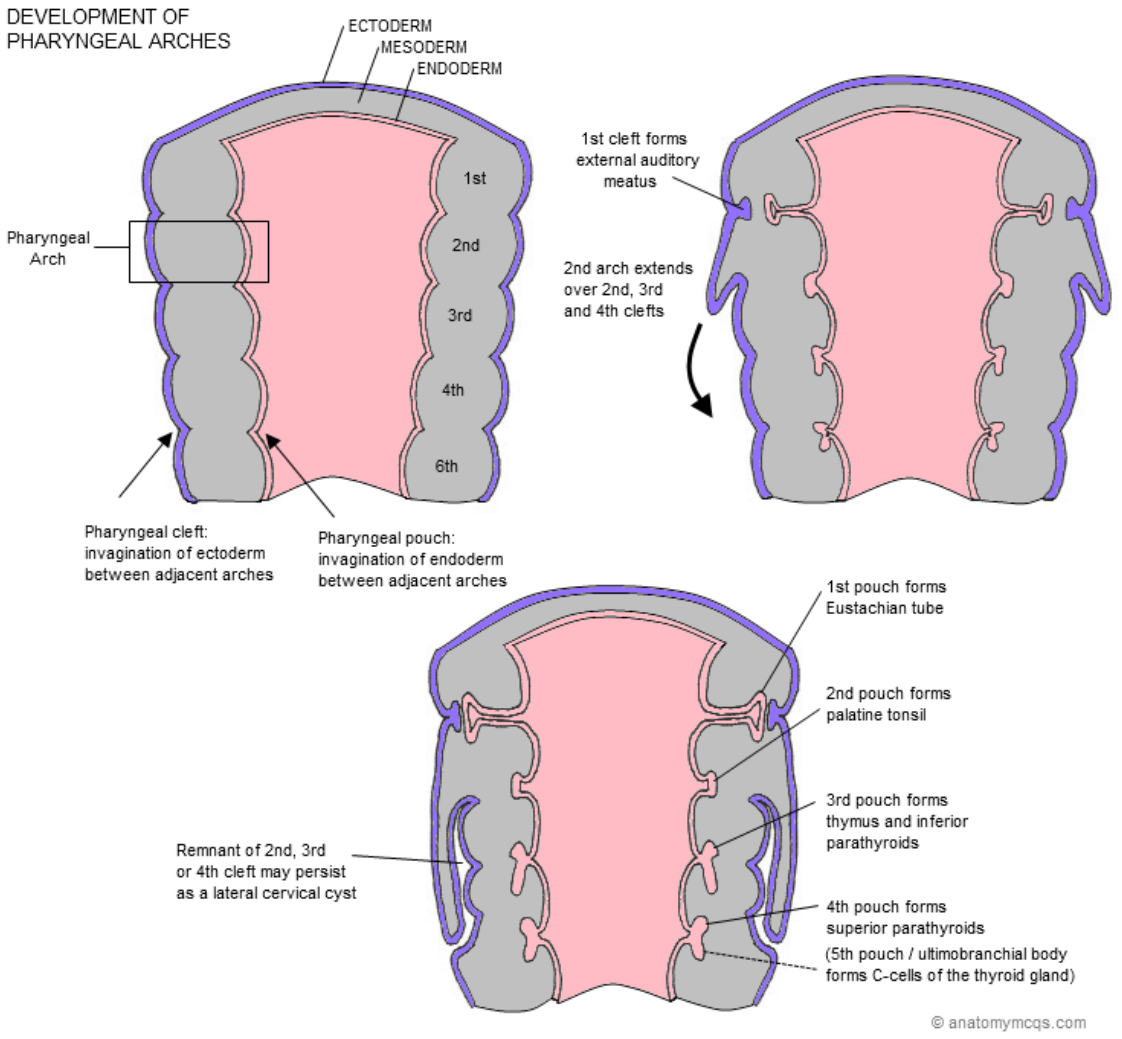
C cells of thyroid

Neuroendocrine cells

- pale staining
- epithelial basis, under basal lamina no contact with colloid
- derived from neural crest
- associate with ultimobranchial body, (derivative of the 4th pharyngeal pouch)

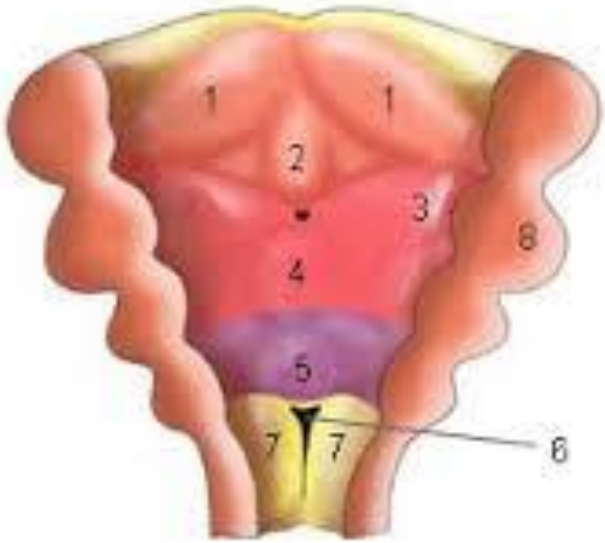
Calcitonin

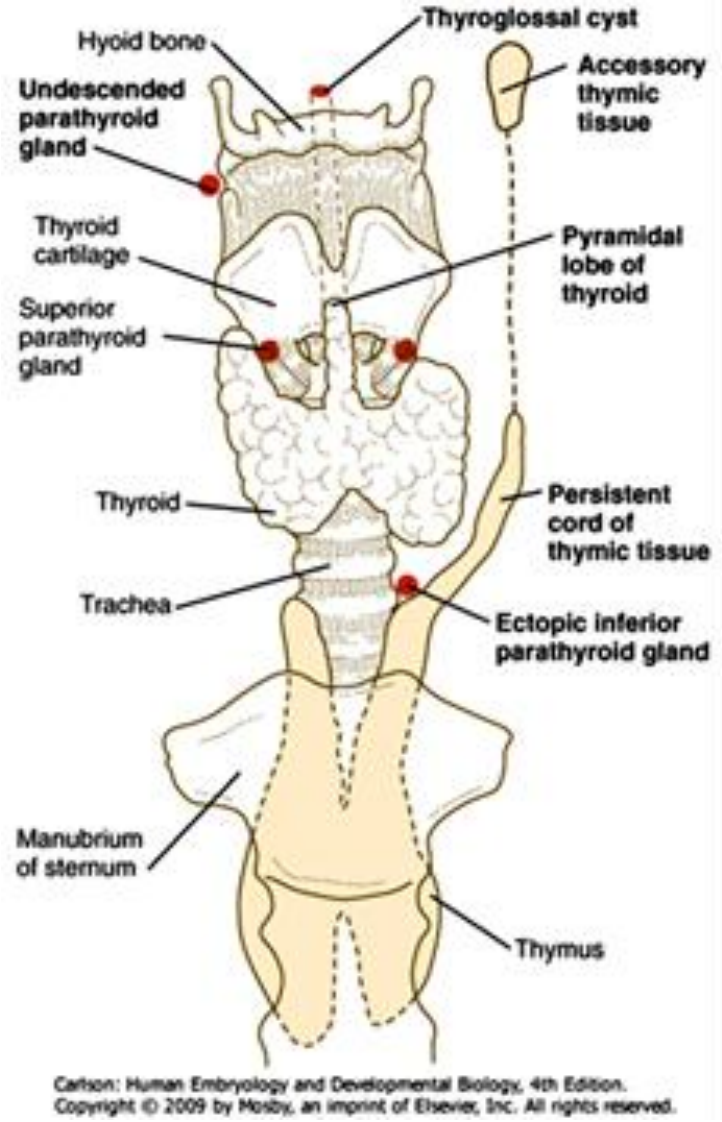
- inhibition of osteoclasts



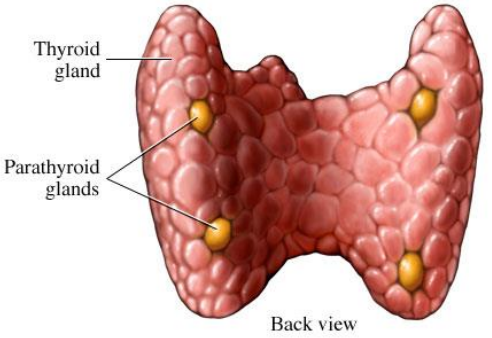
EMBRYONIC DEVELOPMENT OF THYROID GLAND

- endodermal proliferation of pharyngeal floor
- ductus thyreoglossus originates between tuberculum impar and copula
- bilobed civerticulum, lobus pyramidalis
- obliterated d. thyreoglossus – foramen caecum
- ectopic thyroid tissue





PARATHYROID GLAND (GL. PARATHYREOIDEA)



