

## Theoretical Bases of Clinical Medicine 2-3

### Learning outcomes

TBL LESSON: 07 Magda Bacáková – Breast Cancer [Tereza Vafková]

Upon completion of this instructional unit, the student will be able to:

- describe and demonstrate breast self-examination on a breast model
- explain the general principles of preventive screening
- describe the screening program for breast cancer
- list the symptoms of breast cancer
- propose examinations necessary for the diagnosis of breast cancer
- explain how histological findings influence the prognosis of oncological diseases
- communicate with a patient who seeks advice and guide them to seek professional help
- create a simple genogram based on the patient's family history
- recognize the extent of their responsibility, and thus not exceed their level of knowledge or skills, and to remain under professional supervision for any medical procedure they perform
- recognize types of venous access in oncology and their indications