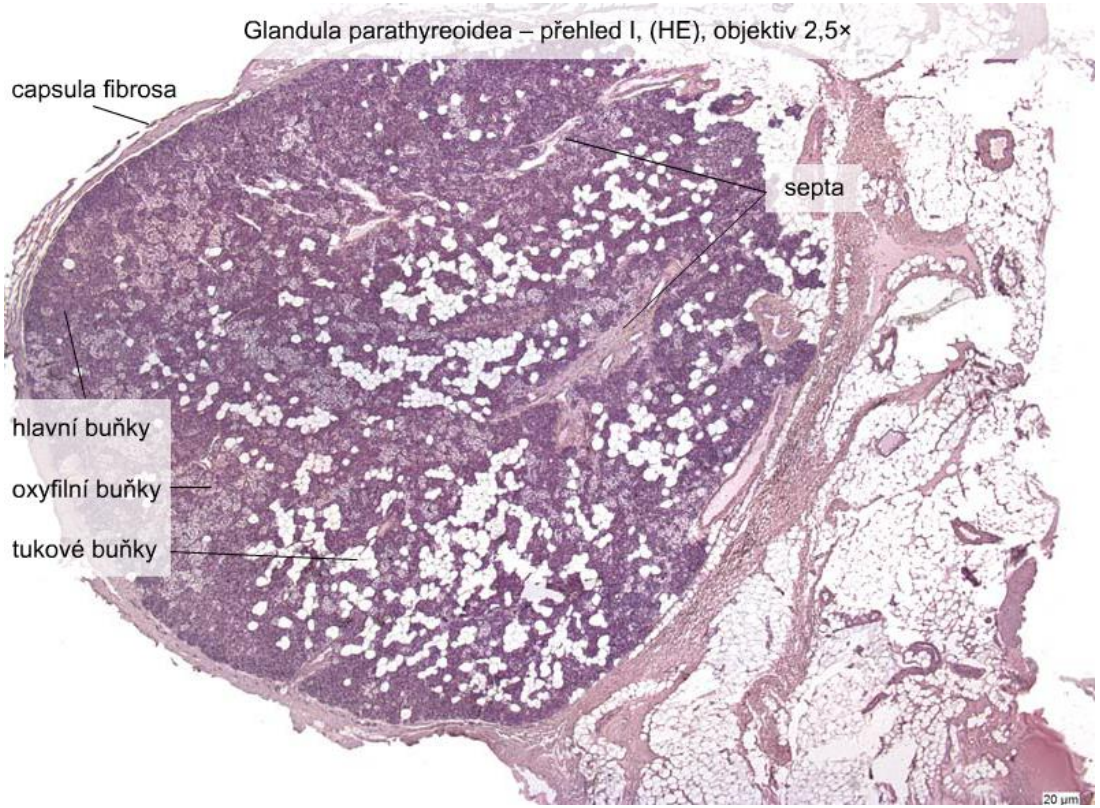
6 mm, 130 mg

c.t. capsule and septs

Capillary network

Cords and clusters of glandular cells

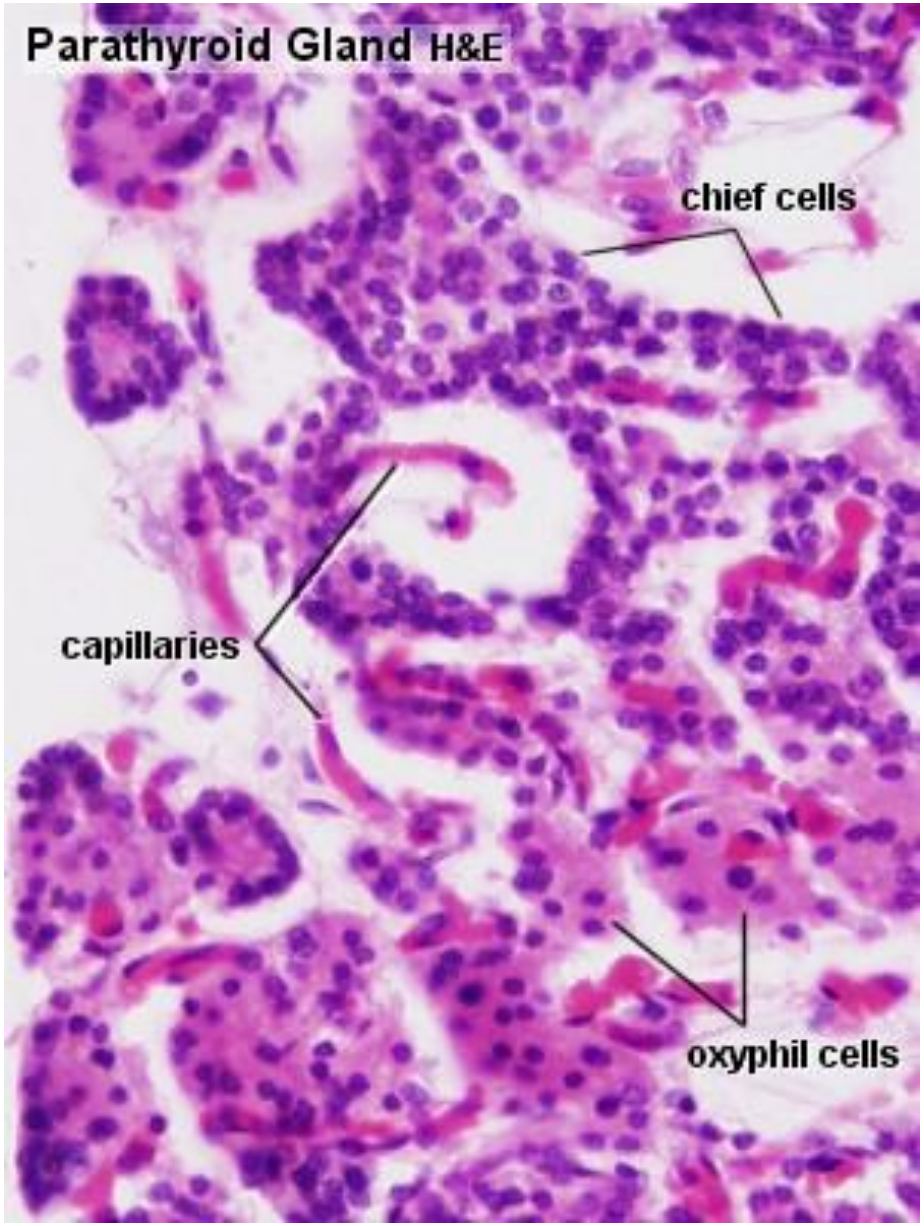
- Chief
- Oxyphilic
- Adipose



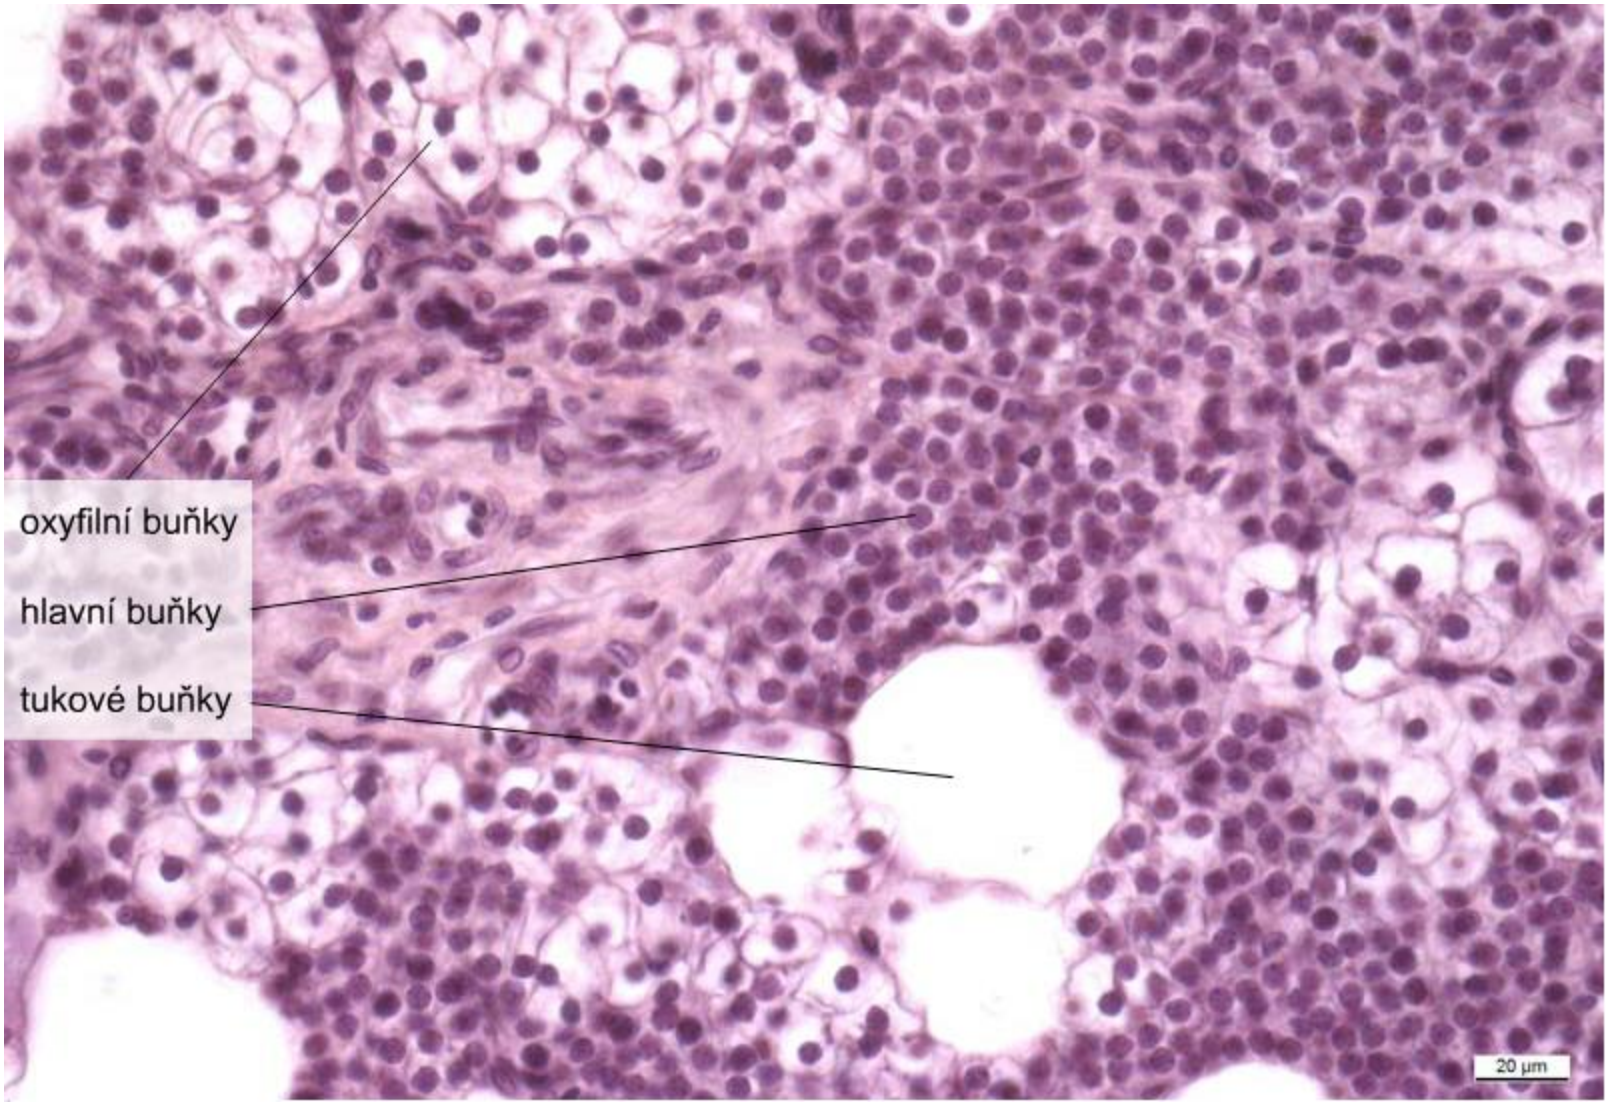
PARATHYROID GLAND (GL. PARATHYREOIDEA)

- **Chief**
  - most abundant
  - small cells (7-10µm, big nucleus
  - mildly acidophilic
  - PTH – calcium metabolism

- **Oxyphylic**
  - large, polyhedral,
  - strongly acidophilic
  - round nucleus
  - glycogen

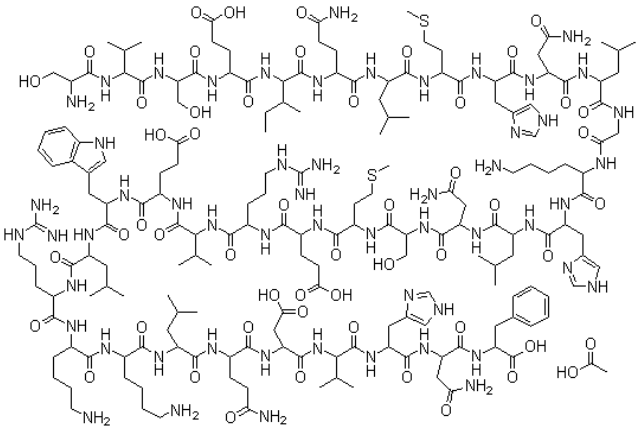


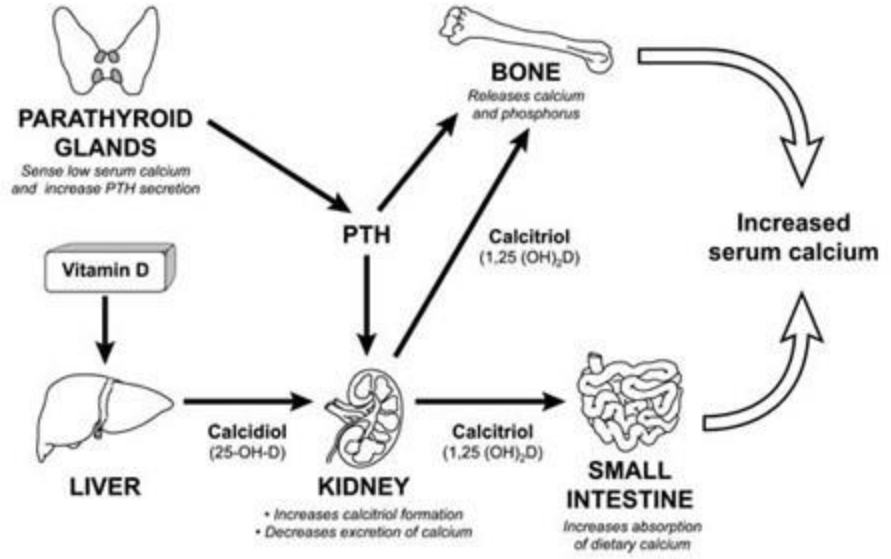
PARATHYROID GLAND (GL. PARATHYREOIDEA)



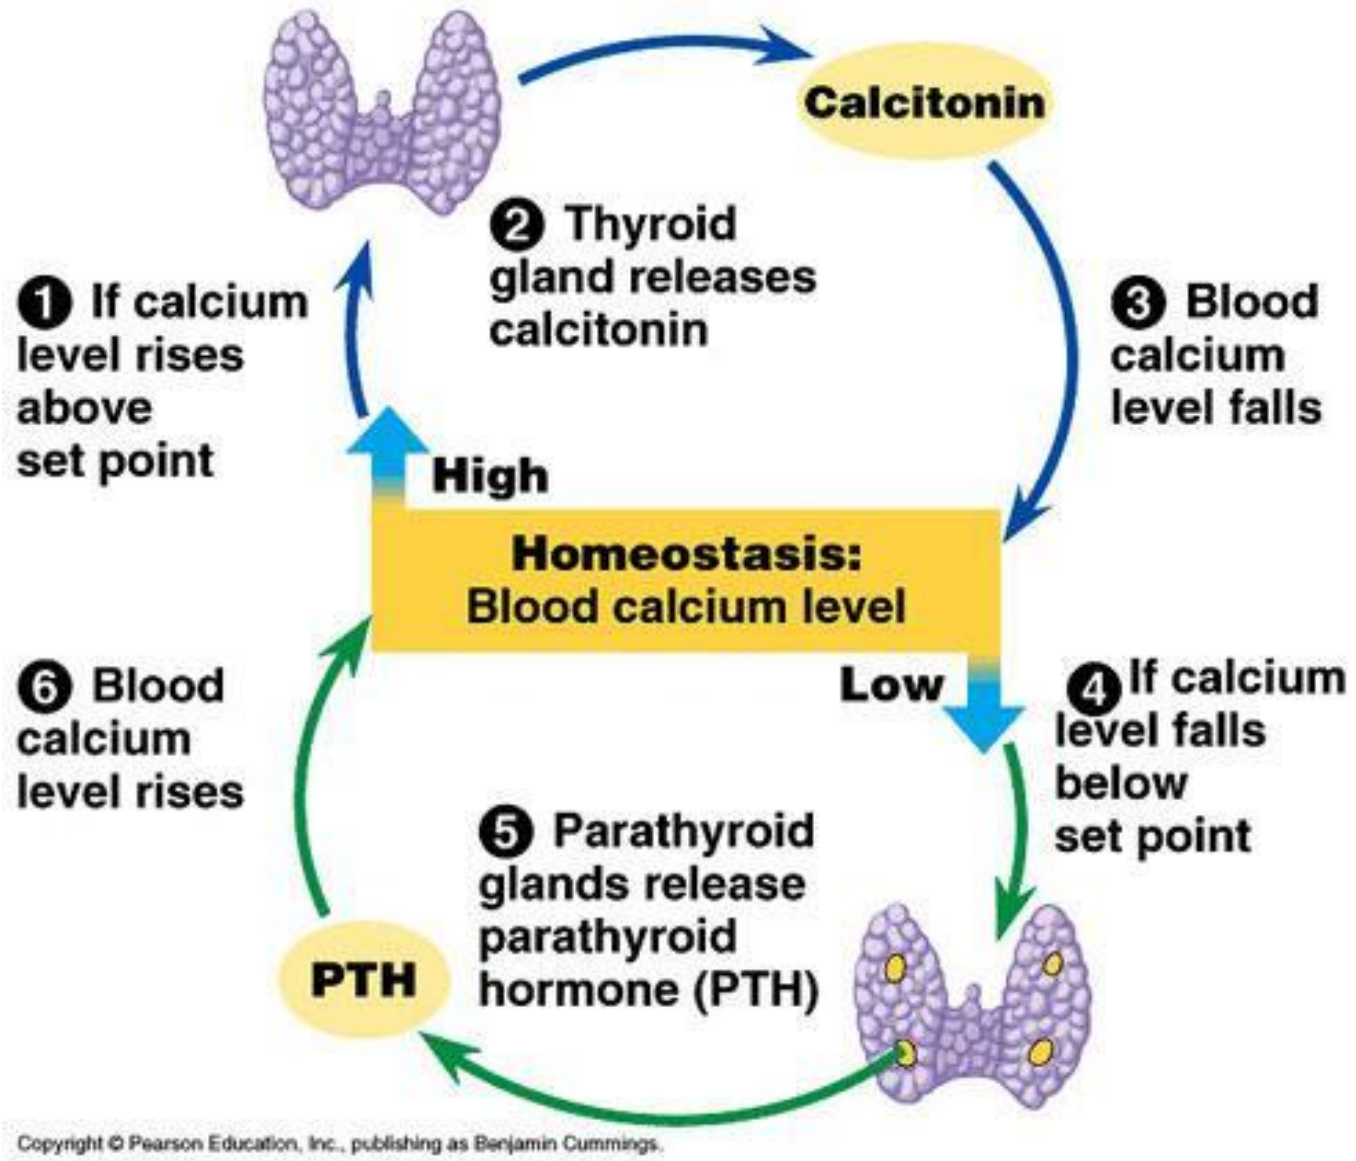
PARATHYROID HORMONE (PTH, PARATHORMONE, PARATHYRIN)

- 84 aminoacids
- stimulates resorption by osteoclasts
- enhances resorption of calcium and magnesium in distal tubules and thick ascending limb
- enhances absorption in the intestine (via vD3)



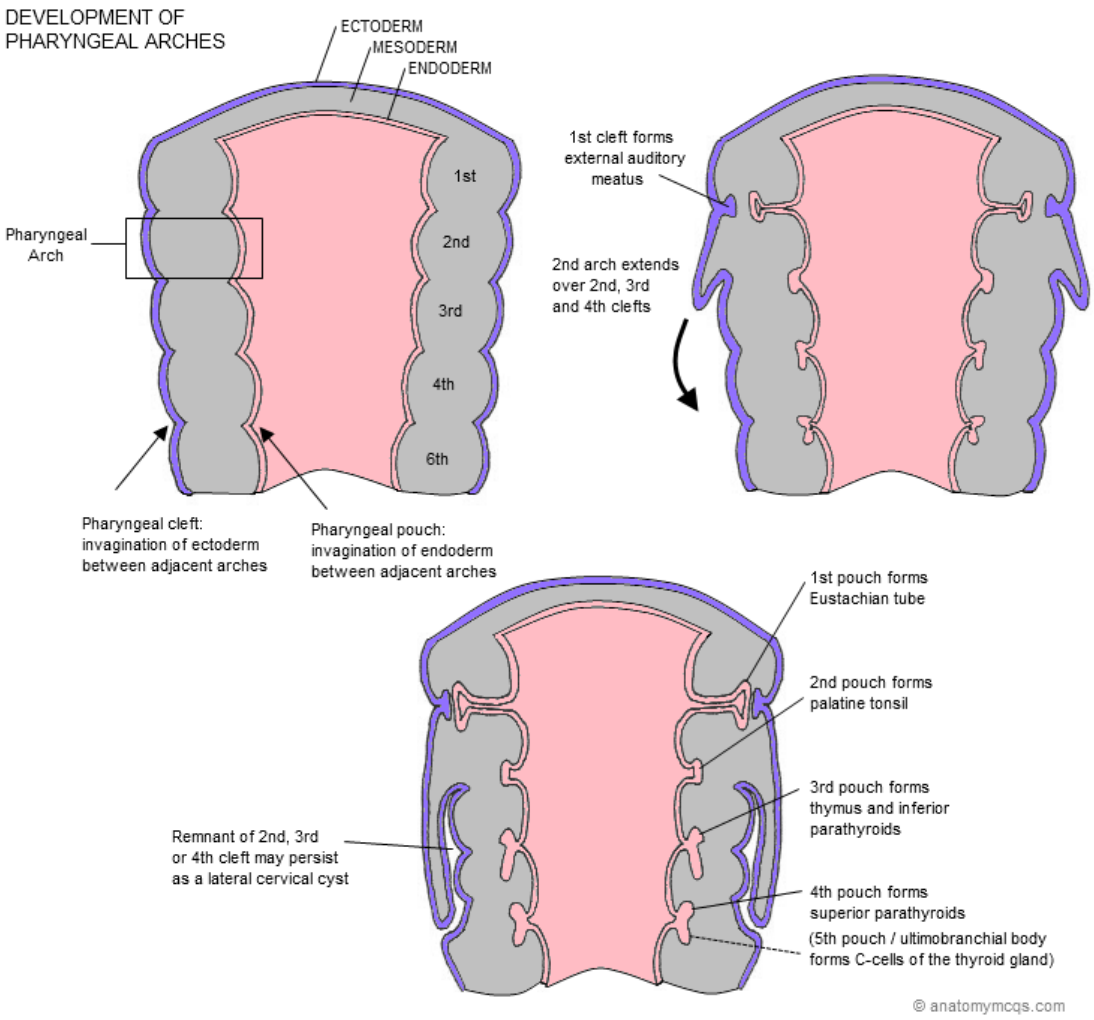


PTH vs. CALCITONIN

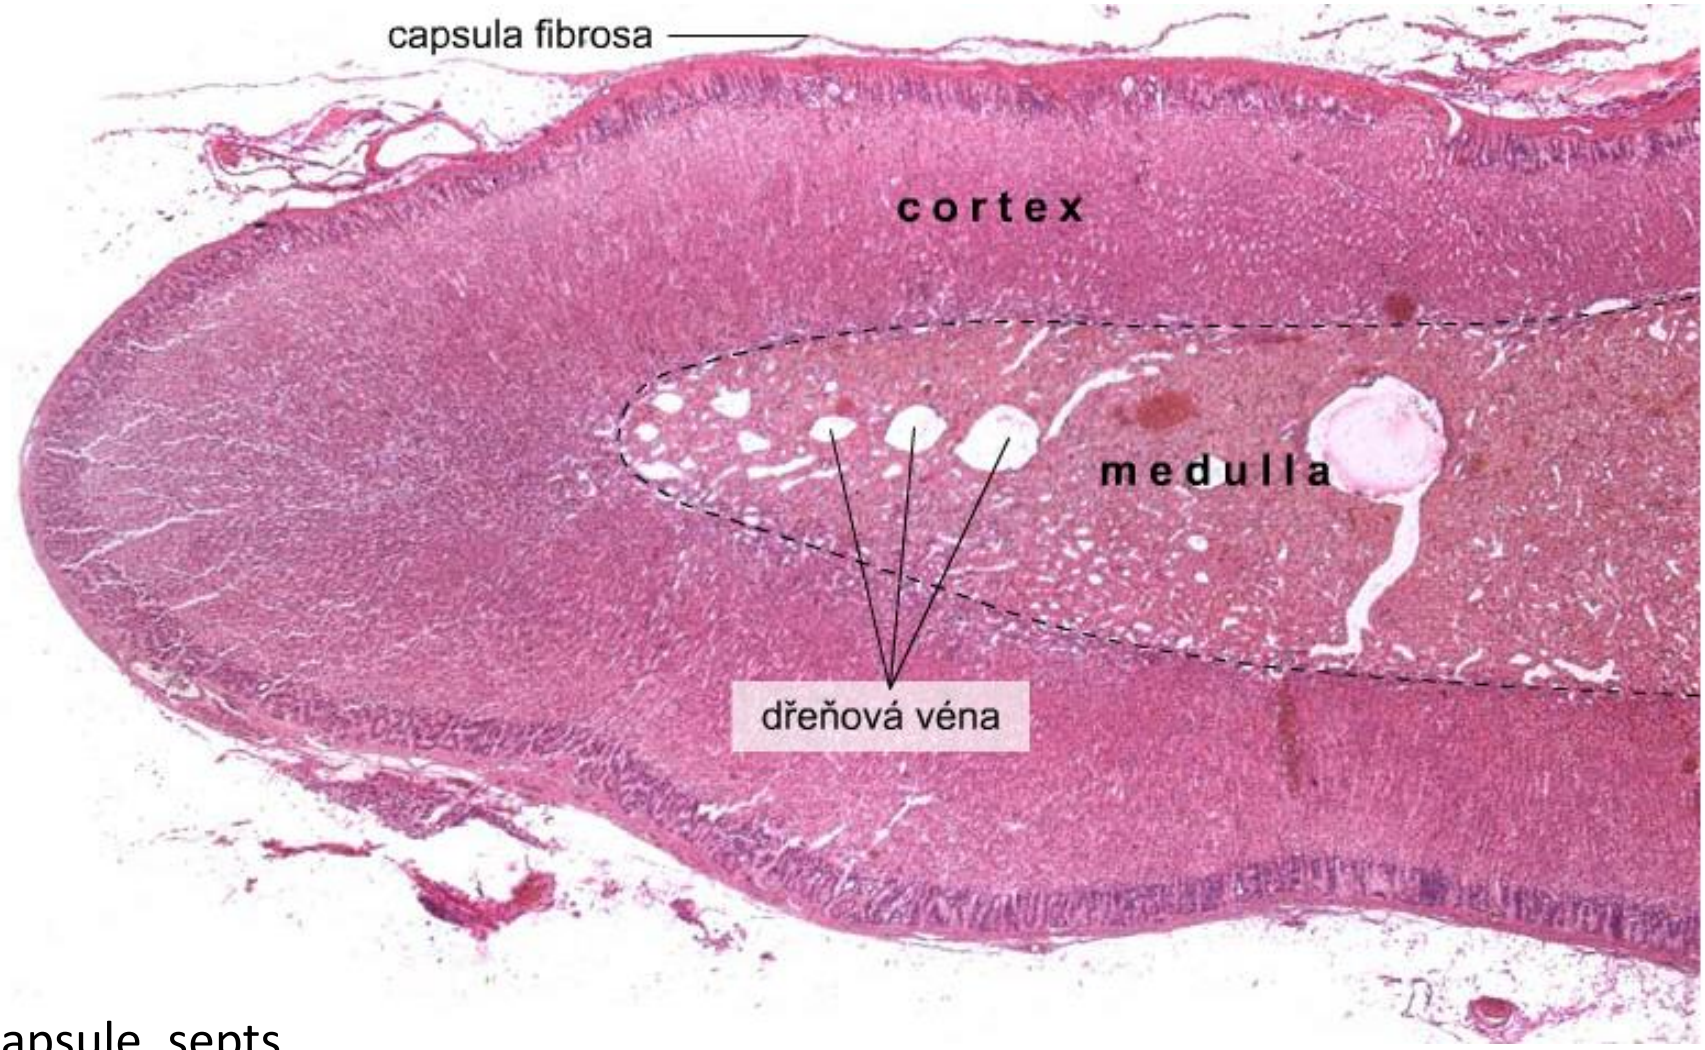


EMBRYONIC DEVELOPMENT OF PARATHYROID GLAND

- *glandulae parathyroideae superiores* from endoderm of **4th pharyngeal pouch**
- *glandulae parathyroideae inferiores* from dorsal process **of 3rd pharyngeal pouch**
- together with thymus descend to lower poles of thyroid
- ectopic PTH gland in thymus or mediastinum



ADRENAL GLAND (*CORPUS SUPRARENALE*)



c.t. capsule, septs

capillary plexus

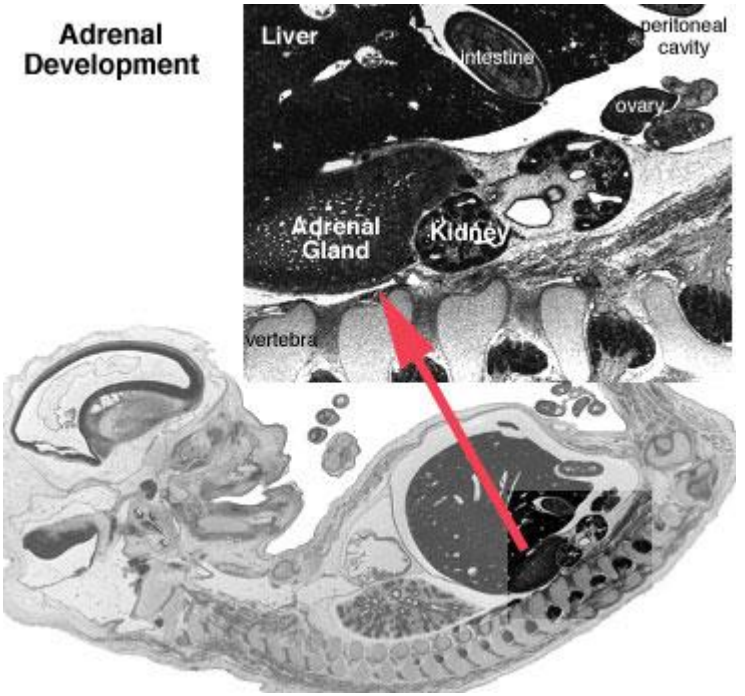
ADRENAL GLAND DEVELOPMENT

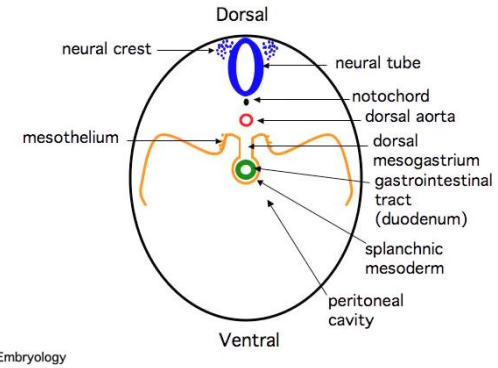
cortex

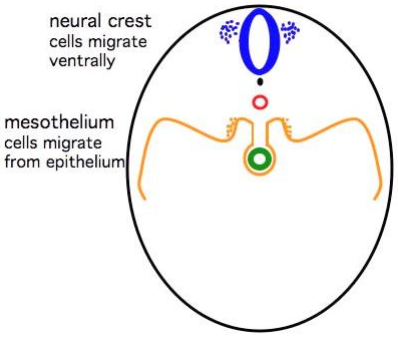
- mesoderm
- mesothelium, coelomic epithelium

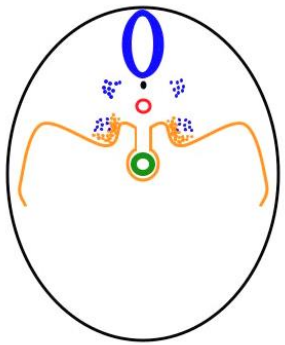
medulla

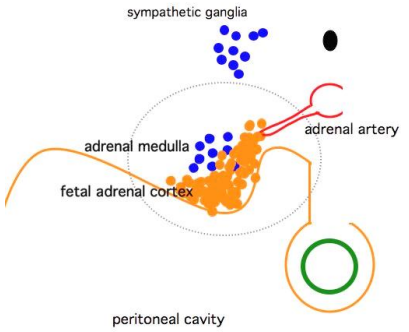
- neural crest











UNSW Embryology

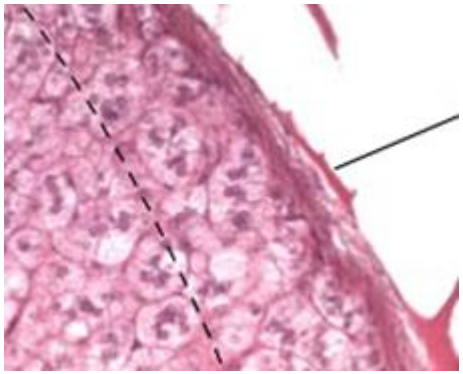
ADRENAL CORTEX

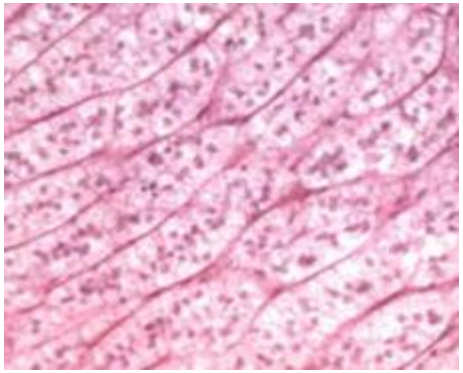
ADRENAL CORTEX

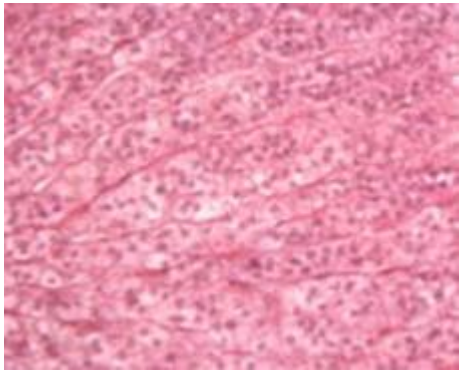
- **Zona glomerulosa (1/10)**
- thin layer under c.t. capsule
- relatively small cells in coiled glomeruli
- not so abundant lipid droplets
- **mineralocorticoids**

- **Zona fasciculata (6/10)**
- radially arranged trabecules
- lipid droplets in cytoplasm
- **glucocorticoids**

- **Zona reticularis (3/10)**
- branched trabecules
- small, acidophilic cells
- lipofuscin
- **androgen precursors**





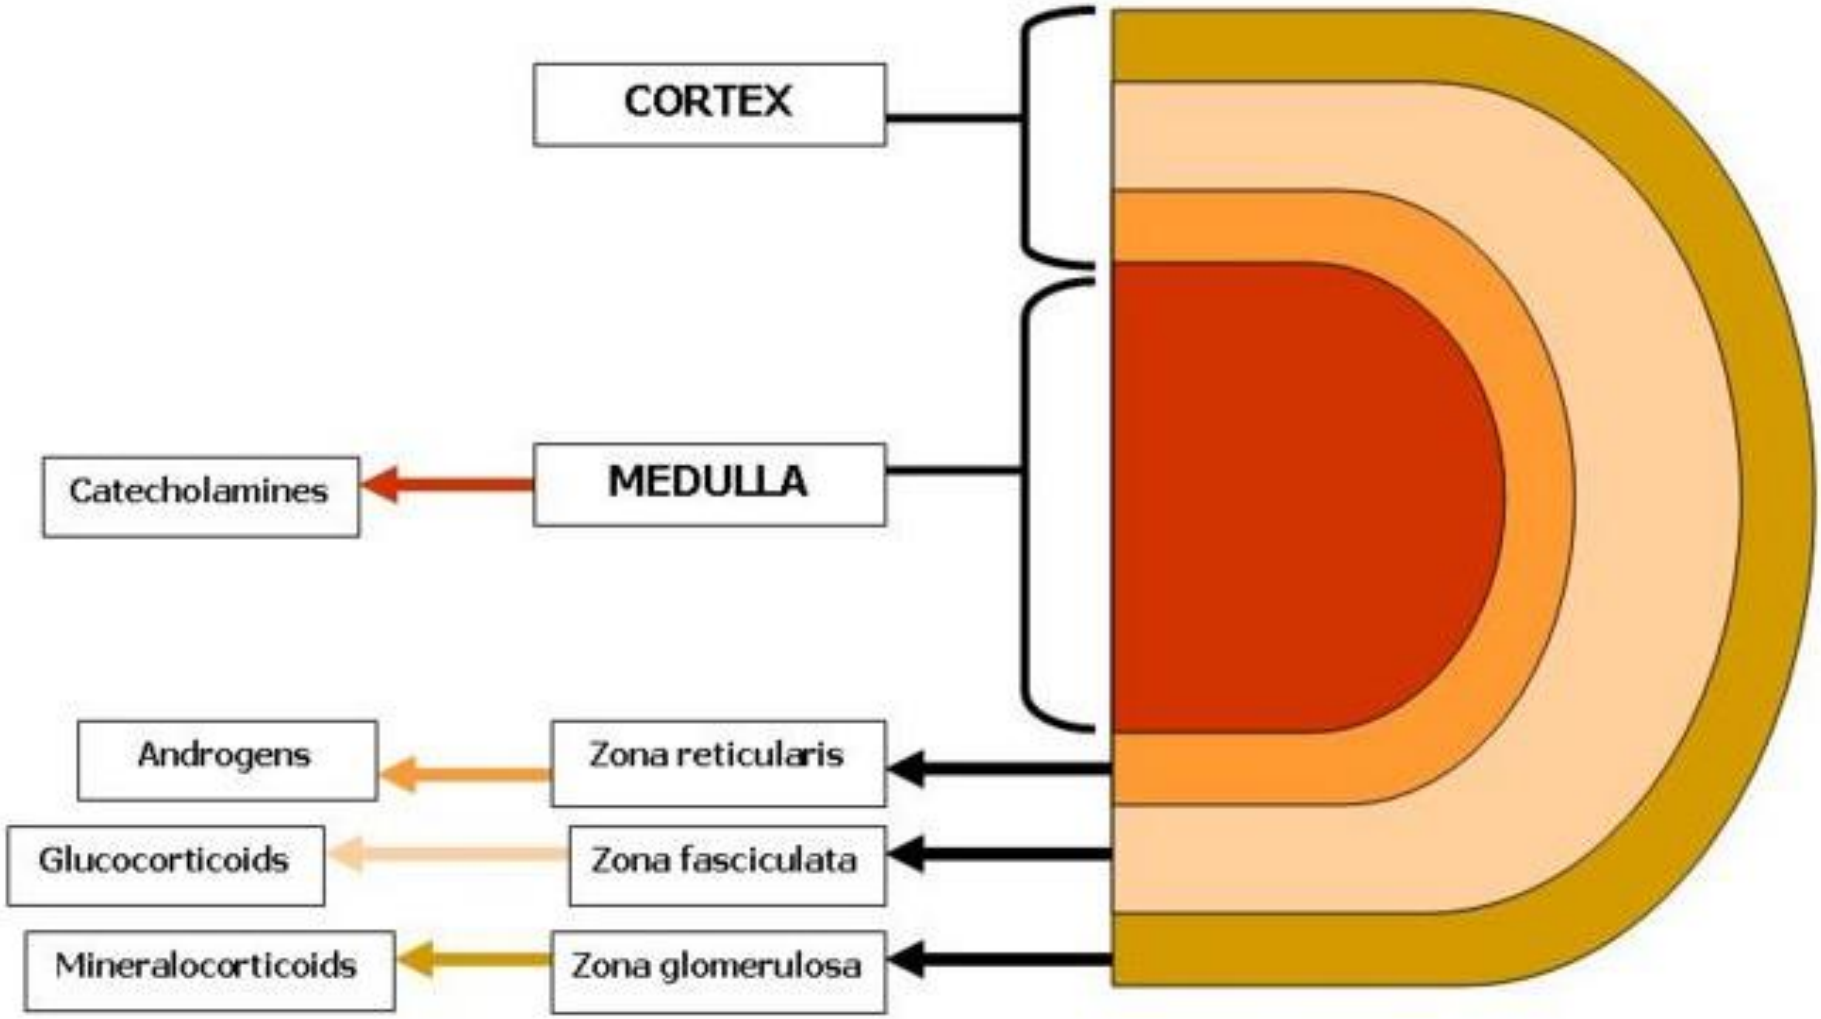


ADRENAL CORTEX HORMONE

- Steroids produced incortex = CORTICOSTEROIDS
- Steroidogenic cells
  - SER, lipid droplets, mitochondria
  - *mineralocorticoids*
  - *glucocorticoids*

- **Aldosteron** – *zona glomerulosa*
- **Cortisol** – *zona fasciculata*
- **Androgens, estrogens**, progesteron – *zona reticularis*

ADRENAL HORMONES



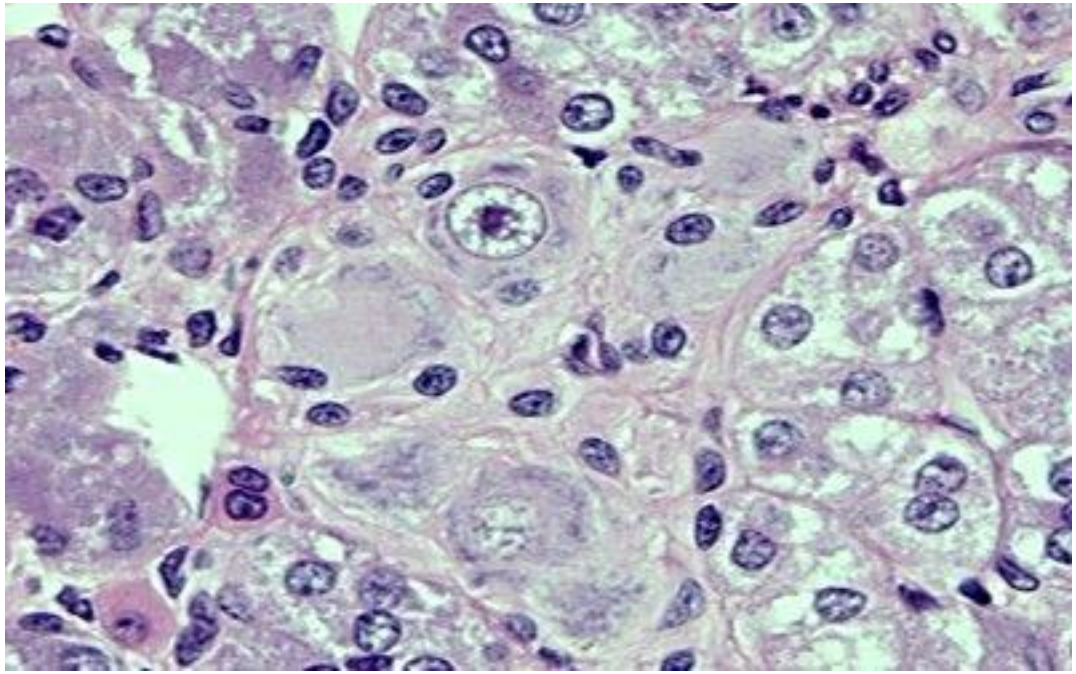
ADRENAL MEDULLA

Clusters of glandular cells in reticular c.t.

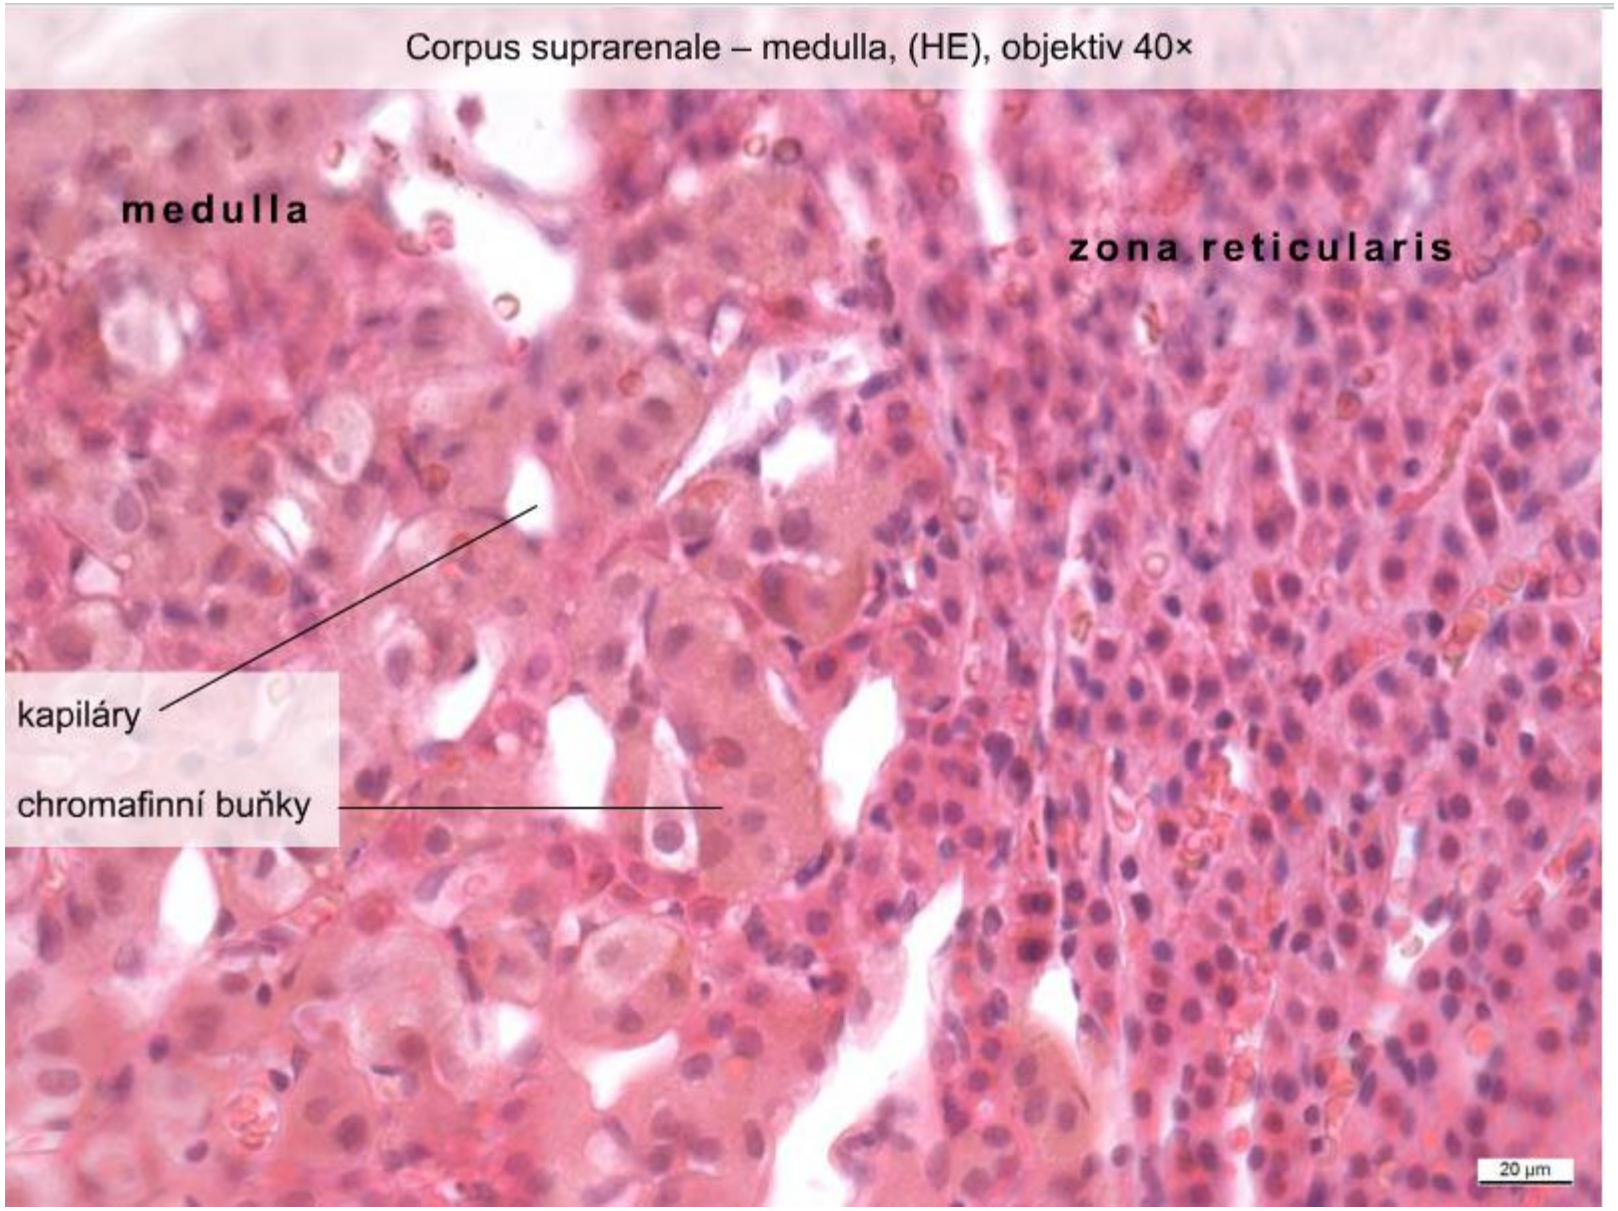
- chromaffin cells – modified postganglionic neurons
- ganglionic cells
- capillaries, venules, nerve fibers

- **adrenaline and noradrenaline**

Neural crest origin



ADRENAL MEDULLA



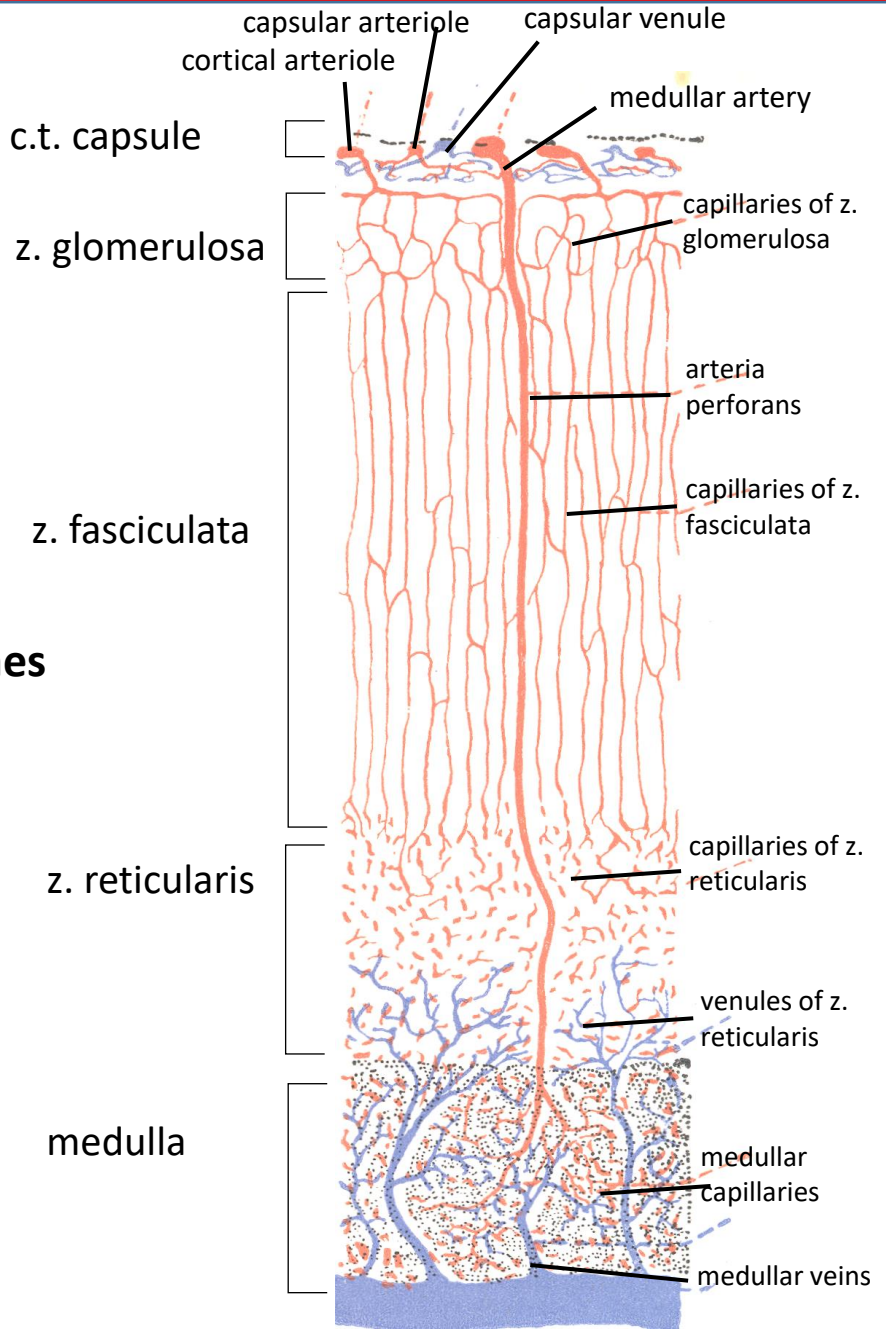
ADRENAL VASCULARISATION

arteriae suprarenales (3) → arterial plexus in cortex under c.t. capsule → radially oriented fenestrated sinusoid capillaries continuous with medullar capillaries → medullar veins → *v. suprarenalis*

→ **Medullary cells influenced by cortical hormones**

three arterial regions

1) c.t. capsule and superior parts of cortex
2) radial capillaries of cortex continuing to medulla
3) medullar capillaries from *aa. perforantes*



Adrenal hormones

Region (zone)		Hormone	Target tissue	Hormonal effect	Control
Cortex	Zona glomerulosa	Mineralocorticoids (aldosteron)	Kidney	Increaed renal reabsorption of Na+ and water Synergic to ADH Excretion of K^+	renin-angiotensin system, high level of K^+ low level of Na^+
	Zona fasciculata	Glucocorticoids (hydrocortison)	Most cells	Release of aminoacids from muscles and lipids from fat tissue, peripheral utilization of lipids, antiinflammatory effects	Stimulation by ACTH
	Zona reticularis	Androgens (dehydroepiandrosterone)	Most cells	In adult males not significant Children and women growth of bones, muscles, hematopoiesis	Stimulation by ACTH
Medulla		Epinephrine, norepinephrine	Most cells	Increased heart activity, centrlaization of circualtion, bronchodilatation, glycogenolysis, regualtion og glycemia	Sympaticus

STRESS

Hypothalamus ← STRESS → **CNS** (sympaticus)

Pituitary gland

ACTH

Adrenal cortex

Cortisol

- glycogen lysis
- stabilization of glucose levels
- suppression of immune system

Chronic stress

Adrenal medulla

Adrenaline

- blood pressure, vasoconstriction, heart rate…

Fight or Flight

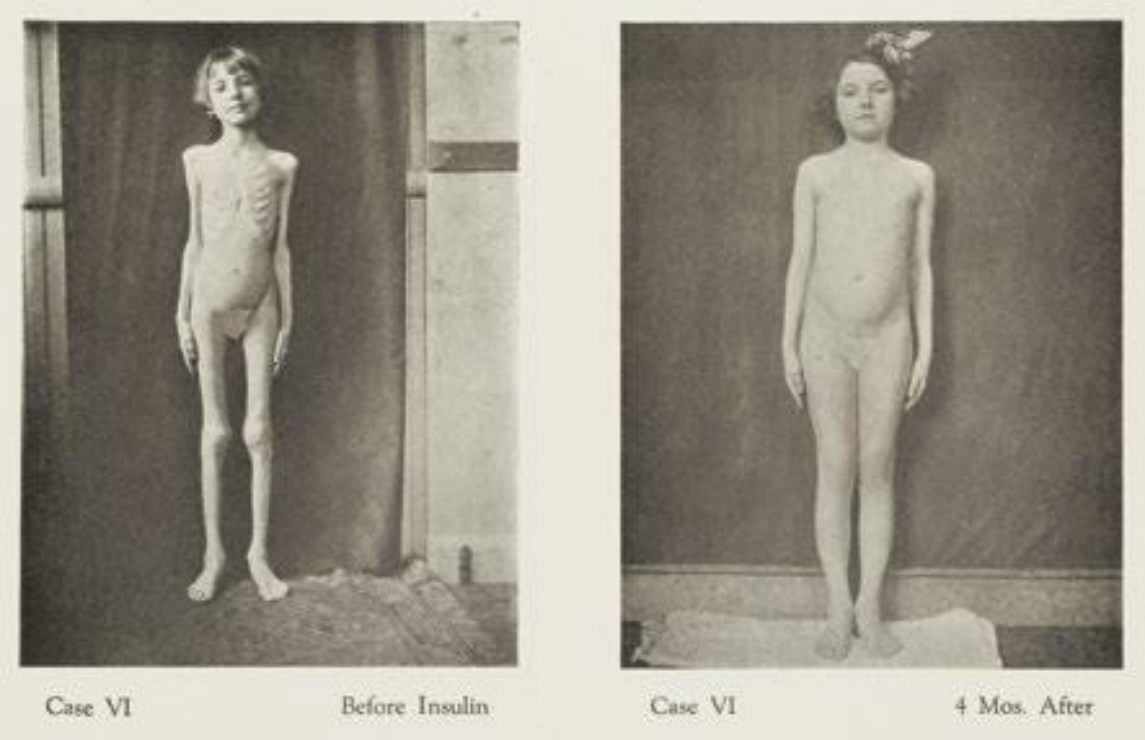
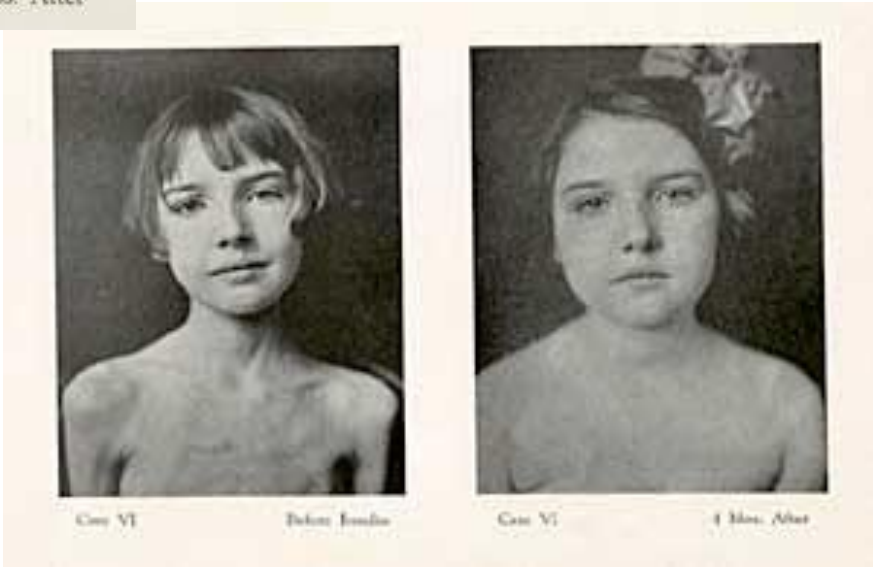
Ab-anti glukagon –Texas Red

STORY OF INSULIN



Photographed in 1922, this diabetic girl, aged 13, weighed just 45lb before treatment with insulin. A few months later she had made a dramatic recovery. Wellcome Library London, CC BY.



On July 27, **1921**, Sir Frederick Banting and Charles Best succeeded in isolating insulin from canine pancreases and thereby discovered the first effective treatment for diabetes mellitus.

Laguesse E. Sur la formation des ilots de Langerhans dans le pancreas. Comptes Rend SocBiol **1893**;5 (Series 9k.819-20
